Neurocritical Care John P. Adams, Dominic Bell, Justin McKinlay, 2010-01-18 Brain injury is a worldwide leading cause of mortality and morbidity and requires early and appropriate management to minimize these adverse sequelae Despite such needs access to specialist centers is limited forcing both immediate and secondary care of these patients onto generalist staff These responsibilities are made more problematical by differences in patient management between and even within specialist centers due in part to an insufficient evidence base for many interventions directed at brain injury This book is borne out of the above observations and is targeted at emergency and acute medicine anesthetic and general intensive care staff caring for brain injury of diverse etiology or surgical teams responsible for the inpatient care of minor to moderate head trauma Although explaining the various facets of specialist care the book is not intended to compete with texts directed at neurosciences staff but aims to advise on optimal care in general hospitals including criteria for transfer by a combination of narrative on pathophysiology principles of care templates for

documentation and highly specific algorithms for particular problems. It is intended that the content and structure can form the basis of guidelines and protocols that reflect the needs of individual units and that can be constantly refined. Our ultimate goal is to promote informed, consistent, auditable, multidisciplinary care for this cohort of patients and we hope that this text contributes to that process.

*Advances and Technical Standards in Neurosurgery* L. Symon, L. Calliauw, F. Cohadon, J. Lobo Antunes, F. Loew, H. Nornes, E. Pásztor, J. D. Pickard, A. J. Strong, M. G. Yaşargil, 2012-12-06

As an addition to the European postgraduate training system for young neurosurgeons we began to publish in 1974 this series of *Advances and Technical Standards in Neurosurgery* which was later sponsored by the European Association of Neurosurgical Societies. This series was first discussed in 1972 at a combined meeting of the Italian and German Neurosurgical Societies in Taormina, the founding fathers of the series being Jean Brihaye, Bernard Pertuiset, Fritz Loew and Hugo Krayenbühl. Thus were established the principles of European co-operation which have been born from the European spirit flourished in the European Association and have throughout been associated with this series. The fact that the English language is well on the way to becoming the international medium at European scientific conferences is a great asset in terms of mutual understanding. Therefore we have decided to publish all contributions in English regardless of the native language of the authors. All contributions are submitted to the entire editorial board before publication of any volume. Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals. Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made. The contributions are written by specialists in the given fields and constitute the first part of each volume.
