Offshore And Arctic Operations Symposium 199:

Nonlinear Dynamics of Compliant Offshore Structures Patrick Bar-Avi, Haym Benaroya, 2017-12-04 This monograph provides a general background to the modelling of a special class of offshore structures known as compliant structures. External forcing is resisted by buoyancy and tension forces which increase when the structure is slightly offset from its equilibrium. The technical development given in this book is presented in such a way as to highlight the adaptability of the modelling and the reader is shown how the techniques described can be applied to a variety of different offshore structures.

Arctic Underwater Operations Louis Rey, 2012-12-06 Opening Speech of the ICEDIVE 84 Conference by His Royal Highness Prince Bertil of Sweden. I am very pleased to be invited to open the International Conference ICEDIVE 84 dealing with medical and technical problems of diving and related underwater activities in arctic conditions. Until recent times the arctic was considered a strange and remote area of minor importance. However, in a world with diminishing natural resources, arctic areas have become a region of global importance because of their enormous resources and strategic position. Certain experts believe that more than 50% of oil reserves are sleeping in these northern areas which are cold, harsh and hostile to man. Operations in arctic areas are extremely difficult, expensive and demand high levels of technical, scientific and physiological achievement. One should recall, for example, that Alaskan oil investment only became economically viable after the 1973-1974 price explosion. Recent political/military troubles in the Gulf have increased interest in the development of polar resources. This conference is unique as it is the first time that medical and technical specialists interested in the problem of diving in arctic conditions have met in an international forum. Development of the arctic resources is a matter of international urgency and it pleases me that scientists from the USA, Canada, the USSR, Australia and Europe have gathered here in Stockholm to present their experience and to discuss problems in this field.

Differentiating and defining 'exposed' and 'offshore' aquaculture and implications for aquaculture operation, management, costs, and policy Tyler Sclodnick, Kevin Gerald Heasman, Bela H. Buck,2025-02-17 Ocean based aquaculture has typically occurred in protected coastal environments however the industry and been expanding into offshore locations over the past few decades The term offshore has been used to broadly define any aquaculture facility that either is spatially far from shore or exposed to high energy environments even though these are different situations In most cases however offshore is not used in its primary sense namely the distance from the coastline A definition for offshore in the context of aquaculture has not been clearly defined and continues to lead to ambiguity and confusion among industry participants support industries academics and regulators Recent advances in the sector and a growing need to produce seafood from offshore environments creates a necessity for research and analysis to define and characterize the environments currently described as offshore and create a framework for industry members to understand and describe ocean environments effectively The research topic seeks to create a framework for describing aquaculture environments in the context of distance from shore and ocean energy as well as explore how these two parameters impact aquaculture technology operations regulation and economics Submissions should add to the understanding of offshore or open ocean aquaculture farms specifically in the context of the environment in which they operate A focus will be on creating definitions for the terms offshore open ocean and high energy in the context of marine farming such that these terms can be used more effectively in the future
