## **Low Achieving Children The First Seven Years:**

**Low Achieving Children** Sarah H. Broman, Ellen Bien, Peter Shaughnessy, 1985 Investigating and measuring risk factors and markers for low achievement in children this unique volume studies children from gestation to age seven This monograph evaluates the social biological and cognitive characteristics that served effectively as predictors and correlates of learning disabilities in normally intelligent children

**Stability and Continuity in Mental Development** M. H. Bornstein, N. A. Krasnegor, 2013-05-13 Filling a gap in current literature on human development this volume explores the influence of psychophysiological behavioral and social factors on stability and continuity in the development of the mind during human infancy The book reviews existing literature presents new data and discusses issues of substance in mental development methodology and interpretation Commentaries by recognized experts interpret the research results from the previous chapters

Self-regulation of Learning and Performance Dale H. Schunk, Barry J. Zimmerman, 2023-01-06 In recent years educators have become increasingly concerned with students attempts to manage their own learning and achievement efforts through activities that influence the instigation direction and persistence of those efforts In 1989 Zimmerman and Schunk edited the first book devoted to this topic They assembled key theorists offering a range of perspectives on how students self regulate their academic functioning One purpose of that volume was to provide theoretical direction to ongoing as well as nascent efforts to explore academic self regulatory processes Since that date there has been an exponential surge in research This second volume on academic self regulation offers the fruits of the first generation of research It also addresses a number of key issues that have arisen since then such as how self regulation differs from such related constructs as motivation and metacognition and whether students can be taught self regulatory skills The contributors reveal an interesting uplifting and at times disturbing picture of how students grapple with the day to day problems of achieving in circumstances with inherent limitations and obstacles This volume provides insight into the source of students capabilities to surmount adversities the origins of their self initiated processes designed to improve learning motivation and achievement The text is organized on the basis of a conceptual framework that analyzes academic self regulation into four major dimensions That model is presented in the first chapter and key processes that influence each of these dimensions are discussed by prominent researchers in the chapters that follow Because each chapter is written to follow a common format this work provides a level of continuity and parsimony normally found only in authored textbooks

**Retardation in Young Children** Sarah H. Broman, Paul L. Nichols, Peter Shaughnessy, Wallace Kennedy, 2013-01-11 Results of the Collaborative Perinatal Project report disclose the risk factors for mental retardation found in children examined from the prenatal period to age seven Both biological and social risk factors are analyzed for both severe and mild cognitive deficits The authors of this volume investigated the etiologies of the neurological subgroups of the retarded and reveal through comparisons with non retarded groups important population factors related to normal cognitive development

Gross,Donna Spiker,Christine W. Haynes,1997 Each year in the United States 250 000 infants are born too soon weighing too little For these low birth weight premature infants the future is uncertain since they are at risk for a variety of serious medical and developmental problems including behavioral and learning disorders that may have damaging effects for the rest of their lives The extent to which a comprehensive early intervention program could improve or prevent these adverse outcomes was examined in the Infant Health and Development Program a randomized controlled trial involving almost 1 000 infants in eight cities in the United States This book describes in detail the program its research methodology the progress of the program and the results of the clinical trial The program was administered by an interdisciplinary team composed of physicians biostatisticians child development specialists and researchers from several disciplines It was instituted upon the discharge of the infants from the neonatal nursery and was maintained for three years One third of the infants were randomly assigned to an intervention group the remainder to a follow up group Infants in both groups received pediatric care and community referral services but only those in the intervention group participated in a program that included extensive home visits attendance at a child development center and group meetings for parents The results of the program proved to be clinically important at age three the children in the intervention group had significantly higher IQ scores greater cognitive development and fewer behavioral problems The implications of the findings for public policy are equally important for there is increasing interest in the prevention early detection and management of developmental disabilities in children as evidenced by such legislation as the Education for All Children Act Strategies to minimize the problems of low birth weight children with their potential for long term savings through the prevention of disabilities and their attendant costs could have significant repercussions in such governmental areas as medical care education and social welfare **Annual Progress in**
