## **Rational Changes In Science:**

**Rational Changes in Science** Joseph C. Pitt, Marcello Pera, 2012-12-06 THE PROBLEMS OF SCIENTIFIC RATIONALITY Fashion is a fickle mistress Only yesterday scientific rationality enjoyed considerable attention consideration and even reverence among philosophers but today's fashion leads us to despise it and the matron rejected and abandoned as Hecuba complains *modo maxima rerum tot generis natisque potens nunc trahor exui inops* to cite Kant for our purpose who cited Ovid for his Like every fashion ours also has its paradoxical aspects as John Watkins correctly reminds in an essay in this volume Enthusiasm for science was high among philosophers when significant scientific results were mostly a promise it declined when that promise became an undeniable reality Nevertheless as with the decline of any fashion even the revolt against scientific rationality has some reasonable grounds If the taste of the philosophical community has changed so much it is not due to an incident or a whim This volume is not about the history of and reasons for this change Instead it provides a view of the new emerging image of scientific rationality in both its philosophical and historical aspects In particular the aim of the contributions gathered here is to focus on the concept around which the discussions about rationality have mostly taken place scientific change

**Theory Change in Science** Lindley Darden, 1991-09-12 This challenging and innovative book examines the processes involved in the birth and development of new scientific ideas The author has searched for strategies used by scientists for producing new theories both those that yield a range of plausible hypotheses and ones that aid in narrowing that range She goes on to focus on the development of the theory of the gene as a case study in scientific creativity Her discussion of modern genetics greatly demystifies the philosophy of science and establishes a realistic framework for understanding how scientists actually go about their work This compelling work will interest a broad range of readers including biologists and geneticists along with historians and philosophers of science

**Ernan McMullin and Critical Realism in the Science-theology Dialogue** Paul Laurence Allen, 2006 Scientists philosophers and theologians have wrestled repeatedly with the question of whether knowledge is similar or different in their various understandings of the world and God Although agreement is still elusive the epistemology of critical realism associated with Ian Barbour John Polkinghorne and Arthur Peacocke remains widely credible Relying on the lifetime work of philosopher Ernan McMullin this book expands our understanding of critical realism beyond a permanent stand off between the subjective and objective whether in science or theology Critical realism illuminates the subject and the objectively known simultaneously Responding to criticisms made against it this book defends critical realism in science and theology with a specific role to play in our understanding of God

**The Advancement of Science** Philip Kitcher, 1993 Beginning from an outline of classical views in philosophy of science this text attempts to understand the notions of scientific progress scientific objectivity and the growth of knowledge

*The Rationality of Science* W.H. Newton-Smith, 2002-02-07 A clear original and systematic introduction to philosophy of science which examines the theories of Popper Lakatos Kuhn and Feyerabend before proposing a new

temperate rationalist perspective      **Papers from the Fifth International Conference on Historical Linguistics, Galway, April 6-10 1981** Anders Ahlqvist, 1982-01-01 This volume presents a selection of the best papers from the Fifth International Conference on Historical Linguistics ICHL which was held in Galway April 6-10 1981 These papers provide an overview of work in the field of historical linguistics covering a wide variety of topics and languages      **Polish Essays in the Philosophy of the Natural Sciences** W. Krajewski, 2012-12-06      *Scrutinizing Science* A. Donovan, R. Laudan, 2012-12-06      **Postmodern Climate Change** Leigh Glover, 2007-01-24 A much needed analysis of international climate change politics as a key issue of modernity and in the context of environmentalism Leigh Glover presents a new way to understand the climate change problem and is concerned with problems of modernity and postmodernity in the context of contemporary environmental thought Focusing on the international politics surrounding the UN agreement of climate change the Framework Convention on Climate Change and its Kyoto Protocol Glover examines the issue using the key aspects of climate change science global environmental politics and global environmental management      **Irrationality** Lisa Bortolotti, 2014-12-01 We talk about irrationality when behaviour defies explanation or prediction when decisions are driven by emotions or instinct rather than by reflection when reasoning fails to conform to basic principles of logic and probability and when beliefs lack coherence or empirical support Depending on the context agents exhibiting irrational behaviour may be described as foolish ignorant unwise or even insane In this clear and engaging introduction to current debates on irrationality Lisa Bortolotti presents the many facets of the concept and offers an original account of the importance of judgements of irrationality as value judgements The book examines the standards against which we measure human behaviour and reviews the often serious implications of judgements of irrationality for ethics and policy Bortolotti argues that we should adopt a more critical stance towards accepted standards of rationality in the light of the often surprising outcomes of philosophical inquiry and cognitive science research into decision making Irrationality is an accessible guide to the concept and will be essential reading for students and scholars interested in the limitations of human cognition and human agency      Conceptual Change and the Philosophy of Science David J. Stump, 2015-05-15 In this book David Stump traces alternative conceptions of the a priori in the philosophy of science and defends a unique position in the current debates over conceptual change and the constitutive elements in science Stump emphasizes the unique epistemological status of the constitutive elements of scientific theories constitutive elements being the necessary preconditions that must be assumed in order to conduct a particular scientific inquiry These constitutive elements such as logic mathematics and even some fundamental laws of nature were once taken to be a priori knowledge but can change thus leading to a dynamic or relative a priori Stump critically examines developments in thinking about constitutive elements in science as a priori knowledge from Kant's fixed and absolute a priori to Quine's holistic empiricism By examining the relationship between conceptual change and the epistemological status of constitutive elements in science Stump puts forward an argument that scientific revolutions

