**Technologies** Hessam S. Sarjoughian,Francois E. Cellier,2013-03-09 The initial ideas behind this edited volume started in spring of 1998 some two years before the sixtieth birthday of Bernard P Zeigler The idea was to bring together distinguished researchers colleagues and former students of Professor Zeigler to present their latest findings at the AIS 2000 conference During the spring of 1999 the initial ideas evolved into creating a volume of articles surrounding seminal concepts pertaining to modeling and simulation as proposed developed and advocated by Professor Zeigler throughout his scientific career Also included would be articles describing progress covering related aspects of software engineering and artificial intelligence As this volume is emphasizing concepts and ideas spawned by the work of Bernard P Zeigler it is most appropriate to offer a biographical sketch of his scientific life thus putting into a historical perspective the contributions presented in this volume as well as new research directions that may lie ahead Bernard P Zeigler was born March 5 1940 in Montreal Quebec Canada where he obtained his bachelor s degree in engineering physics in 1962 from McGill University Two years later having completed his MS degree in electrical engineering at the Massachusetts Institute of Technology he spent a year at the National Research Council in Ottawa Returning to academia he became a Ph D student in computer and communication sciences at the University of Michigan Ann Arbor

Semiotics and Intelligent Systems Development Gudwin,

Ricardo,Queiroz, Jo?o,2006-10-31 This book assembles semiotics and artificial intelligence techniques in order to design new kinds of intelligence systems it changes the research field of artificial intelligence by incorporating the study of meaning processes semiosis from the perspective of formal sciences linguistics and philosophy Provided by publisher

**Semiotics in Language Education** Marcel Danesi,2012-10-25 Semiotics has had a profound impact on our comprehension of a wide range of phenomena from how animals signify and communicate to how people read TV commercials This series features books on semiotic theory and applications of that theory to understanding media language and related subjects The series publishes scholarly monographs of wide appeal to students and interested non specialists as well as scholars AAS is a peer reviewed series of international scope

**Adaptivity and Learning** Reimer Kühn,Randolf Menzel,Wolfram Menzel,Ulrich Ratsch,Michael M. Richter,Ion-Olimpiu Stamatescu,2013-06-29 Adaptivity and learning have in recent decades become a common concern of scientific disciplines These issues have arisen in mathematics physics biology informatics economics and other fields more or less simultaneously The aim of this publication is the interdisciplinary discourse on the phenomenon of learning and adaptivity Different perspectives are presented and compared to find fruitful concepts for the disciplines involved The authors select problems showing representative traits concerning the frame up the methods and the achievements rather than to present extended overviews

**Linguistic Geometry** Boris Stilman,2012-12-06 Linguistic Geometry From Search to Construction is the first book of its kind Linguistic Geometry LG is an approach to the construction

of mathematical models for large scale multi agent systems A number of such systems including air space combat robotic manufacturing software re engineering and Internet cyberwar can be modeled as abstract board games These are games with moves that can be represented by the movement of abstract pieces over locations on an abstract board The purpose of LG is to provide strategies to guide the games participants to their goals Traditionally discovering such strategies required searches in giant game trees These searches are often beyond the capacity of modern and even conceivable future computers LG dramatically reduces the size of the search trees making the problems computationally tractable LG provides a formalization and abstraction of search heuristics used by advanced experts including chess grandmasters Essentially these heuristics replace search with the construction of strategies To formalize the heuristics LG employs the theory of formal languages i e formal linguistics as well as certain geometric structures over an abstract board The new formal strategies solve problems from different domains far beyond the areas envisioned by the experts For a number of these domains Linguistic Geometry yields optimal solutions

**Handbook of Simulation** Jerry Banks, 1998-09-14 The only complete guide to all aspects and uses of simulation from the international leaders in the field There has never been a single definitive source of key information on all facets of discrete event simulation and its applications to major industries The Handbook of Simulation brings together the contributions of leading academics practitioners and software developers to offer authoritative coverage of the principles techniques and uses of discrete event simulation Comprehensive in scope and thorough in approach the Handbook is the one reference on discrete event simulation that every industrial engineer management scientist computer scientist operations manager or operations researcher involved in problem solving should own with an in depth examination of Simulation methodology from experimental design to data analysis and more Recent advances such as object oriented simulation on line simulation and parallel and distributed simulation Applications across a full range of manufacturing and service industries Guidelines for successful simulations and sound simulation project management Simulation software and simulation industry vendors

*Information, Organisation and Technology* Kecheng Liu, Rodney J. Clarke, Peter Bøgh Andersen, Ronald K. Stamper, 2012-12-06 Organisational semiotics is a discipline that is concerned with the interrelationships between individuals and groups and between humans and technology functioning in organisations and society Organisational semiotics opens up the prospect of theory building and the development of new methods and techniques to gain insights into organised behaviour and enacted social practices in the presence and absence of various technologies It shares common interests with many other approaches to information and organisations such as computer science computational semiotics organisational engineering and language action perspective The common vision shared by these approaches is to treat organisations and related information systems and technologies within a unified semiotic framework with particular reference to the huge range of issues that elude many traditional disciplines The analysis and design of information systems develops methods for

solving the practical problems but offers no rigorous theoretical foundation for them or how information functions within and between organisations The semiotic perspective accommodates the individual and the social the human and the technical intra and inter organisational interactions at a level of detail that is required in the study modelling design and engineering of new and alternative organisational and technical systems This perspective is outlined in the chapter presentations of Information Organisation and Technology

