Magneto Fluid Dynamics:

An Introduction to Magneto-fluid Mechanics Vincenzo Consolato Antonio Ferraro, Charles Plumpton, 1966

Magneto-Fluid Dynamics Paul Lorrain, Francois Lorrain, Stephane Houle, 2007-10-31 Magnetohydrodynamics MHD concerns the interaction between magnetic fields and conducting fluids We are concerned here with macroscopic interactions and when the conducting fluid is a plasma time scales are very much longer than the plasma period Plasma periods vary widely but are short say 10 second We prefer the term Magneto F i Z i Dynamics MFD because the discipline concerns mostly plasmas various liquid conductors and the liquid part of the Earth's core It seems that the only applications of MFD to water are the induction of electric currents in the oceans by the Earth's magnetic field and ship propulsion But even MFD is not quite appropriate because that term also includes solid conductors that move in magnetic fields This book is meant for graduate and upper division undergraduate students in Physics Geophysics and Astrophysics as well as for practicing scientists in these fields This book is no more than a brief introduction to MFD because this vast subject is closely related to many others namely Astrophysics Electrodynamics Fluid Dynamics Geophysics Oceanography Plasma Physics Thermonuclear Fusion etc We sketch the fundamentals and provide many Examples as well as Case Studies related to natural phenomena MFD sorely needs a rethink it must of course be totally compatible with Physics On the contrary it is the custom to discuss the shapes of imaginary magnetic field lines without ever referring to the required electric currents

Magneto Fluid Dynamics. Editor William Rees Sears, Magnetohydrodynamics and Fluid Dynamics: Action Principles and Conservation Laws Gary Webb, 2018-02-05 This text focuses on conservation laws in magnetohydrodynamics gasdynamics and hydrodynamics A grasp of new conservation laws is essential in fusion and space plasmas as well as in geophysical fluid dynamics they can be used to test numerical codes or to reveal new aspects of the underlying physics e.g. by identifying the time history of the fluid elements as an important key to understanding fluid vorticity or in investigating the stability of steady flows The ten Galilean Lie point symmetries of the fundamental action discussed in this book give rise to

the conservation of energy momentum angular momentum and center of mass conservation laws via Noether's first theorem. The advected invariants are related to fluid relabeling symmetries so called diffeomorphisms associated with the Lagrangian map and are obtained by applying the Euler-Poincaré approach to Noether's second theorem. The book discusses several variants of helicity including kinetic helicity cross helicity magnetic helicity Ertel's theorem and potential vorticity the Høllmann invariant and the Godbillon-Vey invariant. The book develops the non-canonical Hamiltonian approach to MHD using the non-canonical Poisson bracket while also refining the multisymplectic approach to ideal MHD and obtaining novel nonlocal conservation laws. It also briefly discusses Anco and Bluman's direct method for deriving conservation laws. A range of examples is used to illustrate topological invariants in MHD and fluid dynamics including the Hopf invariant the Calugareanu invariant the Taylor magnetic helicity reconnection hypothesis for magnetic fields in highly conducting plasmas and the magnetic helicity of Alfvén simple waves MHD topological solitons and the Parker Archimedean spiral magnetic field. The Lagrangian map is used to obtain a class of solutions for incompressible MHD. The Aharonov-Bohm interpretation of magnetic helicity and cross helicity is discussed. In closing examples of magnetosonic N-waves are used to illustrate the role of the wave number and group velocity concepts for MHD waves. This self-contained and pedagogical guide to the fundamentals will benefit postgraduate level newcomers and seasoned researchers alike.

A unified and systematic treatment of the main results and techniques of relativistic fluid dynamics with an emphasis on waves and shock waves. The first four chapters provide an introduction to the fundamental principles of relativistic fluid dynamics and magneto fluids. The remaining chapters present specific topics including non-linear electromagnetic waves in relativistic cold plasmas relativistic asymptotic waves and relativistic shock waves. Examples of the applications of the theory to plasma physics nuclear physics and astrophysics are presented.
