Meeting The Nations Needs For Biomedical And Behavioral Scientists:

Meeting the Nation's Needs for Biomedical and Behavioral Scientists National Research Council, Policy and Global Affairs, Office of Scientific and Engineering Personnel, Committee on National Needs for Biomedical and Behavioral Research Personnel, 1994-02-01 This book assesses the nation's future needs for biomedical and behavioral scientists and the role the National Research Service Awards NRSA program can play in meeting those needs. The year 1994 marks the twentieth anniversary of the National Research Act of 1974 PL 93 348 which established the NRSA program. In its twenty years of operation the NRSA program has made it possible for many thousands of talented individuals in the basic biomedical, behavioral, and clinical sciences to sharpen their research skills and to apply those skills to topics of special concern to the nation such as aging, hypertension, the genetic basis of disease, acquired immune deficiency syndrome, AIDS, cancer, environmental toxicology, nutrition, and health and substance abuse.

Meeting the Nation's Needs for Biomedical and Behavioral Scientists National Research Council, Policy and Global Affairs, Office of Scientific and Engineering Personnel, Studies and Surveys Unit, Committee on National Needs for Biomedical and Behavioral Research Personnel, 1994-02-01 On May 3, 1993, the National Research Council's NRC Committee on National Needs for Biomedical and Behavioral Research convened a public hearing to gather the views of colleagues on the future direction of the National Research Service Awards NRSA program. In preparation for the hearing, the committee formulated a set of questions to be addressed by respondents and consulted with the staff of the National Institutes of Health in compiling a list of individuals and organizations to whom a letter soliciting a response to those questions could be sent. See Appendix A. A letter posing the following four questions was sent to over 1,000 individuals: What is the most significant challenge we face today in the United States in maintaining an adequate supply of qualified scientists to sustain and advance health research? What improvements might be made in the National Research Service Awards NRSA program to assure a continuing supply of skilled investigators in the biomedical and behavioral sciences in the coming years? What steps might be taken to improve the effectiveness of the NRSA program in recruiting women and minorities into scientific careers? What features of the NRSA training grant might be strengthened to assure the maintenance of high quality research training environments?

Personnel, NRC Committee on National Needs for Biomedical and Behavioral Research Personnel, 1994 **Addressing the Nation's Changing Needs for Biomedical and Behavioral Scientists** National Research Council, Office of Scientific and Engineering Personnel, Education and Career Studies Unit, Committee on National Needs for Biomedical and Behavioral Scientists, 2000-08-16 As biomedical and behavioral research progresses into new areas, the number of scientists active in various fields rises and falls and the health needs of the U.S. population evolve, it is important to ensure that the preparation

of future investigators reflects these changes This book addresses these topics by considering questions such as the following What is the current supply of biomedical and behavioral scientists How is future demand for scientists likely to be affected by factors such as advances in research trends in the employment of scientists future research funding and changes in health care delivery What are the best ways to prepare prospective investigators to meet future needs in scientific research In the course of addressing these questions this volume examines the number of investigators trained every year patterns of hiring by universities and industry and the age of the scientific workforce in different fields and makes recommendations for the number of scientists that should be trained in the years ahead This book also considers the diversity of the research workforce and the importance of providing prospective scientists with the skills to successfully collaborate with investigators in related fields and offers suggestions for how government and universities should structure their research training programs differently in the future
