Low Thermal Expansion Glass Ceramics Hans Bach, Dieter Krause, 2005 *Ceramic Abstracts* American Ceramic Society, 1988 **Technical Paper**, 1951 **Low Thermal Expansion Glass Ceramics** Dieter Krause, Hans Bach, 2005-07-20 This completely revised edition features new sections on glass ceramic applications and their performance CDC grinding and laser gyroscopes containing Zerodur providing an overview of Schott's activities for scientists engineers and managers *Science and Technology of Electroceramic Thin Films* O. Auciello, Rainer Waser, 1995-02-28 Electroceramic thin films hold out the promise of applications in entirely new generations of advanced microdevices that may revolutionise technology creating multibillion dollar markets in the process Less glamorous than the high temperature superconductors but probably just as important are electrically conductive ferroelectric piezoelectric pyroelectric electro optic and magnetic films The list of potential applications of films having these properties is virtually endless but there are still some issues to be resolved before fully functioning devices reach the market All these issues and more are discussed in *Science and Technology of Electroceramic Thin Films* which provides one of the best most up to date summaries of the field currently available

Low Thermal Expansion Glass Ceramics, 1995 This book is one of a series reporting on international research and development activities conducted by the Schott group of companies With the series Schott aims to provide an overview of its activities for scientists engineers and managers from all branches of industry worldwide where glasses and glass ceramics are of interest Each volume begins with a chapter providing a general idea of the current problems results and trends relating to the subjects treated This volume describes the fundamental principles the manufacturing process and applications of low thermal expansion glass ceramics The composition structure and stability of polycrystalline materials having a low thermal expansion are described and it is shown how low thermal expansion glass ceramics can be manufactured from appropriately chosen glass compositions Examples illustrate the formation of this type of glass ceramic by utilizing normal production processes together with controlled crystallization Thus glass ceramics with thermal coefficients of expansion of less than $0.3 \times 10^{-6} \text{ K}^{-1}$ can be obtained Even for the mass production of high quality cooktop panels Ceran R oven windows and other household appliances a high reproducibility of the properties is achieved Special glass ceramics Zerodur R for technological and scientific applications such as high precision optics or large astronomical mirrors are equally discussed
