examine how advances in technology are shaping children's reading skills and development. The chapters in this volume explore the influence of various aspects of digital texts, the child's cognitive and motivational skills, and the child's environment on reading development in digital contexts. Each chapter draws upon the expertise of scientists and researchers across countries and disciplines to review what is currently known about the influence of technology on reading, how it is studied, and to offer new insights and research directions based on recent work.

Measures of Self-concept Ruth C. Wylie, 1989-01-01. Ruth C. Wylie's two volumes of *The Self Concept* published by Nebraska in 1974 and 1979 evaluated psychological and sociological studies of self concept and self esteem. Looking at a plethora of tests, Wylie found in 1974 that very few had been adequately conceived or implemented. Many produced results that were unverifiable or specious. Her findings had disturbing implications not only for the tests themselves but for substantive research based upon them. In the 1980s, psychometric tests of self concept have continued to proliferate. Wylie has continued to assess them. *Measures of Self Concept* briefly summarizes the psychometric criteria for self concept tests as fully discussed in Wylie's 1974 book and the present general state of methodological adequacy of currently used earlier tests and some promising new ones still under development. Although Wylie still finds serious shortcomings, she notes a greater attempt today to increase and evaluate the validity of self concept indices. This book presents detailed up-to-date information about and psychometric evaluations of ten self concept tests that appear to be the most meritorious candidates for current use and for further research and development. It is the first book since her 1974 volume to review specific as well as general measures of self esteem for a range of ages from preschool to adult.

Psychological Perspectives on the Self, Volume 4 Jerry Suls, 2014-02-25. The primary aim of this volume is to present the most recent advances in the psychological study of the self with a special emphasis on the factors that contribute to self concept and self esteem. This volume offers the following features: state of the art testimonies of important new research programs on the self; valuable reviews and literature on measurement of self concept; analysis of sociocultural influences on self, an understudied topic until recently; new theory on the origins of self enhancement.

The Human Mind through the Lens of Language Nirmalangshu Mukherji, 2022-06-30. Most living forms in nature display various cognitive abilities in their behaviour. However, except for humans, no other animal builds fires and wheels, navigates with maps, and tells stories to other conspecifics. We can witness this unique feature of the human mind in almost everything humans do, such as painting, singing, and cooking. There is an underlying sense of unity in the generative part of these systems despite wide differences in what they are about. This book introduces, defends, and develops a novel philosophical approach to the study of the generative mind. Nirmalangshu Mukherji argues for a single species-specific generative principle that accounts for the human ability to combine symbolic forms without bound in each domain that falls under the generative mind.
