Sparse Grids and Applications - Munich 2012

Jochen Garcke,Dirk Pflüger,2014-04-11 Sparse grids have gained increasing interest in recent years for the numerical treatment of high dimensional problems Whereas classical numerical discretization schemes fail in more than three or four dimensions sparse grids make it possible to overcome the curse of dimensionality to some degree extending the number of dimensions that can be dealt with This volume of LNCSE collects the papers from the proceedings of the second workshop on sparse grids and applications demonstrating once again the importance of this numerical discretization scheme The selected articles present recent advances on the numerical analysis of sparse grids as well as efficient data structures and the range of applications extends to uncertainty quantification settings and clustering to name but a few examples

Scale Space and PDE Methods in Computer Vision Roger S. Frantz, 2005-06-02 As everyone knows intuition is warm and fuzzy qualitative not measurable Economics on the other hand is quantitative and if it is not a hard science at least it is the queen of the social sciences It is therefore intuitively obvious that intuition and economics are as if oil and water The problem is what is intuitively obvious is not always correct And there are two major reasons why intuition and economics are not like oil and water First economics concerns itself with decision making and decisions are made in the brain The human brain is the size of a grapefruit weighing three pounds with approximately 180 billion neurons each physically independent but interacting with the other neurons What we call intuition is like decision making a natural information processing function of the brain Second despite the current emphasis on quantitative analysis and deductive logic there is a rich history of economists speaking about intuition First the human brain specifically the neocortex has a left and right hemisphere The specialized analytical style of the left hemisphere and the specialized intuitive style of the right hemispheres complement each other

Scale Space and PDE Methods in Computer Vision Ron Kimmel, Nir Sochen, Joachim Weickert, 2005-03-31 Welcome to the proceedings of the 5th International Conference on Scale Space and PDE Methods in Computer Vision The scale space concept was introduced by Iijima more than 40 years ago and became popular later on through the works of Witkin and Koenderink It is at the junction of three major schools of thought in image processing and computer vision the design of Iters axiomatic approaches based on partial differential equations PDEs and variational methods for image regularization Scale space ideas belong to the mathematically best understood approaches in image analysis They have entered numerous successful applications in medical imaging and a number of other fields where they often give results of very high quality This conference followed

biennial meetings held in Utrecht Corfu Vancouver and Skye It took place in a little castle Schl osschen Sch onburg near the small town of Hofgeismar Germany Inspired by the very successful previous meeting at Skye we kept the style of gathering people in a slightly remote and scenic place in order to encourage many fruitful discussions during the day and in the evening Wereceived79fullpaperssubmissionsofahighstandardthat ischaracteristic for the scale space conferences Each paper was reviewed by three experts from the Program Committee sometimes helped by additional reviewers Based on the resultsofthesereviews 53paperswereaccepted Weselected24manuscripts for oral presentation and 29 for poster presentation
