Rationality And Ethics In Agriculture:

Rationality and Ethics in Agriculture Hugh Lehman, 1995 Distributed by the University of Nebraska Press for the University of Idaho Press Explores contemporary social criticism of agriculture by analyzing assumptions regarding matters such as animal welfare biotechnology ethics and human nature Dr Lehman carefully investigates the various meanings and criteria of rational without presupposing prior knowledge of philosophy making the material accessible to students agriculture scientists and members of the public concerned with agriculture

Agriculture's Ethical Horizon Robert L. Zimdahl, 2012-01-30 The second edition of Agriculture's Ethical Horizon is a carefully considered application of philosophical concepts such as utilitarianism and positivism to the practice of agricultural science Author Robert Zimdahl argues for an approach to agriculture guided by foundational values and addresses the questions What are the goals of agricultural and weed science What should their goals be How do and how should the practitioners of agriculture address complex ethical questions This book engages students researchers and professionals across disciplines including horticulture soil and plant science entomology and more all without requiring a background in philosophy It examines topics such as scientific truth and myth moral confidence in agriculture the relevance of ethics to sustainability and biotechnology New to this edition is a chapter examining the raising housing and slaughter of animals for human food and a chapter on alternative and organic agricultural systems Easily understood by non philosophers Chapter sidebars highlight important concepts and can be used to engage students in further discussion Companion website includes further teaching aids and a discussion board

Agricultural Ethics - An Invitation Robert L. Zimdahl, 2020-08-13 I write because I am concerned that I and my agricultural colleagues have avoided addressing the moral dimension of the environmental and social problems we have contributed to I hope for an exchange of ideas about agriculture's moral dilemmas I encourage my readers to engage in a collective conversation about the dilemmas and avoid remaining in what Merton calls the collective arrogance and despair of his own herd If those engaged in agriculture continue to ignore and fail to realize our common difficulties they will be addressed and resolved by societal pressure and political action which may not yield the resolution we favor The book's goal is not to resolve the moral dilemmas raised It is to raise them and encourage thought and discussion It will ask but not answer why nearly all involved in agriculture have not addressed the moral concerns voiced by the general public The agricultural enterprise is committed to the benefits and future success of the present very productive chemical capital and energy intensive system which is in the minds of many not sustainable The internal justification invokes the moral claim that they feed the world's population The question remains whether or not the prevailing moral justification of feeding the world is adequate given all the issues modern developed country agriculture faces pesticides in soil water and food cruelty to animals Biotech GMO's corporate agriculture pollution by animal factory waste exploitation of and cruelty to migrant labor

Routledge Handbook of Landscape and Food Joshua Zeunert, Tim Waterman, 2018-02-02 Since the turn of the millennium there has been a burgeoning interest in and literature of both landscape studies and food studies Landscape describes places as relationships and processes Landscapes create people s identities and guide their actions and their preferences while at the same time are shaped by the actions and forces of people Food as currency medium and sustenance is a fundamental part of those landscape relationships This volume brings together over fifty contributors from around the world in forty profoundly interdisciplinary chapters Chapter authors represent an astonishing range of disciplines from agronomy anthropology archaeology conservation countryside management cultural studies ecology ethics geography heritage studies landscape architecture landscape management and planning literature urban design and architecture Both food studies and landscape studies defy comprehension from the perspective of a single discipline and thus such a range is both necessary and enriching The Routledge Handbook of Landscape and Food is intended as a first port of call for scholars and researchers seeking to undertake new work at the many intersections of landscape and food Each chapter provides an authoritative overview a broad range of pertinent readings and references and seeks to identify areas where new research is needed though these may also be identified in the many fertile areas in which subjects and chapters overlap within the book

