Rationality In Science:

The Rationality of Science W.H. Newton-Smith, 2002-02-07 A clear original and systematic introduction to philosophy of science which examines the theories of Popper Lakatos Kuhn and Feyerabend before proposing a new temperate rationalist perspective

[The Rationality of Science](#) William H. Newton-Smith, 1983 [Rationality in Science](#) R.

Hilpinen, 2012-12-06 The present volume is a product of an international research program Foundations of Science and Ethics launched in 1976 by the Inter University Centre of Post Graduate Studies Dubrovnik Yugoslavia with the financial support of the Volkswagen Foundation According to the outline of the program formulated in 1976 by a committee consisting of Professors Dagfinn Føllesdal Rudolf Haller coordinator Lorenz Krüger Karel Lambert Keith Lehrer Kuno Lorenz Günther Patzig Ivan Supek and Paul Weingartner its general purpose was to investigate the interplay of various internal and external factors in the development of science Generous financial support from the Volkswagen Foundation made it possible to plan four annual conferences the first of which was held in Dubrovnik on March 6-12 1978 This volume contains the majority of the papers presented in the first Dubrovnik conference the main theme of this conference was Rationality in Science and Ethics Some of the papers appear here in a thoroughly revised form Further results of the research program will be discussed in three other conferences to be held in Dubrovnik in 1979 1981 the papers presented in these conferences will be published separately Professor Rudolf Haller of the University of Graz assumed the burden of the practical planning and organization of the first conference as well as that of the other three conferences I wish to thank Professor Haller on behalf of all participants for carrying out this demanding and time consuming task **The Rationality of Science** W. H.

Newton-Smith, 1981 **Rationality in Science and Politics** G. Andersson, 2012-12-06 This remarkable collection of essays diverse but united by the theme of critical reasoning testifies to the attention and respect paid by the authors to the philosophical career of Gerard Radnitzky We too greet Professor Radnitzky for his decades of intellectual labor devoted to the establishment of rational analysis of human problems Not least of his concerns has been to understand what it is to be rational to disentangle the apparently rational and the genuine to separate dogma from justified belief to cherish imagination while seeking its test If Radnitzky has long been known for his careful elaboration of the spectrum of modern approaches to epistemology those who have gathered to celebrate his work in this volume will also be widely known for their own writings on this matter of critical methodology Their signposts or are they warning lights will be familiar to thoughtful philosophers and scientists and they appear as queries as we read these papers the rational heuristic and the irrational heuristic accepting the fallible differing societies but one rational cognitive practice accepting evidence which is placebogenic choosing among the incommensurables what remains of the logic of demarcation purpose in nature progress of science rationality in politics a humane reasonableness and a critical rationalism Gunnar Andersson sets the focus well for the reader We need not choose between dogmatism and relativism he argues And then he tells the political lesson we might avoid both anarchy and

despotism **Rationality in Science, Religion, and Everyday Life** Mikael Stenmark, 2016-09-15 Mikael Stenmark examines four models of rationality and argues for a discussion of rationality that takes into account the function and aim of such human practices as science and religion **The Problem of Rationality in Science and its Philosophy** J. Misiek, 2012-12-06 Rationality of science was the topic of two conferences held in 1988 and 1989 organized by the Department of Philosophy of Science Institute of Philosophy Jagiellonian University Both conferences included a small group of invited speakers This book contains a selection of papers presented there It is intended mainly for specialists in the philosophy of science and scientists interested in philosophy Students and especially postgraduate students would also benefit from reading it The first conference Popper Polanyi and the Notion of Rationality was held from 1 to 5 October 1988 in Janowice The second conference The Aim and Rationality of Science was held in Cracow at the Jagiellonian University from 4 to 10 June 1989 The topics of both conferences were inspired by our late friend Dr Tomasz Kocowski who many years earlier invited me and my colleagues from the Department to participate in research concerning the problem of creativity and serve him and other psychologists as methodological advisors Personal contacts with this intelligent and inquisitive man helped us to realize that we could not fulfill our task while adhering to the received view in the philosophy of science This experience helped us to see science not only as scientific knowledge but also as a process of research We then turned our attention to Michael Polanyi who seemed to provide the philosophy we were looking for **The Problem of Rationality in Science and Its Philosophy** J. Misiek, 1994-12-31 **Using Knowledge** Ingemar Nordin, 2017 In this book Ingemar Nordin analyzes how not only scientific but also non scientific knowledge is to be used in practice when establishing a rational technological and medical development **Between History and Method** S. Amsterdamski, 2012-07-13 In this book I have tried to develop further the ideas expressed in my previous work Between Experience and Metaphysics which was published in the same series in 1975 Several years have passed since the original Polish edition and then 1 the Italian translation of this book appeared The fact that the principal ideas expressed in it have withstood as I see it the brunt of criticism has led me to remain basically with the original text Two main changes have however been introduced First I have added an Appendix containing the original version of a paper I presented at the Wissenschaftskolleg zu Berlin in June 1988 and a short postscript to that paper referring to comments made during two discussions at the Kolleg Let me briefly explain the reason for this addition In recent years the landscape for historical and philosophical interpretation of the evolution of scientific knowledge has altered The strongest of the new contenders for epistemological recognition are social constructivists who analyze in detail how knowledge is produced within specific social settings including the instruments and procedures of particular laboratories and the economic and political realities of particular scientific communities The local character of these studies raises the question of whether they can ever provide generalizable epistemological claims
