Membranes And Compartmentation In The Regulation Of Plant Functions:

Membranes and Compartmentation in the Regulation of Plant Functions A. M. Boudet, 1984 The premier symposia in plant biochemistry the Proceedings begun in 1965 have achieved an international reputation as the definitive reference in the field This volume presents a detailed and wide ranging study of the numerous roles of membranes within plant cells and will be required reading for biochemists plant biochemists plant physiologists molecular biologists and cell biologists

Phytochemistry Indra Vasil, 2012-12-02 Cell Culture and Somatic Cell Genetics of Plants Volume 4 Cell Culture in Phytochemistry reviews phytochemistry by employing plant cell cultures This book discusses the realization of industrial plant cell culture for the production of phytochemicals and molecular biological approach to understand the regulation of product synthesis The topics covered include the accumulation of secondary metabolites phenolic production in cultured tissues and stability of clones and subclones The somatic hybridization by protoplast fusion various techniques for continuous culture of plant cells and methodology of enzyme linked immunosorbent assays ELISA are also deliberated This volume provides intensive information on all aspects of plant cell and tissue culture and is recommended to both experienced researchers and to those newly entering the field The Plant Plasma Membrane Christer Larsson, Ian M.

Moller, 2012-12-06 The plasma membrane forms the living barrier between the cell and its surroundings For this reason it has a wide range of important functions related to the regulation of the composition of the cell interior and to communication with the cell exterior The plasma membrane has therefore attracted a lot of research interest Until the early 1970 s it was only possible to study the plasma membrane in situ its structure e g by electron microscopy and its function e g by uptake of radioactively labeled compounds into the intact cell or tissue The first isolation of plant protoplasts by enzymatic digestion of the cell wall in the early 1970 s was an important step forward in that it provided direct access to the outer surface of the plasma membrane More importantly T K Hodges and R J Leonard in 1972 published the description of a method by which a fraction enriched in plasma membranes could be isolated from plant tissues using sucrose gradient centrifugation As a result the 1970 s saw a leap forward in our understanding of the structure and function of the plasma membrane In 1981 S Widell and C Larsson published the first of a series of papers in which plasma membrane vesicles of high yield and purity were isolated from a wide range of plant tissues using aqueous polymer two phase partitioning Cell Culture and Somatic Cell Genetics of Plants I. propagation *Recent Advances of Plant Root Structure and Function* Oľíia Gasparíková, Milada Ciamporová, Igor Mistrík, F. Baluska, 2013-03-09 This book provides a comprehensive and interactive view of recent advances in the cytology anatomy and physiology of roots as presented at the 5th International Symposium on Structure and Function of Roots held on 31 August 4 September 1998 in Star Lesn Slovakia This edition differs from previous ones by including some aspects of functional genetics and plant morphogenesis The book is intended to serve both students and researchers as a valuable source of updated information ideas and concepts dealing with the most fundamental questions of development and function of plant roots *The Apoplast of Higher Plants: Compartment of Storage, Transport and Reactions* Burkhard Sattelmacher, Walter J. Horst, 2007-06-17 This book summarizes the experimental work conducted during a trans disciplinary research program conducted for six years by the German Research Foundation Each chapter includes introductory remarks written by internationally recognized scientists in their research areas Contributiing authors representing outstanding German scientists from such different disciplines as Physics Biochemistry Plant Nutrition Botany and Molecular Biology not only report original research but also review the state of knowledge in their fields of research **Plant-Environment**

Interactions Bingru Huang, 2016-04-19 With contributions from experts in various specialties Plant Environment Interactions discusses recent advances in cellular and molecular regulation of stress tolerance This third edition reviews new research in stress signal perception cellular mechanisms and genetic manipulation of stress tolerance for each individual stress It addresses how to evaluate the level of plant tolerance to stress as well as how to link mechanisms identified through analysis of plant environment interaction to producing stress tolerant germplasm through biotechnology and traditional breeding It also examines environmental stresses limiting plant productivity in agriculture horticulture and forestry

Evolution of Membrane Signaling and Trafficking in Plants Markus Geisler, Angus S. Murphy, Heven Sze, 2013-06-12 Membrane proteins are essential determinants of many biological processes in plants They function in metabolic processes signal transduction transport of small molecules and polymers across endo and plasma membranes and intercompartmental trafficking of proteins lipids and cell wall components During these integrative processes dynamic interactions of membrane proteins with other membrane or soluble components are thought to provide a high degree of flexibility that usually characterizes higher plants This concept is supported by the recent release of a first partial Arabidopsis interactome by the Arabidopsis Interactome Mapping Consortium <http://www.sciencemag.org/content/333/6042/601.full.htm> The Arabidopsis interactome reveals a strong enrichment of a few network communities including those for transmembrane transport and vesicle trafficking Strikingly the large transmembrane transport community shares a high amount of proteins with the vesicle trafficking community suggesting a strong physical and functional overlap and interaction
