Applications of Superconductivity H. Weinstock, 2013-03-09 This book in essence the proceedings of a NATO Advanced Study Institute with the same title is designed to provide in depth coverage of many but not all of the major current applications of superconductivity and of many that still are being developed It will be of value to scientists and engineers who have interests in the research and production aspects of the technology as well as in the applications themselves The first three chapters by Clarke Vrba and Wikswo are devoted to an understanding of the principles fabrication and uses of SQUID magnetometers and gradiometers with the greatest emphasis on biomagnetism and nondestructive evaluation NDE For the most part traditional low temperature superconductor LTS SQUIDs are used but particularly for NDE high temperature superconductor HTS SQUIDs are proving useful and often more convenient The succeeding three chapters by Przybysz Likharev and Chaloupka cover broader aspects of superconducting electronics The first two of these deal primarily with digital L TS circuits while the third discusses in great detail passive component applications using HTS materials Currently HTS filters are undergoing intense J3 site testing at cellular telephone base stations While it is clear that HTS filters outperform conventional filters in reducing signal loss and allowing for more channels in a given bandwidth it isn't yet certain that the cellular telephone industry sees sufficient economic benefits to make a firm decision to use HTS filters universally in its systems If this application is generally adapted the market for these filters should be quite large
