Advancing Quantitative Methods in Second Language Research Luke Plonsky, 2015-07-03 Advancing Quantitative Methods in Second Language Research is the first hands on guide to conducting advanced research methods in the fields of applied linguistics and second language studies While a number of texts discuss basic quantitative research methodology none focus exclusively on providing coverage of alternative advanced statistical procedures in second language studies from a practical approach The text is bookended by discussions of these advanced procedures in the larger context of second language studies debating their strengths weaknesses and potential for further research the remaining chapters are how to sections each chapter following the same organization on a wide variety of advanced research methods By offering much needed coverage on advanced statistical concepts and procedures with an eye toward real world implementation Advancing Quantitative Methods in Second Language Research enhances the methodological repertoire of graduate students and researchers in applied linguistics and second language studies For additional content visit <http://oak.ucc.nau.edu/ldp3/AQMSLR.html>

Dependent Data in Social Sciences Research Mark Stemmler, Wolfgang Wiedermann, Francis L. Huang, 2024-10-21 This book covers the following subjects growth curve modeling directional dependence dyadic data modeling item response modeling IRT and other methods for the analysis of dependent data e g approaches for modeling cross section dependence multidimensional scaling techniques and mixed models It presents contributions on handling data in which the postulate of independence in the data matrix is violated When this postulate is violated and when the methods assuming independence are still applied the estimated parameters are likely to be biased and statistical decisions are very likely to be incorrect Problems associated with dependence in data have been known for a long time and led to the development of tailored methods for the analysis of dependent data in various areas of statistical analysis These include for example methods for the analysis of longitudinal data corrections for dependency and

corrections for degrees of freedom Researchers and graduate students in the social and behavioral sciences education econometrics and medicine will find this up to date overview of modern statistical approaches for dealing with problems related to dependent data particularly useful
