Fields of Wheat, Rolling on Forever Lisa Walsh, 2014-11-26 Family didn't seem to be important when I was a child It was something we took for granted When children played there would be two parents watching throwing a ball around and joking or sitting around the picnic table Well when I was a little child toddling around what I remember most is my time with my family in Florida my mom my dad my sister Chris and my brother Mike Family to me at that time meant having both parents around I believe one of our favorite places to go was Clearwater Florida My Aunt Fran and Uncle Al lived on an outlet of Clearwater Bay a few blocks

away from the Gulf of Mexico My dad would often take us fishing off my uncle s dock Uncle Al had a boat that we would ride around in as well and he would let us drive it but under adult supervision of course Mom and Aunt Fran would stay back and either clean the fish that we caught a dirty job nobody wanted or just watch us having fun Mom always liked being outdoors near the water Along with boating and fishing we loved looking at the barnacles that attached to the walls around the bay area and around the posts holding up the dock Mom seemed to be the one most fascinated with these small and disfigured little creatures She and the rest of us seemed to enjoy watching these creatures just to pass the time of day

Wind-tunnel Investigation of Effect of Sweep on Rolling Derivatives at Angles of Attack Up to 13° and at High Subsonic Mach Numbers, Including a Semiempirical Method of Estimating the Rolling Derivatives James W. Wiggins,1954 An investigation was performed in the Langley high speed 7 by 10 foot tunnel in order to determine the rolling derivatives for swept wing body configurations at angles of attack from 0 degrees to 13 degrees and at high subsonic Mach numbers The wings had sweep angles of 3 6 degrees 32 6 degrees 45 degrees and 60 degrees at the quarter chord line an aspect ratio of 4 a taper ratio of 0 6 and an NACA 65A006 airfoil section parallel to the free stream The results indicate a reduction in the damping in roll derivative at the higher test angles of attack Of the wings tested instability of the damping in

roll derivative was experienced over the largest ranges of angle of attack and Mach number for the 32 6 sweptback wing

Ed Horace Hayman Wilson,1832 **Studies of the Retardation Force Developed on an Aircraft Tire Rolling in Slush Or Water** Walter B. Horne,Upshur T. Joyner,Trafford J. W. Leland,1960 **Analysis of Effects of Interceptor Roll Performance and Maneuverability on Success of Collision-course Attack** William H. Phillips,1961 An attempt has been made to determine the importance of rolling performance and other factors in the design of an interceptor which uses collision course tactics A graphical method is presented for simple visualization of attack situations By means of diagrams showing vectoring limits that is the ranges of interceptor position and heading from which attacks may be successfully completed the relative importance of rolling performance and normal acceleration capability in determining the success of attacks is illustrated The results indicate that the reduction in success of attacks due to reduced rolling performance within the limits generally acceptable from the pilots standpoint is very small whereas the benefits due to substantially increasing the normal acceleration capability are large Additional brief analyses show that the optimum speed for initiating a head on attack is often that corresponding to the upper left hand corner of the V g diagram In these cases increasing speed beyond this point for given values of normal acceleration and radar range rapidly decreases the width of the region from which successful attacks can be initiated On the other hand if the radar range is increased with a variation somewhere between the first and second power of the interceptor speed the linear dimensions of the region from which successful attacks can be initiated vary as the square of the interceptor speed