can be explained and relativism can be avoided without resorting to universals or absolutes      Science, Technology, Policy and International Law Justo Corti Varela, Paolo Davide Farah, 2024-10-02 This book presents innovative insights into the intersections between science technology and society and particularly their regulation by the law Departing from the idea that law and science have similar methods and objectives the book deals with problems and solutions that source from these interactions concerns on how to integrate scientific evidence into trials how to best regulate new technologies or whether technological innovations could improve democratic legitimacy create new regulatory tools or even new spaces of regulation and what is the impact on the society The edited collection by building on a functionalist and comparatist approach offers answers to how to best integrate law science and technology in policy making and reviews the current attempts made at the transnational and international levels Case studies ranging from emerging technologies via environmental protection to statistics are complemented by a solid theoretical framework all of which seek to provide readers with tools for critical thinking in the reassessment of the relationship among theory practice political goals and international regulation

Conceptual Change in Biology Alan C. Love, 2014-11-07 This volume explores questions about conceptual change from both scientific and philosophical viewpoints by analyzing the recent history of evolutionary developmental biology It features revised papers that originated from the workshop Conceptual Change in Biological Science Evolutionary Developmental Biology 1981 2011 held at the Max Planck Institute for the History of Science in Berlin in July 2010 The Preface has been written by Ron Amundson In these papers philosophers and biologists compare and contrast key concepts in evolutionary developmental biology and their development since the original seminal Dahlem conference on evolution and development held in Berlin in 1981 Many of the original scientific participants from the 1981 conference are also contributors to this new volume and in conjunction with other expert biologists and philosophers specializing on these topics provide an authoritative comprehensive view on the subject Taken together the papers supply novel perspectives on how and why the conceptual landscape has shifted and stabilized in particular ways yielding insights into the dynamic epistemic changes that have occurred over the past three decades This volume will appeal to philosophers of biology studying conceptual change evolutionary developmental biologists focused on comprehending the genesis of their field and evaluating its future directions and historians of biology examining this period when the intersection of evolution and development rose again to prominence in biological science      *The Theory of the Knowledge Square: The Fuzzy Rational Foundations of the Knowledge-Production Systems* Kofi Kissi Dompere, 2012-08-28 The monograph is about a meta theory of knowledge production process and the logical pathway that connects the epistemic possibility to the epistemic reality It examines the general conditions of paradigms for information processing and isolates the classical and fuzzy paradigms for comparative analysis The sets of conditions that give rise to them are defined stated and analyzed to abstract the corresponding sets of laws of thought The fuzzy paradigm with its corresponding logic and mathematics is related to inexact symbolism for the

