Oceanographic Applications of Remote Sensing Motoyoshi Ikeda, 1995-09-18 Oceanographic Applications of Remote Sensing describes how remotely sensed data fields can be applied to help solve problems in ocean related studies This timely reference written by and for oceanographers emphasizes the application of data to particular physical chemical and biological processes related to the ocean and the ocean atmosphere system The organization of the book reflects this emphasis with chapters arranged by process rather than by sensor characteristics Oceanographic Applications of Remote Sensing contains comprehensive information on the application of such relevant data sets as sea surface temperature and topography ocean circulation sea level variability wind speed and stress wave height solar radiation flux at ocean surfaces and sea ice characteristics and ice motion It also discusses the reliability of remotely sensed data and provides information about the applicability of the various data sets to particular process studies Its completeness and relevance makes Oceanographic Applications of Remote Sensing an important reference for modern studies of ocean and coupled ocean atmosphere processes Its unique coverage of the physics that govern satellite processes and their applications to oceanography ensures that it will remain an important reference as new satellites are introduced

Applications of Radar Remote Sensing in China Guo Huadong, 2001-07-12 Over the last decade the field of spaceborne imaging radar remote sensing has advanced to the point where many new applications have become possible Synthetic aperture radar with its all weather and day night capability has become one of the most sophisticated technologies for earth and planetary observation The deployment of advanced experimental systems has allowed radar imaging data to feed into the analysis of environmental and geophysical problems whether agricultural land use forestry hydrology geology mineral exploration urbanization archaeology natural hazards oceanography or global change This atlas provides a set of examples of high quality remote

sensing work carried out with this leading technology in China under the auspices of the Institute of Remote Sensing Applications of the Chinese Academy of Sciences and in collaboration with the USA European Space Agency Japan and the former USSR These examples are discussed compared with ground truth and analyzed It includes applications data analysis algorithm development modeling and backscatter behavior analysis

Principles of Modern Radar Jerry Eaves, Edward Reedy, 2012-12-06 This book *Principles of Modern Radar* has as its genesis a Georgia Tech short course of the same title This short course has been presented annually at Georgia Tech since 1969 and a very comprehensive set of course notes has evolved during that seventeen year period The 1986 edition of these notes ran to 22 chapters and all of the authors involved except Mr Barrett were full time members of the Georgia Tech research faculty After considerable encouragement from various persons at the university and within the radar community we undertook the task of editing the course notes for formal publication The contents of the book that ensued tend to be practical in nature since each contributing author is a practicing engineer or scientist and each was selected to write on a topic embraced by his area s of expertise Prime examples are Chaps 2 5 and 10 which were authored by E F Knott G W Ewell and N C Currie respectively Each of these three researchers is recognized in the radar community as an expert in the technical area that his chapter addresses and each had already authored and published a major book on his subject Several other contributing authors including Dr Bodnar Mr Bruder Mr Corriher Dr Reedy Dr Trebits and Mr Scheer also have major book publications to their credit

Foundations for Innovative Application of Airborne Radars Alexey Nekrasov, 2013-10-09 The wind vector wind speed and direction is a main meteorological quantity and relevant for air sea exchange processes This book explores the use of several airborne microwave instruments some of which are part of standard aircraft equipment in determining the local wind vector over water This is worthwhile as local wind information is usually only available at measurements sites like weather stations and airports and global wind information from satellites has very coarse resolution and poor temporal coverage at most a few times daily In his book Nekrasov uses known results in a novel way and gives explicit and application oriented descriptions how to additionally retrieve local wind information from standard airborne microwave instruments The results presented here are highly valuable for flight operation above the sea e g search and rescue but also for complementing other measurements of atmospheric or oceanic parameters during research flights

Observation of the Earth and its Environment Herbert J. Kramer, 2013-03-09 The following listing represents a survey and a short description of Earth Observing Missions in alphabetical order The listing in Part A considers completed operational as well as planned missions on an international scale Earth observations from space know no national boundaries A look into past activities is important for reasons of heritage context and of perspective The document is intended for all who want to keep track of missions and sensors in the fast growing field of Earth observations There cannot

be any claim to completeness although a considerable effort was made to collect and integrate all known missions and sensors into this book Earth observation by remote sensing changes our view and perception of the world We begin to realize the global character of remote sensing its multidimensional and complementary nature its vast potential to many disciplines its importance to mankind as a whole Remote sensing permits for the first time in history a total system view of the Earth The view from space toward Earth has brought about sweeping revisions in the Earth sciences in particular in such fields as meteorology oceanology hydrology geology geography forestry agriculture geodynamics solar terrestrial interactions and many others The Aeronautical Journal ,1983 *Principles of Integrated Maritime Surveillance Systems* A. Nejat Ince,2000 Information is always required by organizations of coastal states about the movements identities and intentions of vessels sailing in the waters of interest to them which may be coastal waters straits inland waterways rivers lakes or open seas This interest may stem from defense requirements or from needs for the protection of off shore resources enhanced search and rescue services deterrence of smuggling drug trafficking and other illegal activities and or for providing vessel traffic services for safe and efficient navigation and protection of the environment To meet these needs it is necessary to have a well designed maritime surveillance and control system capable of tracking ships and providing other types of information required by a variety of user groups ranging from port authorities shipping companies marine exchanges to governments and the military *Principles of Integrated Maritime Surveillance Systems* will be of vital interest to anyone responsible for the design implementation or provision of a well designed maritime surveillance and control system capable of tracking ships and providing navigational and other types of information required for safe navigation and efficient commercial operation *Principles of Integrated Maritime Surveillance Systems* is therefore essential to a variety of user groups ranging from port authorities to shipping companies and marine exchanges as well as civil governments and the military *Millimeter-wave and Infrared Multisensor Design and Signal Processing* Lawrence A. Klein,1997 Here is a practical non theoretical introduction to the principles applications and benefits of multi sensor technology used in smart weapon development surveillance systems and an increasing variety of non military applications This book provides a broad overview of MMW millimeter wave and IR infrared sensor constraints design principles system alternatives and targeting applications and is unique in its coverage of integrated MMW and IR multisensor design Academic Press Library in Signal Processing Fulvio Gini,Nikolaos D.
