Nurturing Children A History Of Pediatrics:

Nurturing Children A. R. Colón, P. A. Colón, 1999-12-30 This history of the evolution of pediatrics from the beginning of recorded civilization examines chronologically the medical and societal antecedents of current child care Although the term pediatrics is modern the book explores the antecedents that facilitated the evolution of pediatric care as a separate discipline and a unique science These antecedents include ancient manuscripts and the writings of acknowledged medical classicists and the works of physicians in the East who recorded the medicine of the ancients their own original theories clinical observations and experience and exported their wisdom to the West The book's point of view demonstrates that healers from the beginning of recorded time understood the unique physiology of the infant and the distinct nutritional and medical needs of the growing child Despite this recognition centuries of poorly applied medical principles prevailed in the general population as adjuncts to societal conditions that included war pestilence ignorance of the pathophysiology of disease and the exploitation of labor In this milieu suffering was universal Pediatrics came into its own when richer more stable societies had the time energy and resources to provide for the most vulnerable of their subjects Motives included economic self interest as well as altruistic demand for social reform

Pediatric Formulations Daniel Bar-Shalom, Klaus Rose, 2014-01-30 Until the 1990s it was generally accepted that medicines were first developed for adults and their use in children was investigated later if at all One of the main tasks of hospital pharmacies was the manufacturing of child appropriate formulations in a more or less makeshift way The first change came in 1997 with U S legislation that rewarded manufacturers to do voluntary pediatric research Ten years later the European Union passed legislation that required manufacturers to discuss all pediatric aspects including formulations with the regulatory authorities as a condition of starting the registration procedure In consequence manufacturers must now cover all age groups including the youngest ones So far pediatric formulations were more a focus for academic researchers Through the changed regulatory environment there is now a sudden high commercial demand for age appropriate formulations This book begins by highlighting the anatomical physiological and developmental differences between adults and children of different ages It goes on to review the existing technologies and attempts to draw a roadmap to better innovative formulations in particular for oral administration The regulatory clinical ethical and pharmaceutical framework is also addressed
