Radar Signal Analysis and Processing Using MATLAB Bassem R. Mahafza, 2008-06-19 Offering radar related software for the analysis and design of radar waveform and signal processing Radar Signal Analysis and Processing Using MATLAB provides a comprehensive source of theoretical and practical information on radar signals signal analysis and radar signal processing with companion MATLAB code After an overview of radar systems operation and design the book reviews

elements of signal theory relevant to radar detection and radar signal processing along with random variables and processes. The author then presents the unique characteristic of the matched filter and develops a general formula for the output of the matched filter that is valid for any waveform. He analyzes several analog waveforms including the linear frequency modulation pulse and stepped frequency waveforms as well as unmodulated pulse train binary polyphase and frequency codes. The book explores radar target detection and pulse integration emphasizing the constant false alarm rate. It also covers the stretch processor, the moving target indicator radar, Doppler processing, beamforming, and adaptive array processing. Using configurable MATLAB code, this book demonstrates how to apply signal processing to radar applications. It includes many examples and problems to illustrate the practical application of the theory. *Highly Integrated Low Power Radars* Sergio Saponara, Maria Greco, Egidio Ragonese, Giuseppe Palmisano, Bruno Neri, 2014-06-01. In recent years, advances in radio detection and ranging technology, sustained by new achievements in the fields of signal processing and electronic components, have permitted the adoption of radars in many civil and defense applications. This resource discusses how highly integrated radar has been adopted by several new markets such as contactless vital sign monitoring, heart rate, breath rate, or harbour traffic control, as well as several applications for vehicle driver assistance. You are provided with scenarios, applications, and requirements while focusing on the trade-offs between flexibility, programmability, power consumption, size, and weight, and complexity. Space-Time Adaptive Processing for Radar, Second Edition J.R. Guerci, 2014-11-01. Space-time adaptive processing (STAP) is an exciting technology for advanced radar systems that allows for significant performance enhancements over conventional approaches. Based on a time-tested course taught in industry, government, and academia, this second edition reviews basic STAP concepts and methods, placing emphasis on implementation in real-world systems. It addresses the needs of radar engineers who are seeking to apply effective STAP techniques to their systems and serves as an excellent reference for non-radar specialists with an interest in the signal processing applications of STAP. Engineers find the analysis tools they need to assess the impact of STAP on a variety of important radar applications. A toolkit of STAP algorithms and implementation techniques allows practitioners the flexibility of adapting the best methods to their application. In addition, this second edition adds brand new coverage on STAP on Transmit and Knowledge Aided STAP (KA-STAP). **Handbook of Radar Signal Analysis** Bassem R. Mahafza, Scott C. Winton, Atef Z. Elsherbeni, 2021-08-16. This new handbook on radar signal analysis adopts a deliberate and systematic approach. It uses a clear and consistent level of delivery while maintaining strong and easy-to-follow mathematical details. The emphasis of this book is on radar signal types and their relevant signal processing, and not on radar systems hardware or components. This handbook serves as a valuable reference to a wide range of audience. More specifically, college-level students practicing radar engineers, as well as casual readers of the subject, are the intended target audience of the first few chapters of this book. As the book chapters progress, these grow in complexity and specificity. Accordingly, later chapters are intended for practicing engineers, graduate college students, and

advanced readers Finally the last few chapters contain several special topics on radar systems that are both educational and scientifically entertaining to all readers The presentation of topics in this handbook takes the reader on a scientific journey whose major landmarks comprise the different radar subsystems and components In this context the chapters follow the radar signal along this journey from its birth to the end of its life Along the way the different relevant radar subsystems are analyzed and discussed in great detail The chapter contributors of this new handbook comprise experienced academia members and practicing radar engineers Their combined years of academic and real world experiences are in excess of 175 Together they bring a unique easy to follow mix of mathematical and practical presentations of the topics discussed in this book See the Chapter Contributors section to learn more about these individuals
