Alkmim, 2016-12-05 The region of the S o Francisco river valley in eastern Brazil encompasses two main components of the geologic framework of the South American continent the S o Francisco craton and its marginal orogenic belts Cratons as the oldest differentiated and relatively stable pieces of the continental lithosphere preserve a substantial part of the Earth s memory Orogenic belts on the other hand record collisional processes that occurred during a limited time span Because of their topographic relief mountain belts developed along craton margins provide however access to rock successions not exposed in the low lands of the adjacent cratons The combination of geologic information obtained in cratonic domains and their marginal orogenic belts thus form the basis for deciphering substantial periods of Earth s history Corresponding to the most intensively studied portion of the Precambrian nucleus of the South American plate the S o Francisco craton and its margins host a rock record that spans from the Paleoproterozoic to the Cenozoic Precambrian sedimentary successions that witness ancient Earth processes many of them of global significance are especially well preserved and exposed in this region With all these attributes the S o Francisco craton together with its fringing orogenic belts can be viewed as a continent within a continent or a continent in miniature The Nature of Magmatism in the Appalachian Orogen A. Krishna Sinha, Joseph Bruce Whalen, John P. Hogan, 1997-01-01 The thermal evolution of mountain belts is recorded in the distribution origin and ages of magmatism In this volume petrologic isotopic and geochemical evidence is presented to highlight the contribution of igneous rocks to the evolution of the Appalachian Orogen in both Canada and the United States These papers emphasize the use of modern geochemical and petrologic data to discriminate the sources yielding magmas and thus the nature of the crust and mantle Tectonics and Magmatism in Turkey and the Surrounding Area Erdin Bozkurt, J. D. A. Piper, J. A. Winchester, 2000 Containing 23 papers from a range of international contributors this volume describes recent research into the tectonics and magmatism of Turkey and its surroundings This region is sited at the collision zone between Eurasia and Afro Arabia and as such provides an extraordinarily complete and well exposed record of the staged tectonic evolution of this sector of the Alpine Himalayan
