The First Humans Frederick E. Grine, John G Fleagle, Richard E. Leakey, 2009-05-24 There are some issues in human paleontology that seem to be timeless Most deal with the origin and early evolution of our own genus something about which we should care Some of these issues pertain to taxonomy and systematics How many species of Homo were there in the Pliocene and Pleistocene How do we identify the earliest members the genus Homo If there is more than one Plio Pleistocene species how do they relate to one

another and where and when did they evolve Other issues relate to questions about body size proportions and the functional adaptations of the locomotor skeleton When did the human postcranial Bauplan evolve and for what reasons What behaviors and what behavioral limitations can be inferred from the postcranial bones that have been attributed to Homo habilis and Homo erectus Still other issues relate to growth development and life history strategies and the biological and archeological evidence for diet and behavior in early Homo It is often argued that dietary change played an important role in the origin and early evolution of our genus with stone tools opening up scavenging and hunting opportunities that would have added meat protein to the diet of Homo Still other issues relate to the environmental and climatic context in which this genus evolved

Encyclopedia of Anthropology H. James Birx, 2006 Focuses on physical social and applied anthropology archaeology linguistics and symbolic communication Topics include hominid evolution primate behaviour genetics ancient civilizations cross cultural studies and social theories **The Publishers Weekly**, 1982 [The Truth about Human Origins](#) Brad Harrub, Bert Thompson, 2003 Ever since Charles Darwin first published The Origin of Species on November 24 1859 the subject of origins has been one of the most controversial topics around Sadly it also is a subject that is fraught with erroneous theories and concepts Most students today are taught that organic evolution is not a theory but a fact that all reputable scientists accept Disclaimers from the evolutionary community notwithstanding such a claim is quite simply wrong We believe it is time for someone to offer what renowned news commentator Paul Harvey would call the rest of the story That is what The Truth About Human Origins does It tells the rest of the story as it discusses the scientific facts about mankind's beginning For example it investigates the record of the rocks as that record relates to human evolution It demonstrates how evolutionary theory is unable to explain things like the origin of gender and sexual reproduction the origin of language and communication the origin of the brain the mind and human consciousness and the origin of skin colors and blood types It also examines in an in depth fashion the so called molecular evidence of human evolution **The Shape of Things Unseen** Adam Zeman, 2025-01-16 Fascinating absorbing and educative A C Grayling Highly original and beautifully written Dominic Lawson A compelling insight into how our imagination works based on the latest scientific research People often think of imagination as something used only in creative endeavours In fact we use imagination constantly as we reminisce anticipate plan daydream read create imagined worlds The truth is we live in the here and now much less than we tend to think Imagination isn't the exception in our daily lives it's our default setting Yet only now are we beginning to understand exactly how it works From hallucination to sleepwalking from REM sleep to delusions neurologist Adam Zeman brilliantly guides us through the latest scientific studies in the world of the imagination He draws on research in neuroscience the study of human origins and child development to show how the human brain is above all else a creative imaginative organ and that we have evolved to share what we imagine Our brains behave in strikingly similar ways when we observe remember imagine or act Imagine looking at a cube and your eye will trace the contours of the cube as if you were

actually seeing it Yet it turns out that people differ hugely in their imaginative experience Some people lack sensory imagery altogether they would be unable to picture their family if asked to but still lead fulfilling even highly creative lives From how we visualise to how we understand the minds of others from the benefits of play to mental disorders The Shape of Things Unseen dazzles and delights It is an essential guide to the latest discoveries about the workings of the human mind
