Multilevel Secure Transaction Processing:

Multilevel Secure Transaction Processing Vijay Atluri, Sushil Jajodia, Binto George, 2012-12-06 Information security is receiving a great deal of attention as computers increasingly process more and more sensitive information. A multilevel secure database management system (MLS DBMS) is designed to store, retrieve, and process information in compliance with certain mandatory security requirements essential for protecting sensitive information from unauthorized access, modification, and abuse. Such systems are characterized by data objects labeled at different security levels and accessed by users cleared to those levels. Unless transaction processing modules for these systems are designed carefully, they can be exploited to leak sensitive information to unauthorized users. In recent years, considerable research has been devoted to the area of multilevel secure transactions that has impacted the design and development of trusted MLS DBMS products. *Multilevel Secure Transaction Processing* presents the progress and achievements made in this area. The book covers the state of the art research in developing secure transaction processing for popular MLS DBMS architectures such as kernelized, replicated, and distributed architectures and advanced transaction models such as workflows, long duration, and nested models. Further, it explores the technical challenges that require future attention. *Multilevel Secure Transaction Processing* is an excellent reference for researchers and developers in the area of multilevel secure database systems and may be used in advanced level courses in database security, information security, advanced database systems, and transaction processing.

Security of Data and Transaction Processing Vijay Atluri, Pierangela Samarati, 2012-12-06 *Security of Data and Transaction Processing* brings together in one place important contributions and up-to-date research results in this fast-moving area. *Security of Data and Transaction Processing* serves as an excellent reference providing insight into some of the most challenging research issues in the field.

Database and Application Security XV Martin S. Olivier, David L. Spooner, 2012-12-06 *Database and Application Security XV* provides a forum for original research results, practical experiences, and innovative ideas in database and application security. With the rapid growth of large databases and the application systems that manage them, security issues have become a primary concern in business, industry, government, and society. These concerns are compounded by the expanding use of the Internet and wireless communication technologies. This volume covers a wide variety of topics related to security and privacy of information in systems and applications, including access control models, role and constraint-based access control, distributed systems, information warfare, and intrusion detection. Relational databases, implementation issues, multilevel systems, new application areas including XML, database, and application security. *Database and Application Security XV* contains papers, keynote addresses, and panel discussions from the Fifteenth Annual Working Conference on Database and Application Security, organized by the International Federation for Information Processing (IFIP) Working Group 11.3 and held July 15-18, 2001, in Niagara-on-the-Lake, Ontario, Canada.

trusted recovery as an example to illustrate the principles of trusted recovery in defensive information warfare Traditional database recovery mechanisms do not address trusted recovery except for complete rollbacks which undo the work of benign transactions as well as malicious ones and compensating transactions whose utility depends on application semantics Database trusted recovery faces a set of unique challenges In particular trusted database recovery is complicated mainly by a the presence of benign transactions that depend directly or indirectly on malicious transactions and b the requirement by many mission critical database applications that trusted recovery should be done on the fly without blocking the execution of new user transactions Trusted Recovery And Defensive Information Warfare proposes a new model and a set of innovative algorithms for database trusted recovery Both read write dependency based and semantics based trusted recovery algorithms are proposed Both static and dynamic database trusted recovery algorithms are proposed These algorithms can typically save a lot of work by innocent users and can satisfy a variety of attack recovery requirements of real world database applications Trusted Recovery And Defensive Information Warfare is suitable as a secondary text for a graduate level course in computer science and as a reference for researchers and practitioners in information security Encyclopedia of Information Science and Technology, First Edition Khosrow-Pour, D.B.A., Mehdi, 2005-01-31 Comprehensive coverage of critical issues related to information science and technology **Computer Security - ESORICS 94** Dieter Gollmann, 1994-10-19 This volume constitutes the proceedings of the Third European Symposium on Research in Computer Security held in Brighton UK in November 1994 The 26 papers presented in the book in revised versions were carefully selected from a total of 79 submissions they cover many current aspects of computer security research and advanced applications The papers are grouped in sections on high security assurance software key management authentication digital payment distributed systems access control databases and measures **Encyclopedia of Database Technologies and Applications** Rivero, Laura C., Doorn, Jorge Horacio, Ferraggine, Viviana E., 2005-06-30 Addresses the evolution of database management technologies and applications along with the progress and endeavors of new research areas P xiii *Graduate Announcement* University of Michigan--Dearborn, 2000 Database Systems for Advanced Applications YoonJoon Lee, Jianzhong Li, Kyu-Young Whang, Doheon Lee, 2004-02-24 This book constitutes the refereed proceedings of the 9th International Conference on Database Systems for Advanced Applications DASFAA 2004 held in Jeju Island Korea in March 2004 The 60 revised full papers and 18 revised short papers presented together with 2 invited articles were carefully reviewed and selected from 272 submissions The papers are organized in topical sections on access methods query processing in XML security and integrity query processing in temporal and spatial databases semi structured databases knowledge discovery in temporal and spatial databases XML and multimedia and knowledge discovery on the Web query processing and optimization classification and clustering Web search mobile databases parallel and distributed databases and multimedia databases **Database and Data Communication Network Systems, Three-Volume Set** Cornelius T.
