Advances in Data Management Zbigniew W Ras, Agnieszka

Dardzinska, 2009-10-27 Data Management is the process of planning coordinating and controlling data resources More often applications need to store and search a large amount of data Managing Data has been continuously challenged by demands from various areas and applications and has evolved in parallel with advances in hardware and computing techniques This volume focuses on its recent advances and it is composed of five parts and a total of eighteen chapters The first part of the book contains five contributions in the area of information retrieval and Web intelligence a novel approach to solving index selection problem integrated retrieval from Web of documents and data bipolarity in database querying deriving data summarization through ontologies and granular computing for Web intelligence The second part of the book contains four contributions in knowledge discovery area Its third part contains three contributions in information integration and data security area The remaining two parts of the book contain six contributions in the area of intelligent agents and applications of data management in medical domain

Deconvolution of Images and Spectra Peter A. Jansson, 2014-05-05

Deconvolution is a technique in signal or image processing that is applied to recover information When it is employed it is usually because instrumental effects of spreading and blurring have obscured that information In 1996 Deconvolution of Images and Spectra was published Academic Press as a second edition of Jansson's 1984 book Deconvolution with Applications in Spectroscopy This landmark volume was first published to provide both an overview of the field and practical methods and results The present Dover edition is a corrected reprinting of the second edition It incorporates all the advantages of its predecessors by conveying a clear understanding of the field while providing a selection of effective practical techniques The authors assume only a working knowledge of calculus and emphasize practical applications over topics of theoretical interest focusing on areas that have been pivotal to the evolution of the most effective methods This tutorial is essentially self contained Readers will find it practical and easy to understand

Innovations in Multi-Agent Systems and Application - 1 Dipti Srinivasan, 2010-08-10 This book provides an overview of multi agent systems and several applications that have been developed for real world problems Multi agent systems is an area of distributed artificial intelligence that emphasizes the joint behaviors of agents with some degree of autonomy and the complexities arising from their interactions Multi agent systems allow the subproblems of a constraint satisfaction problem to be subcontracted to different problem solving agents with their own interest and goals This increases the speed creates parallelism and reduces the risk of system collapse on a single point of failure Different multi agent architectures that are tailor made for a specific application are possible They are able to synergistically combine the various computational intelligent techniques for attaining a superior performance This gives an opportunity for bringing the advantages of various techniques into a single framework It also provides the freedom to model the behavior of the system to be as competitive or coordinating each having its own advantages and disadvantages

Classic Works of the Dempster-Shafer Theory of Belief Functions Ronald R.

Yager, Liping Liu, 2008-01-22 This is a collection of classic research papers on the Dempster Shafer theory of belief functions. The book is the authoritative reference in the field of evidential reasoning and an important archival reference in a wide range of areas including uncertainty reasoning in artificial intelligence and decision making in economics, engineering, and management. The book includes a foreword reflecting the development of the theory in the last forty years. **Flexible Approaches in Data, Information and Knowledge Management** Olivier Pivert, Sławomir Zadrozny, 2013-09-12 This volume showcases contributions from internationally known researchers in the field of information management. Most of the approaches presented here make use of fuzzy logic introduced by L. A. Zadeh almost 50 years ago, which constitute a powerful tool to model and handle gradual concepts. What all of these contributions have in common is placing the user at the center of the information system, be it for helping him/her to query a data set, to handle imperfect information, or to discover useful knowledge from a massive collection of data. Researchers working in data and knowledge management will greatly benefit from this collection of up-to-date studies. This may be also an invaluable source of information for postgraduate students interested in advanced information management techniques.
