Donald Secrest has the true writer's gift of transformation. What not even a novelist could do, he conveys out of the daily lives of workers in a North Carolina furniture factory! *The Rat Becomes Light* is an inspiring and heartwarming collection of stories in a very independent voice—a great pleasure to read!"

—JANE SWANSON SCHWARTZ

One of the best books of stories I ever read... Donald Secrest's respect for the people he writes about is genuine, and his knowledge of their lives profound. His vision is clear and unyielding, colored by an unerring sense of what is already in this volume seems one of the necessary ones."

—RED CHAPPEL

These stories display to excellent effect Donald Secrest's precisely measured language and his gift for extraordinary metaphor."

The Phantom God John C. Wathey, 2022-10-15 Does

neuroscience have anything to say about religious belief or the existence of God Some have tried to answer this question but in doing so most have strayed from the scientific method In *The Phantom God* computational biologist and neuroscientist John C Wathey Ph D tackles this problem head on exploring religious feelings not as the direct perception by the brain of some supernatural realm nor as the pathological misfiring of neurons but as a natural consequence of how our brains are wired Unlike other neurobiological studies of religion and spirituality *The Phantom God* treats mysticism not as something uniquely human and possibly supernatural in origin but as a completely natural phenomenon that has behavioral and evolutionary roots that can be traced far back into our vertebrate ancestry Grounded in evolutionary and behavioral biology this highly original and compelling book takes the reader on a journey through the neural circuitry of crying innate knowledge reinforcement learning emotional bonding embodiment interpersonal perception and the ineffable feeling of certainty that characterizes faith Wathey argues that the feeling of God s presence is spawned by innate neural circuitry similar to the mechanism that compels an infant to cry out for its mother In an adult this circuitry can be activated under conditions that mimic the extreme desperation and helplessness of infancy generating the compelling illusion of the presence of a loving powerful and all knowing savior When seen from this perspective the illusion also appears remarkably like one that has long been familiar to neurologists the phantom limb of the amputee spawned by the expectation of the patient s brain that the missing limb should still be there Including a primer on the basic concepts and terminology of neuroscience *The Phantom God* details the neural mechanisms behind the illusions and emotions of spiritual experience

Development of the Hypothalamus Gonzalo

Alvarez-Bolado, Valery Grinevich, Luis Puelles, 2015-08-06 The hypothalamus is the region of the brain in charge of the maintenance of the internal milieu of the organism. It is also essential to orchestrate reproductive, parental, aggressive, defensive, and other social behaviors and for the expression of emotions. Due to the structural complexity of the hypothalamus, however, many basic aspects of its ontogenesis are still mysterious. Nowadays, we assist to a renewal of interest spurred in part by the growing realization that prenatal and early postnatal influences on the hypothalamus could entail pathological conditions later in life. Intriguing questions for the future include: do early specification phenomena reflect on adult hypothalamic function and possibly on some kinds of behavior? Can early events like specification, migration, or formation of nuclei influence adult hypothalamic function? A change in morphological paradigm from earlier columnar interpretations to neuromeric ones is taking place. Concepts long taken for granted start to be challenged in view of advances in developmental and comparative neurobiology and notably also in the molecular characterization of hypothalamic structures. How should we understand the position of the hypothalamus in relation to other brain regions? Should we bundle it together with the thalamus, a functionally, genetically, and developmentally very different structure? Does the classic concept of diencephalon make sense, or should the hypothalamus be separated? Does the preoptic area belong to the hypothalamus or the telencephalon? The answer to these questions in the context of recent causal molecular analysis will help to understand hypothalamic evolution and morphogenesis as well as its adult function and connectivity. In this Research Topic, we have reviewed the fundamentals of hypothalamic ontogenesis and evolution, summarizing present-day knowledge, taking stock of the latest advances, and anticipating future challenges.

Behavior Theory and Philosophy Kennon A. Lattal, Philip N. Chase, 2013-03-14 This volume is based on a conference held at West Virginia University in April 2000 in recognition of the career-long contributions to psychology of Hayne W. Reese, Centennial Professor of Psychology who retired from the University at the end of the 1999-2000 academic year. Although Professor Reese may be even better known for his contributions to developmental psychology, his influential scholarly work on philosophical and conceptual issues that impact all of psychology provided the impetus for the conference. Behavior theory and philosophy was the name given by Professor Reese and one of the authors in this volume, Jon Krapfl, to a course that they developed at West Virginia University in the late 1970s. It seemed appropriate to adopt its title for both the conference and this volume as the shared theme involves the ideas that have shaped modern behavior analysis. A number of people contributed to the success of the May 2000 conference honoring Hayne Reese, and we thank them all for their efforts. Dean Duane Nellis of the Eberly College of Arts and Sciences at WVU offered enthusiastic support for the project, both financially and through his assignment of staff to help with the conference. Mark Dalessandro, Relations Director for the Eberly College of Arts and Sciences, served as the point man for the conference and made all of the local arrangements both within the university and the community.
