Secondary Cohomology Operations:

The Factorization of Cyclic Reduced Powers by Secondary Cohomology Operations Arunas Liulevicius, 1962 **The Algebra of Secondary Cohomology Operations**, 2006 *Secondary Cohomology Operations* John R. Harper, 1900 The book develops the theory of secondary cohomology operations for singular cohomology theory The author develops the subject in terms of elementary constructions from general homotopy theory Among many applications considered are the Hopf invariant one theorem for all primes p including $p = 2$ Browder's theorem on higher Bockstein operations and cohomology theory of Massey-Peterson fibrations Numerous examples and exercises help readers to gain a working knowledge of the theory A summary of more advanced parts of the core material is included in the first chapter Prerequisite is basic algebraic topology including the Steenrod operations The book is written for graduate students and research mathematicians interested in algebraic topology and can be used for self study or as a textbook for an advanced course on the topic [The Algebra of Secondary Cohomology Operations](#) Hans-Joachim Baues, 2006-06-12 The algebra of primary cohomology operations computed by the well known Steenrod algebra is one of the most powerful tools of algebraic topology This book computes the algebra of secondary cohomology operations which enriches the structure of the Steenrod algebra in a new and unexpected way The book solves a long standing problem on the algebra of secondary cohomology operations by developing a new algebraic theory of such operations The results have strong impact on the Adams spectral sequence and hence on the computation of homotopy groups of spheres *Stable Secondary Cohomology Operations* John R. Harper, 1967

Secondary Cohomology Operations Induced by the Diagonal Mapping Paul A. Schweitzer, 1962 **The Factorization of Cyclic Reduces Powers by Secondary Cohomology Operations** Arunas Liulevicius, 1962 **The Algebra of Secondary Cohomology Operations and Its Dual** Hans Joachim Baues, Mamuka Jibladze, 2004 **The Factorization of Cyclic Reduced Powers by Secondary Cohomology Operations**, 1962-12-30 *Homotopical Topology* Anatoly Fomenko, Dmitry Fuchs, 2016-06-24 This textbook on algebraic topology updates a popular textbook from the golden era of the Moscow school of I. M. Gelfand The first English translation done many decades ago remains very much in demand although it has been long out of print and is difficult to obtain Therefore this updated English edition will be much welcomed by the mathematical community Distinctive features of this book include a concise but fully rigorous presentation supplemented by a plethora of illustrations of a high technical and artistic caliber a huge number of nontrivial examples and computations done in detail a deeper and broader treatment of topics in comparison to most beginning books on algebraic topology an extensive and very concrete treatment of the machinery of spectral sequences The second edition contains an entirely new chapter on K theory and the Riemann-Roch theorem after Hirzebruch and Grothendieck **Functional Cohomology Operations and Secondary Characteristic Classes** Robert Einsohn Mosher, 1962 **A User's Guide to Spectral Sequences** John McCleary, 2001 Spectral sequences are among the most elegant and powerful methods of computation in mathematics This

book describes some of the most important examples of spectral sequences and some of their most spectacular applications. The first part treats the algebraic foundations for this sort of homological algebra starting from informal calculations. The heart of the text is an exposition of the classical examples from homotopy theory with chapters on the Leray Serre spectral sequence, the Eilenberg Moore spectral sequence, the Adams spectral sequence, and in this new edition, the Bockstein spectral sequence. The last part of the book treats applications throughout mathematics including the theory of knots and links, algebraic geometry, differential geometry, and algebra. This is an excellent reference for students and researchers in geometry, topology, and algebra.

Cohomology Operations and Applications in Homotopy Theory Robert E. Mosher, Martin C. Tangora, 2008-01-01 Cohomology operations are at the center of a major area of activity in algebraic topology. This treatment explores the single most important variety of operations, the Steenrod squares. It constructs these operations, proves their major properties, and provides numerous applications including several different techniques of homotopy theory useful for computation. 1968 edition

Encyclopaedia of Mathematics M. Hazewinkel, 2013-12-01 [Handbook of Homotopy Theory](#) Haynes Miller, 2020-01-23 The Handbook of Homotopy Theory provides a panoramic view of an active area in mathematics that is currently seeing dramatic solutions to long standing open problems and is proving itself of increasing importance across many other mathematical disciplines. The origins of the subject date back to work of Henri Poincaré and Heinz Hopf in the early 20th century, but it has seen enormous progress in the 21st century. A highlight of this volume is an introduction to and diverse applications of the newly established foundational theory of categories. The coverage is vast, ranging from axiomatic to applied, from foundational to computational, and includes surveys of applications both geometric and algebraic. The contributors are among the most active and creative researchers in the field. The 22 chapters by 31 contributors are designed to address novices as well as established mathematicians interested in learning the state of the art in this field whose methods are of increasing importance in many other areas.

Encyclopaedia of Mathematics Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics. It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985. The annotated translation consists of ten volumes including a special index volume. There are three kinds of articles in this ENCYCLOPAEDIA. First of all, there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole, these articles should be understandable to mathematics students in their first specialization years, to graduates from other mathematical areas, and depending on the specific subject, to specialists in other domains of science, engineers, and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems, techniques, and concepts involved in the area in question.

They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques Homotopy Theory: Tools and Applications Daniel G. Davis,2019-05-30 This volume contains the proceedings of the conference Homotopy Theory Tools and Applications in honor of Paul Goerss s 60th birthday held from July 17 21 2017 at the University of Illinois at Urbana Champaign Urbana IL The articles cover a variety of topics spanning the current research frontier of homotopy theory This includes articles concerning both computations and the formal theory of chromatic homotopy different aspects of equivariant homotopy theory and K theory as well as articles concerned with structured ring spectra cyclotomic spectra associated to perfectoid fields and the theory of higher homotopy operations *Cartan Formulae for Secondary Twisted Cohomology Operations* Philip Douglas Straffin,1971 **A History of Algebraic and Differential Topology, 1900 - 1960** Jean Dieudonné,2009-09-01 This book is a well informed and detailed analysis of the problems and development of algebraic topology from Poincar and Brouwer to Serre Adams and Thom The author has examined each significant paper along this route and describes the steps and strategy of its proofs and its relation to other work Previously the history of the many technical developments of 20th century mathematics had seemed to present insuperable obstacles to scholarship This book demonstrates in the case of topology how these obstacles can be overcome with enlightening results Within its chosen boundaries the coverage of this book is superb Read it MathSciNet **Geometric Applications of Homotopy Theory II** M.G.
