Challenges and Solution Nitish Kumar, Amrit Kumar Jha, 2023-08-08 This book delivers an outline to graduate undergraduate students and researchers as well as academicians who are working on lead toxicity with respect to remediation. It covers sources of lead contamination and its impact on human health and on prospective remediation through multi-disciplinary approaches with application of recent advanced biological technology. Lead is among the elements that have been most extensively used by man over time. This has led to extensive pollution of surface soils on the local scale mainly associated with mining and smelting of the metal and addition of organic lead compounds to petrol. Release of lead to the atmosphere from various high temperature processes has led to surface contamination on the regional and even global scale. In addition, plants grown on lead-rich soils incorporate lead and thus the concentration of lead in crop plants may be increased. Lead enters in the food chain through consumption of plant material. A high concentration of lead has been found to be harmful to vegetation. As the lead concentration increases, it adversely affects several biological parameters and eventually renders the soil barren. This edited book brings together a diverse group of researchers to address the challenges posed by global mass poisoning caused by lead contamination of soil and plants. The book sheds light on this global environmental issue and proposes solutions to contamination through multi-disciplinary approaches. This book contains three sections. The first section describes the different sources and distribution of lead in soil and plant ecosystems. The second section explains the health risks linked to lead toxicity. The third section addresses sustainable lead toxicity mitigation strategies and the potential applications of recent biological technology in providing solutions. This book is a valuable resource to students, academics, researchers, and environmental professionals doing fieldwork on lead contamination throughout the world. Wildhood Barbara Natterson-Horowitz, Kathryn Bowers, 2019-09-17 Publishers Weekly Most Anticipated Books of Fall 2019 A New York Times Editor's Pick People's Best Books Fall 2019 Chicago Tribune 28 Books You Need to Read Now Booklist's Top Ten Sci-Tech Books of 2019 It blew my mind to discover that teenage animals and teenage humans are so similar. Both are naive risk takers. I loved this book. Temple Grandin, author of *Animals Make Us Human* and *Animals in Translation*, a revelatory investigation of human and animal adolescence and young adulthood from the New York Times bestselling authors of *Zoobiquity*. With *Wildhood*, Harvard evolutionary biologist Barbara Natterson-Horowitz and award-winning science writer Kathryn Bowers have created an entirely new way of thinking about the crucial, vulnerable, and exhilarating phase of life between childhood and adulthood across the animal kingdom. In their critically acclaimed bestseller *Zoobiquity*, the authors revealed the essential connection between human and animal health. In *Wildhood*, they turn the same eye-opening species-spanning lens to adolescent/young adult life. Traveling around the world and drawing from their latest research, they find that the same four universal challenges are faced by every adolescent human and animal on earth: how to be safe, how to navigate hierarchy, how to court potential mates, and how to feed oneself. Safety, Status, Sex, Self-reliance. How human and animal adolescents and young adults confront the challenges of wildhood shapes their adult destinies. Natterson-Horowitz and

Bowers illuminate these core challenges through the lives of four animals in the wild Ursula a young king penguin Shrink a charismatic hyena Salt a matriarchal humpback whale and Slavc a roaming European wolf Through their riveting stories and those of countless others from adventurous eagles and rambunctious high schooler to inexperienced orcas and naive young soldiers readers get a vivid and game changing portrait of adolescent young adults as a horizontal tribe sharing behaviors and challenges setbacks and triumphs Upending our understanding of everything from risk taking and anxiety to the origins of privilege and the nature of sexual coercion and consent Wildhood is a profound and necessary guide to the perilous thrilling and universal journey to adulthood on planet earth *Chemical Defense in Nature* Vladimir V.

Joshi, 2019-10-18 The main effects of Seaweed extracts *Ascophyllum*, *Fucus*, *Sargassum*, *Saccorhiza*, *Laminaria*, *Gelidium* and others when used as agricultural fertilizers are better seed germination and higher quality fruit production with longer shelf life, better use of soil nutrients, more productive crops and plants with greater resistance to unfavorable environmental conditions. Algae also have a long history of use as animal feed. They have a highly variable composition depending on the species, collection season and habitat and on external conditions such as water temperature, light intensity and nutrient concentration in water. In relation to ruminal fermentation, a high variability of the digestibility values was found among seaweed species and cannot be attributed only to the composition of different nutrients of the algae. The role of marine algae for reduction of methane production is discussed with particular emphasis on novel algae-based feed strategies that target minimal methane emissions without affecting the functionality of the microbiota and overall animal productivity.
