Gunter Lumer was an outstanding mathematician whose works have great influence on the research community in mathematical analysis and evolution equations. He was at the origin of the breath taking development the theory of semigroups saw after the pioneering book of Hille and Phillips from 1957. This volume contains invited contributions presenting the state of the art of these topics and reflecting the broad interests of Gunter Lumer. French Mathematical Seminars Nancy D. Anderson, 1989. Intended for mathematics librarians the list allows librarians to ascertain if a seminaire has been published which library has it and the forms of entry under which it has been cataloged.

These Proceedings form a record of the lectures presented at the international Conference on Functional Analysis and Approximation held at the Oberwolfach Mathematical Research Institute August 9-16 1980. They include 33 of the 38 invited conference papers as well as three papers subsequently submitted in writing. Further there is a report devoted to new and unsolved problems based on two special sessions of the conference. The present volume is the sixth Oberwolfach Conference in Birkhäuser's ISNM series to be edited at Aachen. It is once again devoted to more significant results obtained in the wide areas of approximation theory harmonic analysis functional analysis and operator theory during the past three years. Many of the papers solicited not only outline fundamental advances in their fields but also focus on interconnections between the various research areas. The papers in the present volume have been grouped into nine chapters. Chapter I on operator theory deals with maps on positive semidefinite operators spectral bounds of semigroup operators evolution equations of diffusion type the spectral theory of propagators and generalized inverses. Chapter II on functional analysis contains papers on modular approximation interpolation spaces and unconditional bases.
