Seminaire De Probabilities Xv:

Seminaire de Probabilites XXVI Jacques Azema, Paul A. Meyer, Marc Yor, 2006-11-15 All the papers contained in the volume are original fully refereed research papers. They represent a fairly broad spectrum of the research activity in probability theory which was done internationally in 1990-1991 with particular emphasis on Markov processes and stochastic calculus. The latter subject keeps growing and some important new developments included in the volume concern anticipative stochastic integrals and new applications of the enlargements of filtrations to the study of zeros of martingales.

FROM THE CONTENTS R Bass, D Khoshnevisan, Stochastic calculus and the continuity of local times of Levy processes; M T Barlow, P Imkeller, On some sample path properties of Skorokhod integral processes; T S Mountford, A critical function for the planar Brownian convex hull; L Dubins, M Smorodinsky, The modified discrete Levy transformation is Bernoulli; M Baxter, Markov processes on the boundary of the binary tree; R Abraham, Unarbre aleatoire infini associe a l'excursion brownienne; S E Kuznetsov, On the existence of a dual semigroup.

Seminaire de Probabilites XXXV J. Azema, M. Emery, M. Ledoux, M. Yor, 2004-10-21 Annotation Researchers and graduate students in the theory of stochastic processes will find in this 35th volume some thirty articles on martingale theory, martingales and finance, analytical inequalities and semigroups, stochastic differential equations, functionals of Brownian motion and of Levy processes. Ledoux's article contains a self-contained introduction to the use of semigroups in spectral gaps and logarithmic Sobolev inequalities; the contribution by Emery and Schachermayer includes an exposition for probabilists of Vershik's theory of backward discrete filtrations.

Séminaire de Probabilités XLIX Catherine Donati-Martin, Antoine Lejay, Alain Rouault, 2018-08-07 This 49th volume offers a good sample of the main streams of current research on probability and stochastic processes in particular those active in France. This includes articles on latest developments on diffusion processes, large deviations, martingale theory, quasi-stationary distribution, random matrices and many more. All the contributions come from spontaneous submissions and their diversity illustrates the good health of this branch of mathematics. The featured contributors are E Boissard, F Bouguet, J Brossard, M Capitaine, P Cattiaux, N Champagnat, K Abdoulaye Coulibaly, Pasquier, H Elad Altman, A Guillin, P Kratz, A Lejay, C Leuridan, P McGill, L Miclo, G Pagès, E Pardoux, P Petit, B Rajeev, L Serlet, H Tsukada, D Villeomannais and B Wilbertz.

Stochastic Analysis and Related Topics Hayri Korezlioglu, Ali S. Ustunel, 2006-11-14 The Silvri Workshop was divided into a short summer school and a working conference producing lectures and research papers on recent developments in stochastic analysis on Wiener space. The topics treated in the lectures relate to the Malliavin calculus, the Skorokhod integral and nonlinear functionals of white noise. Most of the research papers are applications of these subjects. This volume addresses researchers and graduate students in stochastic processes and theoretical physics.

Seminar on Stochastic Analysis, Random Fields and Applications Erwin Bolthausen, Marco Dozzi, Francesco Russo, 2012-12-06 Pure and applied stochastic analysis and random fields form the subject of this book. The collection of articles on these topics represent the state of the

art of the research in the field with particular attention being devoted to stochastic models in finance Some are review articles others are original papers taken together they will apprise the reader of much of the current activity in the area

Séminaire de Probabilités XLIV Catherine Donati-Martin,Antoine Lejay,Alain Rouault,2012-05-12 As usual some of the contributions to this 44th S minaire de Probabilit s were presented during the Journ es de Probabilit s held in Dijon in June 2010 The remainder were spontaneous submissions or were solicited by the editors The traditional and historical themes of the S minaire are covered such as stochastic calculus local times and excursions and martingales Some subjects already touched on in the previous volumes are still here free probability rough paths limit theorems for general processes here fractional Brownian motion and polymers and large deviations Lastly this volume explores new topics including variable length Markov chains and peacocks We hope that the whole volume is a good sample of the main streams of current research on probability and stochastic processes in particular those active in France

Séminaire de Probabilités XLIII Catherine Donati Martin,Antoine Lejay,Alain Rouault,2010-10-28 This is a new volume of the S minaire de Probabilit s which is now in its 43rd year Following the tradition this volume contains about 20 original research and survey articles on topics related to stochastic analysis It contains an advanced course of J Picard on the representation formulae for fractional Brownian motion The regular chapters cover a wide range of themes such as stochastic calculus and stochastic differential equations stochastic differential geometry filtrations analysis on Wiener space random matrices and free probability as well as mathematical finance Some of the contributions were presented at the Journ es de Probabilit s held in Poitiers in June 2009

Séminaire de Probabilités XLVIII Catherine Donati-Martin,Antoine Lejay,Alain Rouault,2016-11-17 In addition to its further exploration of the subject of peacocks introduced in recent S minaires de Probabilit s this volume continues the series focus on current research themes in traditional topics such as stochastic calculus filtrations and random matrices Also included are some particularly interesting articles involving harmonic measures random fields and loop soups The featured contributors are Mathias Beiglb ck Martin Huesmann and Florian Stebegg Nicolas Juillet Gilles Pags Dai Taguchi Alexis Devulder M ty s Barczy and Peter Kern I Bailleul J rgen Angst and Camille Tardif Nicolas Privault Anita Behme Alexander Lindner and Makoto Maejima C dric Lecouvey and Kilian Raschel Christophe Profeta and Thomas Simon O Khorunzhiy and Songzi Li Franck Maunoury St phane Laurent Anna Aksamit and Libo Li David Applebaum and Wendelin Werner

