Second Language Learning and Language Teaching Vivian Cook, 2013-11-26 The fourth edition of this classic textbook has been revised to reflect recent developments in language teaching and learning yet retains the basic structure and approach so popular with its readers Teaching and learning content has been updated particularly taking into account the rise of task based learning Conversational Analysis and social models of second language acquisition changes in national syllabuses and examinations and the increasing controversy over the role of the native speaker target Each chapter has been revised to stand alone enabling the text to be taught and studied out of sequence if preferred A set of focussing questions has also been added to each and further reading sections have been updated In addition icons appear throughout the text signalling where extra information summaries data lecture notes test batteries and more can be found on the author's accompanying website www.routledge.com/cw/cook Second Language Learning and Language Teaching remains the essential textbook for all student teachers of modern languages and TESOL as well as applied linguistics

Recursion and Human Language Harry van der Hulst, 2010-03-26 The present volume is an edited collection of original contributions which all deal with the issue of recursion in human language's All contributions originate as papers that were presented at a conference on the topic of recursion in human language organized by Dan Everett in March 22 2007 For the purpose of this collection all articles underwent a double blind peer review process The present chapters were written in the course of 2008 Although the recursive nature of linguistic expressions i.e. the apparent possibility of producing an infinite number of expressions with finite means has been noted for a long time no general agreement seems to exist concerning the empirical status as well as mathematical formalization of this characteristic of

human languages or of the grammars that lie behind these utterances that make up these languages. Renewed interest in this subject was sparked by recent claims that recursion is perhaps the sole uniquely human and as such universal trait of human language (cf Chomsky, Hauser and Fitch 2000). In this volume the issue of recursion is tackled from a variety of angles. Some articles cover formal issues regarding the proper characterization or definition of recursion while others focus on empirical issues by examining the kinds of structure in languages that suggest recursive mechanism in the grammar. Most articles discuss syntactic phenomena but several involve morphology, the lexicon and phonology. In addition we find discussions that involve evolutionary notions and language disorders and the broader cognitive context of recursion.

Language Typology Alice Caffarel, J.R. Martin, Christian M.I.M. Matthiessen, 2004-12-23. This book is intended as a systemic functional contribution to language typology both for those who would like to understand and describe particular languages against the background of generalizations about a wide range of languages and also for those who would like to develop typological accounts that are based on and embody descriptions of the systems of particular languages rather than isolated constructions. The book is a unique contribution in at least two respects. On the one hand it is the first book based on systemic functional theory that is specifically concerned with language typology. On the other hand the book combines the particular with the general in the description of languages: it presents comparable sketches of particular languages while at the same time identifying generalizations based on the languages described here as well as on other languages. The volume explores eight languages covering seven language families: French, German, Pitjantjatjara, Tagalog, Telugu, Vietnamese, Chinese and Japanese.

The Development of Language Geoff Williams, Annabelle Lukin, 2006-03-22. This book presents a unique range of interdisciplinary work on questions of language development and evolution. It makes visible the significant contribution which meaning oriented linguistics is making to debates about the origins of language from the perspective of language evolution in the species as well as language development in the child. As well as linguistics in the systemic functional or Hallidayan tradition, the book offers contributions from primatology, psychiatry, sociology and education.

Language Poets Use Winifred Nowottny, 2000-12-01 Mrs Nowottny's chief aim in this valuable book which could serve as a useful introduction to practical criticism is to inquire what it is that makes the language of poetry poetic The book grows out of the leading trends today in ideas about language and the way it works but to the matters discussed Mrs Nowottny brings a keen mind of her own and considerable powers as a literary critic Stressing the continuity of poetry with other uses of language she shows how under the control of the poet's purpose everyday language contributes to the achievement of the most complex and profound effects and she illustrates these effects with a wealth of examples
