Inferior Angela Saini,2017-05-30 What science has gotten so shamefully wrong about women and the fight by both female and male scientists to rewrite what we thought we knew For hundreds of years it was common sense women were the inferior sex Their bodies were weaker their minds feeblers their role subservient No less a scientist than Charles Darwin asserted that women were at a lower stage of evolution and for decades scientists most of them male of course claimed to find evidence to support this Whether looking at intelligence or emotion cognition or behavior science has continued to tell us that men and women are fundamentally different Biologists claim that women are better suited to raising families or are more gently uniquely empathetic Men on the other hand continue to be described as excelling at tasks that require logic spatial reasoning and motor skills But a huge wave of research is now revealing an alternative version of what we thought we knew The new woman revealed by this scientific data is as strong strategic and smart as anyone else In **Inferior** acclaimed science writer Angela Saini weaves together a fascinating and sorely necessary new science of women As Saini takes readers on a journey to uncover science s failure to understand women she finds that we re still living with the legacy of an establishment that s just beginning to recover from centuries of entrenched exclusion and prejudice Sexist assumptions are stubbornly persistent even in recent years researchers have insisted that women are choosy and monogamous while men are naturally promiscuous or that the way men s and women s brains are wired confirms long discredited gender stereotypes As Saini reveals however groundbreaking research is finally rediscovering women s bodies and minds **Inferior** investigates the gender wars in biology psychology and anthropology and delves into cutting edge scientific studies to uncover a fascinating new portrait of women s brains bodies and role in human evolution