Probability Theory Subject Indexes from Mathematical Reviews American Mathematical Society,1987 **In Memoriam Paul-André Meyer - Séminaire de Probabilités XXXIX** Marc Yor,Michel Émery,2006-10-17 The 39th volume of S minaire de Probabilit s is a tribute to the memory of Paul Andr Meyer His life and achievements are recalled in this book and tributes are paid by his friends and colleagues This volume also contains mathematical contributions to classical and quantum stochastic calculus the theory of processes martingales and their applications to mathematical finance and Brownian motion These contributions provide an overview on the current trends of stochastic calculus **Séminaire de**

Probabilités XLV Catherine Donati-Martin, Antoine Lejay, Alain Rouault, 2013-07-19 The series of advanced courses initiated in Séminaire de Probabilités XXXIII continues with a course by Ivan Nourdin on Gaussian approximations using Malliavin calculus The Séminaire also occasionally publishes a series of contributions on a unifying subject in this spirit selected participants to the September 2011 Conference on Stochastic Filtrations held in Strasbourg and organized by Michel Emery have also contributed to the present volume The rest of the work covers a wide range of topics such as stochastic calculus and Markov processes random matrices and free probability and combinatorial optimization *Chaos Expansions, Multiple Wiener-Itô Integrals, and Their Applications* Christian Houdre, Victor Perez-Abreu, 1994-04-05 The study of chaos expansions and multiple Wiener Itô integrals has become a field of considerable interest in applied and theoretical areas of probability stochastic processes mathematical physics and statistics Divided into four parts this book features a wide selection of surveys and recent developments on these subjects Part 1 introduces the concepts techniques and applications of multiple Wiener Itô and related integrals The second part includes papers on chaos random variables appearing in many limiting theorems Part 3 is devoted to mixing zero one laws and path continuity properties of chaos processes The final part presents several applications to stochastic analysis *Séminaire de Probabilités XXXII* Jacques Azema, Michel Emery, Michel Ledoux, Marc Yor, 1998-05-20 All the papers in the volume are original research papers discussing fundamental properties of stochastic processes The topics under study martingales filtrations path properties etc represent an important part of the current research performed in 1996-97 by various groups of probabilists in France and abroad *Contiguity and the Statistical Invariance Principle* P. E. Greenwood, Al'bert Nikolaevich Shiryaev, 1985 **Probability and Analysis** Giorgio Letta, Maurizio Pratelli, 2006-11-14 Lectures Given at the 1st 1985 Session of the Centro Internazionale Matematico Estivo CIME **Random Times and Enlargements of Filtrations in a Brownian Setting** Roger Mansuy, Marc Yor, 2006-07-25 In November 2004 M Yor and R Mansuy jointly gave six lectures at Columbia University New York These notes follow the contents of that course covering expansion of filtration formulae BDG inequalities up to any random time martingales that vanish on the zero set of Brownian motion the Azéma Emery martingales and chaos representation the filtration of truncated Brownian motion attempts to characterize the Brownian filtration The book accordingly sets out to acquaint its readers with the theory and main examples of enlargements of filtrations of either the initial or the progressive kind It is accessible to researchers and graduate students working in stochastic calculus and excursion theory and more broadly to mathematicians acquainted with the basics of Brownian motion *Stochastic Integration and Differential Equations* Philip Protter, 2013-12-21 It has been 15 years since the first edition of Stochastic Integration and Differential Equations A New Approach appeared and in those years many other texts on the same subject have been published often with connections to applications especially mathematical finance Yet in spite of the apparent simplicity of approach none of these books has used the functional analytic method of presenting semimartingales and stochastic integration Thus a 2nd edition seems

worthwhile and timely though it is no longer appropriate to call it a new approach The new edition has several significant changes most prominently the addition of exercises for solution These are intended to supplement the text but lemmas needed in a proof are never relegated to the exercises Many of the exercises have been tested by graduate students at Purdue and Cornell Universities Chapter 3 has been completely redone with a new more intuitive and simultaneously elementary proof of the fundamental Doob Meyer decomposition theorem the more general version of the Girsanov theorem due to Lenglart the Kazamaki Novikov criteria for exponential local martingales to be martingales and a modern treatment of compensators Chapter 4 treats sigma martingales important in finance theory and gives a more comprehensive treatment of martingale representation including both the Jacod Yor theory and Emery's examples of martingales that actually have martingale representation thus going beyond the standard cases of Brownian motion and the compensated Poisson process New topics added include an introduction to the theory of the expansion of filtrations a treatment of the Fefferman martingale inequality and that the dual space of the martingale space H^1 can be identified with BMO martingales Solutions to selected exercises are available at the web site of the author with current URL <http://www.orie.cornell.edu/protter/books.html> **Probability** Joseph L. Doob, 1977 Billingsley Dimension in Probability Spaces H. Cajar, 2006-11-14

Séminaire de Probabilités XLI Catherine Donati-Martin, Michel Émery, Alain Rouault, Christophe Stricker, 2008-05-07 Stochastic processes are as usual the main subject of the Séminaire with contributions on Brownian motion fractional or other Lévy processes martingales and probabilistic finance Other probabilistic themes are also present large random matrices statistical mechanics The contributions in this volume provide a sampling of recent results on these topics All contributions with the exception of two are written in English language
