Lost Cause Causation The Mind Body Pro:

The Lost Cause Celia Elizabeth Green, 2003 The concept of causation enters into many fields of philosophy This analysis has been written with special reference to philosophy of mind but is of general relevance Descartes on Causation Tad M. Schmaltz, 2013-01-31 This book is a systematic study of Descartes theory of causation and its relation to the medieval and early modern scholastic philosophy that provides its proper historical context The argument presented here is that even though Descartes offered a dualistic ontology that differs radically from what we find in scholasticism his views on causation were profoundly influenced by scholastic thought on this issue This influence is evident not only in his affirmation in the Meditations of the abstract scholastic axioms that a cause must contain the reality of its effects and that conservation does not differ in reality from creation but also in the details of the accounts of body body interaction in his physics of mind body interaction in his psychology and of the causation that he took to be involved in free human action In contrast to those who have read Descartes as endorsing the occasionalist conclusion that God is the only real cause a central thesis of this study is that he accepted what in the context of scholastic debates regarding causation is the antipode of occasionalism namely the view that creatures rather than God are the causal source of natural change What emerges from the defense of this interpretation of Descartes is a new understanding of his contribution to modern thought on causation **Rethinking**

Descartes's Substance Dualism Lynda Gaudemard, 2021-09-01 This monograph presents an interpretation of Descartes s dualism which differs from the standard reading called classical separatist dualism claiming that the mind can exist without the body It argues that contrary to what it is commonly claimed Descartes s texts suggest an emergent creationist substance dualism according to which the mind is a nonphysical substance created and maintained by God which cannot begin to think without a well disposed body According to this interpretation God s laws of nature endow each human body with the power to be united to an immaterial soul While the soul does not directly come from the body the mind can be said to emerge from the body in the sense that it cannot be created by God independently from the body The divine creation of a human mind requires a well disposed body a physical categorical basis This kind of emergentism is consistent with creationism and does not necessarily entail that the mind cannot survive the body This early modern view has some connections with Hasker s substance emergent dualism 1999 Indeed Hasker states that the mind is a substance emerging at one time from neurons and that consciousness has causal powers which effects cannot be explained by physical neurons An emergent unified self existing entity emerges from the brain on which it acts upon For its proponents Hasker s view explains what Descartes s dualism fails to explain especially why the mind regularly interacts with one and only one body After questioning the notion of emergence the author argues that the theory of emergent creationist substance dualism that she attributes to Descartes is a more appropriate alternative because it faces fewer problems than its rivals This monograph is valuable for anyone interested in the history of early modern philosophy and contemporary philosophy of mind **Enzyklopädie Philosophie**
