Primate Ovary:

The Primate Ovary Richard Stouffer, 2013-03-09 This 1987 ORPRC Symposium on Primate Reproductive Biology the third in a series marked the twenty fifth anniversary of the Oregon Regional Primate Research Center ORPRC In organizing these symposia we have emphasized the dedication of many ORPRC staff members to research with nonhuman primates as models for human reproduction The first symposium in this series organized by William Montagna was held in May 1981

Appropriately for a beginning series its topic was fetal endocrinology The subject of this year s symposium was the primate ovary and as in the past scientists from around the world including Sweden Scotland England West Germany and India met in Beaverton Oregon to exchange ideas and information on this important aspect of reproduction The international scope of the symposium reflects our belief that both the problems and their solutions extend beyond national boundaries Many of the nonhuman primates that we rely on as models are endangered as civilization through population pressure encroaches on their natural habitats Without a deeper understanding of how primate reproduction is regulated and without the control over human population that such an understanding can bring the quality of life for all primate species may well become substantially diminished Consequently we dedicate these symposia to the thesis that a deeper understanding of primate reproductive biology will ultimately improve all primate life Robert M Brenner Charles H Phoenix vii PREFACE Today there is renewed interest in the processes controlling the gametogenic and endocrine functions of the ovary

Responses to Environmental Change H.O. Box, 2012-12-06 This book concerns the various ways that primates respond to environmental change By studying these patterns of responsiveness we not only gain useful knowledge about the structural physiological and behavioural propensities of different species but also acquire important information relating to issues of contemporary concern such as conservation and the management of animals in the wild as well as in various forms of captivity For example there is growing concern among biologists and conservationists about the influence of habitat destruction such as logging on the fitness and survival of wild primates There is also increased awareness of the need to improve the care of primates in zoos and laboratories including the enrichment of captive environments Further because an increasing number of primate species are becoming endangered knowledge of their responsiveness to new environments is an essential requirement for effective breeding programmes in captivity and for the translocation and rehabilitation of species in the wild In theory studies of many closely related species are required in order to consider relevant evolutionary

processes as well as to develop functional hypotheses about the adaptive significance of various biological propensities and their interrelationships in the short and longer terms