defective information structure where the results of the knowledge production must satisfy the epistemic conditionality composed of fuzzy conditionality and fuzzy stochastic conditionality under the principle of logical duality with continuum The classical paradigm with its corresponding logic and mathematics is related to exact symbolism for exact information structure where the vagueness component of the defectiveness is assumed away and where the results of the knowledge production must satisfy no epistemic conditionality or at the maximum only the stochastic conditionality under the principle of logical dualism with excluded middle It is argued that the epistemic path that links ontological space to the epistemological space is information The ontological space is taken as the primary category of reality while the epistemological space is shown to be a derivative Such information is universally defective and together with assumptions imposed guides the development of paradigms with their laws of thought logic of reasoning mathematics and computational techniques The relational structure is seen in terms of logical trinity with a given example as matter information energy transformational trinity which is supported by the time trinity of past present future relationality The book is written for professionals researchers and students working in philosophy of science decision choice theories economies sciences computer science engineering cognitive psychology and researchers working on or interested in fuzzy paradigm fuzzy logic fuzzy decisions and phenomena of vagueness and ambiguities fuzzy mathematics fuzzy stochastic processes and theory of knowledge It is further aimed at research institutions and libraries The subject matter belongs to extensive research and development taking place on fuzzy phenomena and the debate between the fuzzy paradigm and the classical paradigm relative to informatics synergetic science and complexity theory The book will have a global appeal and across disciplines Its strength besides the contents is the special effort that is undertaken to make it relevant and accessible to different areas of sciences and knowledge production

**Fuzziness and Foundations of Exact and Inexact Sciences** Kofi Kissi

Dompere, 2012-08-23 The monograph is an examination of the fuzzy rational foundations of the structure of exact and inexact sciences over the epistemological space which is distinguished from the ontological space It is thus concerned with the demarcation problem It examines exact science and its critique of inexact science The role of fuzzy rationality in these examinations is presented The driving force of the discussions is the nature of the information that connects the cognitive relational structure of the epistemological space to the ontological space for knowing The knowing action is undertaken by decision choice agents who must process information to derive exact inexact or true false conclusions The information processing is done with a paradigm and laws of thought that constitute the input output machine The nature of the paradigm selected depends on the nature of the information structure that is taken as input of the thought processing Generally the information structure received from the ontological space is defective from the simple principles of acquaintances and the limitations of cognitive agents operating in the epistemological space How then do we arrive and claim exactness in our knowledge production system The general conclusion of this book is that the conditions of the fuzzy paradigm with its laws of

thought and mathematics present a methodological unity of exact and inexact sciences where every zone of thought has fuzzy covering

**Kuhn's Evolutionary Social Epistemology** K. Brad Wray, 2011-09-29 Kuhn's *Structure of Scientific Revolutions* 1962 has been enduringly influential in philosophy of science challenging many common presuppositions about the nature of science and the growth of scientific knowledge However philosophers have misunderstood Kuhn's view treating him as a relativist or social constructionist In this book Brad Wray argues that Kuhn provides a useful framework for developing an epistemology of science that takes account of the constructive role that social factors play in scientific inquiry He examines the core concepts of *Structure* and explains the main characteristics of both Kuhn's evolutionary epistemology and his social epistemology relating *Structure* to Kuhn's developed view presented in his later writings The discussion includes analyses of the Copernican revolution in astronomy and the plate tectonics revolution in geology The book will be useful for scholars working in science studies sociologists and historians of science as well as philosophers of science

**Psychology of Science** Barry Gholson, 1989-07-28 This 1989 book offers a comprehensive overview of the work of scholars in several different disciplines contributing to the development of the psychology of science the systematic elaboration and application of psychological concepts and methods to clarify the nature of the scientific enterprise

*Climate Rationality* Jason S. Johnston, 2021-08-19 Most environmental statutes passed since 1970 have endorsed a pragmatic or precautionary principle under which the existence of a significant risk is enough to trigger regulation At the same time targets of such regulation have often argued on grounds of inefficiency that the associated costs outweigh any potential benefits In this work Jason Johnston unpacks and critiques the legal economic and scientific basis for precautionary climate policies pursued in the United States and in doing so sheds light on why the global warming policy debate has become increasingly bitter and disconnected from both climate science and economics Johnston analyzes the most influential international climate science assessment organizations the US electric power industry and land management and renewable energy policies Bridging sound economics and climate science this pathbreaking book shows how the United States can efficiently adapt to a changing climate while radically reducing greenhouse gas emissions

**The Milky Way Galaxy and**

**Statistical Cosmology, 1890-1924** Erich Robert Paul, 1993-11-26 Paul describes the rise of statistical cosmology and how it has set the stage for many of the most significant developments of twentieth century astronomy

Institutional Change and Globalization John L. Campbell, 2004-08-15 This book is about some of the most important problems confronting social scientists who study institutions and institutional change It is also about globalization particularly the frequent claim that globalization is transforming national political and economic institutions as never before
