The Multi-Agent Programming Contest 2021 Tobias Ahlbrecht,Jürgen Dix,Niklas Fiekas,Tabajara Krausburg,2021-09-30 This book constitutes the 15th edition of the annual Multi Agent Programming Contest MAPC 2020 It gives an overview of the competition describes the current scenario Furthermore it summarises this year s participants and their approaches and analyses some of the matches played and the contest as a whole In the second part each team contributed a paper describing their approach and experiences with creating a team of agents to participate in the contest Explainable and Transparent AI and Multi-Agent Systems Davide Calvaresi,Amro Najjar,Andrea Omicini,Reyhan Aydogan,Rachele Carli,Giovanni Ciatto,Joris Hulstijn,Kary Främling,2024-09-24 This volume constitutes the papers of several workshops which were held in conjunction with the 6th International Workshop on Explainable and Transparent AI and Multi Agent Systems EXTRAAMAS 2024 in Auckland New Zealand during May 6 10 2024 The 13 full papers presented in this book were carefully reviewed and selected from 25 submissions The papers are organized in the following topical sections User centric XAI XAI and Reinforcement Learning Neuro symbolic AI and Explainable Machine Learning and XAI Ethics *Interference Mitigation in Device-to-Device Communications* Masood Ur Rehman,Ghazanfar Ali Safdar,Mohammad Asad Rehman Chaudhry,2022-03-17 Explore this insightful foundational resource for academics and industry professionals dealing with the move toward intelligent devices and networks Interference Mitigation in Device to Device Communications delivers a thorough discussion of device to device D2D and machine to machine M2M communications as solutions to the proliferation of ever more data hungry devices being attached to wireless networks The book explores the use of D2D and M2M technologies as a key enabling component of 5G networks It brings together a multidisciplinary team of contributors in fields like wireless communications signal processing and antenna design The distinguished editors have compiled a collection of resources that practically and accessibly address issues in the development integration and enhancement of D2D systems to create an interference free network This book explores the complications posed by the restriction of device form factors and the co location of several electronic components in a small space as well as the proximity of legacy systems operating in similar frequency bands Readers will also benefit from the inclusion of A thorough introduction to device to device communication including its history and development over the last decade network architecture standardization issues and regulatory and licensing hurdles An exploration of interference mitigation in device to device communication underlaying LTE A networks A rethinking of device to device interference mitigation including discussions of the challenges posed by the proliferation of devices An analysis of user pairing for energy efficient device to device content dissemination Perfect for researchers academics and industry professionals working on 5G networks Interference Mitigation in Device to Device Communications will also earn a place in the libraries of undergraduate graduate and PhD students conducting research into wireless communications and applications as well as policy makers and communications industry regulators **TinyML for Edge**

Intelligence in IoT and LPWAN Networks Bharat S Chaudhari, Sheetal N Ghorpade, Marco Zennaro, Rytis Paškauskas, 2024-05-29 Recently Tiny Machine Learning TinyML has gained incredible importance due to its capabilities of creating lightweight machine learning ML frameworks aiming at low latency lower energy consumption lower bandwidth requirement improved data security and privacy and other performance necessities As billions of battery operated embedded IoT and low power wide area networks LPWAN nodes with very low on board memory and computational capabilities are getting connected to the Internet each year there is a critical need to have a special computational framework like TinyML TinyML for Edge Intelligence in IoT and LPWAN Networks presents the evolution developments and advances in TinyML as applied to IoT and LPWANs It starts by providing the foundations of IoT LPWANs low power embedded systems and hardware the role of artificial intelligence and machine learning in communication networks in general and cloud edge intelligence It then presents the concepts methods algorithms and tools of TinyML Practical applications of the use of TinyML are given from health and industrial fields which provide practical guidance on the design of applications and the selection of appropriate technologies TinyML for Edge Intelligence in IoT and LPWAN Networks is highly suitable for academic researchers and professional system engineers architects designers testers deployment engineers seeking to design ultra lower power and time critical applications It would also help in designing the networks for emerging and future applications for resource constrained nodes This book provides one stop solutions for emerging TinyML for IoT and LPWAN applications The principles and methods of TinyML are explained with a focus on how it can be used for IoT LPWANs and 5G applications Applications from the healthcare and industrial sectors are presented Guidance on the design of applications and the selection of appropriate technologies is provided

The Multi-Agent Transport Simulation MATSim Andreas Horni, Kai Nagel, Kay W. Axhausen, 2016-08-10 The MATSim Multi Agent Transport Simulation software project was started around 2006 with the goal of generating traffic and congestion patterns by following individual synthetic travelers through their daily or weekly activity programme It has since then evolved from a collection of stand alone C programs to an integrated Java based framework which is publicly hosted open source available automatically regression tested It is currently used by about 40 groups throughout the world This book takes stock of the current status The first part of the book gives an introduction to the most important concepts with the intention of enabling a potential user to set up and run basic simulations The second part of the book describes how the basic functionality can be extended for example by adding schedule based public transit electric or autonomous cars paratransit or within day replanning For each extension the text provides pointers to the additional documentation and to the code base It is also discussed how people with appropriate Java programming skills can write their own extensions and plug them into the MATSim core The project has started from the basic idea that traffic is a consequence of human behavior and thus humans and their behavior should be the starting point of all modelling and with the intuition that when simulations with 100 million particles are possible in computational physics

then behavior oriented simulations with 10 million travelers should be possible in travel behavior research The initial implementations thus combined concepts from computational physics and complex adaptive systems with concepts from travel behavior research The third part of the book looks at theoretical concepts that are able to describe important aspects of the simulation system for example under certain conditions the code becomes a Monte Carlo engine sampling from a discrete choice model Another important aspect is the interpretation of the MATSim score as utility in the microeconomic sense opening up a connection to benefit cost analysis Finally the book collects use cases as they have been undertaken with MATSim All current users of MATSim were invited to submit their work and many followed with sometimes crisp and short and sometimes longer contributions always with pointers to additional references We hope that the book will become an invitation to explore to build and to extend agent based modeling of travel behavior from the stable and well tested core of MATSim documented here
