

Reactivity of Solids

Solid state chemistry deals with the study of the synthesis, structure and physical properties of solid materials and continues to play an astounding role in many disciplines.

Solid state reactions may involve one or more of the following elementary (rate-limiting) steps:

- (i) Sorption phenomena (adsorption and desorption) of gaseous species on the solid surface;
- (ii) Chemical reaction on an atomic scale (homogeneous or interphase reactions);
- (iii) Nucleation of a new phase (in the bulk or at the surface of the reacting solid);
- (iv) Transport phenomena through solids (diffusion and migration).

Solid state reactions may be classified into four categories.

(a) Reactions of single solids

Fréchet, 2013-12-14 **5th International Symposium on Ceramic Materials and Components for Engines, Shanghai, China, 29 May-1 June 1994** International Symposium on Ceramic Materials and Components for Engines 1994, Shanghai, China, 1995 The 5th of a prestigious series of conferences these proceedings are devoted to the latest achievements in ceramic materials and components for engines Their purpose is to advance structural ceramics and ceramic engine technology on a worldwide scale and provide a state of the art survey of this increasingly important field The papers presented cover many aspects from basic research and development to production properties and applications These proceedings will be of interest to ceramists and mechanical engineers concerned with the potential use of ceramic components in engines Isoconversional Kinetics of Thermally Stimulated Processes Sergey Vyazovkin, 2015-03-18 The use of isoconversional kinetic methods for analysis of thermogravimetric and calorimetric data on thermally stimulated processes is quickly growing in popularity The purpose of this book is to create the first comprehensive resource on the theory and applications of isoconversional methodology The book introduces the reader to the kinetics of physical and chemical condensed phase processes that occur as a result of changing temperature and discusses how isoconversional analysis can provide important kinetic insights into them The book will help the readers to develop a better understanding of the methodology and promote its efficient usage and successful development Index to Conferences Relating to Nuclear Science Willie E. Clark, Doris H. McGinnis, 1968 Solid Base Catalysis Yoshio Ono, Hideshi Hattori, 2012-08-31 The importance of solid base catalysts has come to be recognized for their environmentally benign qualities and much significant progress has been made over the past two decades in catalytic materials and solid base catalyzed reactions The book is focused on the solid base Because of the advantages over liquid bases the use of solid base catalysts in organic synthesis is expanding Solid bases are easier to dispose than liquid bases separation and recovery of products catalysts and solvents are less difficult and they are non corrosive Furthermore base catalyzed reactions can be performed without using solvents and even in the gas phase opening up more possibilities for discovering novel reaction systems Using numerous examples the present volume describes the remarkable role solid base catalysis can play given the ever increasing worldwide importance of green chemistry The reader will obtain an overall view of solid base catalysis and gain insight into the versatility of the reactions to which solid base catalysts can be utilized The concept and significance of solid base catalysis are discussed followed by descriptions of various methods for the characterization of solid bases including spectroscopic methods and test reactions The preparation and properties of base materials are presented in detail with the two final chapters devoted to surveying the variety of reactions catalyzed by solid bases **Nuclear Science Abstracts**, 1976 **Treatise on Analytical Chemistry** Izaak Maurits Kolthoff, Philip Juliber Elving, 1993 **Alkene**

Polymerization Reactions with Transition Metal Catalysts Yury Kissin, 2008-03-10 During the past 30 years the field of alkene polymerization over transition metal catalysts underwent several major changes 1 The list of commercial heterogeneous Ziegler Natta catalysts for the synthesis of polyethylene and stereoregular polyolefins was completely renewed affording an unprecedented degree of control over the polymer structure 2 Research devoted to metallocene and other soluble transition metal catalysis has vastly expanded and has shifted toward complexes of transition metals with multidentate ligands 3 Recent developments in gel permeation chromatography temperature rising fractionation and crystallization fractionation provided the first reliable information about differences between various active centers in transition metal catalysts 4 A rapid development of high resolution ^{13}C NMR spectroscopy resulted in greatly expanded understanding of the chemical and steric features of polyolefins and alkene copolymers These developments require a new review of all aspects of alkene polymerization reactions with transition metal catalysts The first chapter in the book is an introductory text for researchers who are entering the field It describes the basic principles of polymerization reactions with transition metal catalysts the types of catalysts and commercially manufactured polyolefins The next chapter addresses the principal issue of alkene polymerization catalysis the existence of catalyst systems with single and multiple types of active centers The subsequent chapters are devoted to chemistry and stereochemistry of elemental reaction steps structures of catalyst precursors and reactions leading to the formation of active centers kinetics of polymerization reactions and their mechanisms The book describes the latest commercial polymerization catalysts for the synthesis of polyethylenes and polypropylene The book provides a detailed description of the multi center nature of commercial Ziegler Natta catalysts The book devotes specialized chapters to the most important aspects of transition metal polymerization catalysts the reactions leading to the formation of active centers the chemistry and stereochemistry of elemental polymerization steps reaction kinetics and the polymerization mechanism The book contains an introductory chapter for researchers who are entering the field of polymerization catalysis It describes the basic principles of polymerization reactions with transition metal catalysts and the types of commercially manufactured polyolefins and copolymers The book contains over 2000 references the most recent up to end of 2006