Wounded Planet Henk A.M.J. ten Have, 2019-05-14 Exploring the interconnectedness of human health biodiversity and bioethics We all depend on environmental biodiversity for clean air safe water adequate nutrition effective drugs and protection from infectious diseases Today s healthcare experts and policymakers are keenly aware that biodiversity is one of the crucial determinants of health not only for individuals but also for the human population of the planet Unfortunately rapid globalization and ongoing environmental degradation mean that biodiversity is rapidly deteriorating threatening planetary health on a mass scale In Wounded Planet Henk A M J ten Have argues that the ethical debate about healthcare has become too narrow and individualized We must he writes adopt a new bioethical discourse one that deals with issues of justice equality vulnerability human rights and solidarity in order to adequately reflect the serious threat that current loss of biodiversity poses to planetary health Exploring modern

environmental challenges in depth ten Have persuasively demonstrates that environmental concerns can no longer be separated from healthcare challenges and thus should be included in global bioethics Going beyond an individualized perspective he poses audacious questions What does it mean that patients are poor or uninsured and cannot afford suggested medicines How can we deal with the air and water pollution that are producing a patient s illness How do we respond to patients complaining about the safety and quality of drinking water in their neighborhood Touching on infectious and noncommunicable diseases as well as food medicine and water Wounded Planet transcends the limited vision of mainstream bioethics to compassionately reveal how healthcare and medicine must take a broad perspective that includes the social and environmental conditions in which individuals live

Technology, Transgenics and a Practical Moral Code Dennis R. Cooley,2009-09-28 Most philosophers still like to feel that they have a special subject matter well insulated from anything that the social scientists and scientists in general have to tell them That is not healthy for philosophy and it is all too likely to lead to an ethics that continues as of old to plead for its ultimates the fact that one is totally ineffectual being decently concealed by an impressive terminology Stevenson 1963 pp 114 5 Many so called moral theories do not even attempt to explain or justify common morality but are used to generate guides to conduct intended to replace common morality These p posed moral guides those generated by all of the standard consequentialist contractarian and deontological theories are far simpler than the common moral system and sometimes yield totally unacceptable answers to moral problems Since these philosophers who put forward these theories have usually dismissed common morality as confused they are c pletely unaware of the complexity involved in making moral decisions and judgments It is not surprising that many who take morality seriously and try to apply it to real problems faced by actual people are so critical of moral theory Bernard Gert 1998 p 6 As both Stevenson and Gert note ethics requires social and other sciences for by its very nature ethics is a practical enterprise

The Problem of Bureaucratic Rationality Junko Kato,1994-10-31 Through a detailed account of the political battles over Japanese tax reform during the last two decades Junko Kato draws an unconventional portrait of bureaucratic motivation showing how fiscal bureaucrats exploit their unique technical knowledge to influence policymaking Rejecting the notion that the monopolization of policy expertise leads to bureaucratic domination Kato contends that bureaucrats seek to increase their influence upon politicians by strategically sharing information She also explores the reason for the relative strength of the bureaucratic organization in comparison to the governing party whose interest in reelections and intra party politics may pose dilemmas for individual politicians In 1989 the Japanese Diet enacted a broad based consumption tax after two failed attempts and in the face of widespread public

disapproval Its passage was all the more remarkable for coming just as a series of dramatic financial scandals had begun to undermine popular support for the ruling Liberal Democratic Party fore shadowing its fall from power four years later Kato argues that skillful maneuvering by the Ministry of Finance determined to ensure stable long term revenues was decisive in persuading a majority of legislators to oppose their constituents in endorsing an unpopular program of tax reform Her careful analysis of the Japanese case holds important implications for the study of bureaucratic power and public policy in advanced industrial democracies elsewhere in East Asia and the West

Ethical futures: bioscience and food horizons Kate Millar, Pru Hobson West, Brigitte Nerlich, 2023-09-04 In an ever changing interconnected world the agriculture and food system faces constant challenges in many forms such as the impacts of climate change uncertainty surrounding the use of novel technologies and the emergence of new zoonotic diseases Alongside these challenges professionals working in the food system are faced with opportunities to improve food production and distribution As decision makers attempt to balance these threats and opportunities in order to secure more sustainable production systems the key question that arises is What do we envisage as the future for agriculture and food production With numerous voices advocating different and sometimes conflicting approaches ranging from organic farming to wider use of GMOs through in vitro meat production this discussion of the future raises significant ethical questions The contributions in this book bring together a diverse group of authors who explore a set of themes relating to the ethical dimensions of the agriculture and food futures including the role of novel technologies the potential issues raised by the use of biofuels the ethics of future animal production systems concepts of global food security as well as chapters on food governance priorities and educational aspects It is intended that this volume serves as an interesting collection and acts as a source of stimulation that will contribute to wider debate and reflection on the future of the agriculture and food system
