Quality of Life Assessment: Key Issues in the 1990s S.R. Walker,Rachel M. Rosser,2012-12-06 It was over five years ago that the Centre for Medicines Research organized a workshop entitled Quality of Life Assessment and Application This workshop brought together a unique group of participants some of whom had been involved in studies on quality of life for well over a decade whilst others were meeting the subject for the first time This blend of experienced researchers and enthusiastic newcomers was a great stimulus to the discussions which followed individual

presentations as well as that resulting from the study groups In the ensuing publication a balance was sought between a consideration of the complex principles underlying the assessment of quality of life and the application of such assessments to specific clinical conditions which necessitated this approach The organization in 1991 of a second workshop entitled Quality of Life Assessment Key Issues in the 1990s resulted in a further consideration of the quality of life philosophy concepts and key instruments together with an update on assessing quality of life in a number of major disease areas Of particular importance was an examination of various viewpoints concerned with ethical questions and their implications and quality of life from industry regulatory and health care purchasers perspectives As a result of this second workshop the editors of the original book referred to above decided to produce a second edition with a number of updates and additional chapters

Platform Trial Designs in Drug Development Zoran Antonijevic, Robert A. Beckman, 2018-12-07 Platform trials test multiple

therapies in one indication one therapy for multiple indications or both These novel clinical trial designs can dramatically increase the cost effectiveness of drug development leading to life altering medicines for people suffering from serious illnesses possibly at lower cost Currently the cost of drug development is unsustainable Furthermore there are particular problems in rare diseases and small biomarker defined subsets in oncology where the required sample sizes for traditional clinical trial designs may not be feasible The editors recruited the key innovators in this domain The 20 articles discuss trial designs from perspectives as diverse as quantum computing patient s rights to information and international health The book begins with an overview of platform trials from multiple perspectives It then describes impacts of platform trials on the pharmaceutical industry s key stakeholders patients regulators and payers Next it provides advanced statistical methods that address multiple aspects of platform trials before concluding with a pharmaceutical executive s perspective on platform trials Except for the statistical methods section only a basic qualitative knowledge of clinical trials is needed to appreciate the important concepts and novel ideas presented