**An Ontological and Epistemological Perspective of Fuzzy Set Theory I.** Burhan Türksen, 2005-11-15 Fuzzy set and logic theory suggest that all natural language linguistic expressions are imprecise and must be assessed as a matter of degree But in general membership degree is an imprecise notion which requires that Type 2 membership degrees be considered in most applications related to human decision making schemas Even if the membership functions are restricted to be Type 1 their combinations generate an interval valued Type 2 membership This is part of the general result that Classical equivalences breakdown in Fuzzy theory Thus all classical formulas must be reassessed with an upper and lower expression that are generated by the breakdown of classical formulas Key features Ontological grounding Epistemological justification Measurement of Membership Breakdown of equivalences FDCF is not equivalent to FCCF Fuzzy Beliefs Meta Linguistic axioms Ontological grounding Epistemological justification Measurement of Membership Breakdown of equivalences FDCF is not equivalent to FCCF Fuzzy Beliefs Meta Linguistic axioms

*Imagination in Educational Theory and Practice* Robert Fitzgerald, Thomas William Nielsen, 2010-04-16 Inspired by papers developed for the 6th International Conference on Imagination and Education Imaginative Practice Imaginative Inquiry Canberra Australia 2008 this book connects a cross section of educators researchers and administrators in a dialogue and exploration of imaginative and creative ways of teaching learning and conducting educational inquiry Imagination is a concept that spans traditional disciplinary and professional boundaries The authors in this book acknowledge diverse theoretical and practical allegiances but they concur that imagination will play an essential role in the building of new foundations for education in the 21st century From our conception of human development through our ways of educating teachers to the teaching of mathematics they argue for the centrality of imagination in the realization of human potential and for its relevance to the most urgent problems confronting our world Introduced by a wide ranging literature review and extensively referenced this volume makes an important contribution to a rapidly expanding field

**Methods and Applications of Intelligent Control** S.G. Tzafestas, 2012-12-06 This book is concerned with Intelligent Control methods and applications The field of intelligent control has been expanded very much during the recent years and a solid body of theoretical and practical results are now available These results have been obtained through the synergetic fusion of concepts and techniques from a variety of fields such as automatic control systems science computer science neurophysiology and operational research Intelligent control systems have to perform anthropomorphic tasks fully autonomously or interactively with the human under known or unknown and uncertain environmental conditions Therefore

the basic components of any intelligent control system include cognition perception learning sensing planning numeric and symbolic processing fault detection repair reaction and control action These components must be linked in a systematic synergetic and efficient way Predecessors of intelligent control are adaptive control self organizing control and learning control which are well documented in the literature Typical application examples of intelligent controls are intelligent robotic systems intelligent manufacturing systems intelligent medical systems and intelligent space teleoperators Intelligent controllers must employ both quantitative and qualitative information and must be able to cope with severe temporal and spatial variations in addition to the fundamental task of achieving the desired transient and steady state performance Of course the level of intelligence required in each particular application is a matter of discussion between the designers and users The current literature on intelligent control is increasing but the information is still available in a sparse and disorganized way

*Computing with Words in Information/Intelligent Systems 1* Lotfi A. Zadeh, 2013-03-09 These two volumes consisting of Foundations and Applications provide the current status of theoretical and empirical developments in computing with words In philosophy the twentieth century is said to be the century of language This is mainly due to Wittgenstein who said The meaning of a word is its use in the language game The concept game is a concept with blurred edges In the first phrase the language game implies the everyday human activity with language and in the latter game simply implies an ordinary word Thus Wittgenstein precisely stated that a word is fuzzy in real life Unfortunately this idea about a word was not accepted in the conventional science We had to wait for Zadeh's fuzzy sets theory Remembering Wittgenstein's statement we should consider on the one hand the concept of computing with words from a philosophical point of view It deeply relates to the everyday use of a word in which the meaning of a word is fuzzy in its nature

**Planning in Intelligent Systems** Wout van Wezel, R. J. Jorna, Alexander M. Meystel, 2006-03-03 The first comparative examination of planning paradigms This text begins with the principle that the ability to anticipate and plan is an essential feature of intelligent systems whether human or machine It further assumes that better planning results in greater achievements With these principles as a foundation Planning in Intelligent Systems provides readers with the tools needed to better understand the process of planning and to become better planners themselves The text is divided into two parts Part One Theoretical discusses the predominant schools of thought in planning psychology and cognitive science organizational science computer science mathematics artificial intelligence and systems theory In particular the book examines commonalities and differences among the goals methods and techniques of these various approaches to planning The result is a better understanding of the process of planning through the cross fertilization of ideas Each chapter contains a short introduction that sets forth the interrelationships of that chapter to the main ideas featured in the other chapters Part Two Practical features six chapters that center on a case study of The Netherlands Railways Readers learn to apply theory to a real world situation and discover how expanding their repertoire of planning methods can help solve seemingly intractable problems All chapters have

been contributed by leading experts in the various schools of planning and carefully edited to ensure a consistent high standard throughout. This book is designed to not only expand the range of planning tools used but also to enable readers to use them more effectively. It challenges readers to look at new approaches and learn from new schools of thought. Planning in Intelligent Systems delivers effective planning approaches for researchers, professors, students, and practitioners in artificial intelligence, computer science, cognitive psychology, and mathematics, as well as industry planners and managers.

**Human Cognition and Social Agent Technology** Kerstin Dautenhahn, 2000-03-15 Human Cognition and Social Agent Technology is written for readers who are curious about what human social cognition is and whether and how advanced software programs or robots can become social agents. Topics addressed in 16 peer-reviewed chapters by researchers at the forefront of agent research include Narrative intelligence and implementations of story telling systems, socially situated avatars, and conscious software agents, cognitive architectures for socially intelligent agents, agents with emotions, design issues for interactive systems, artificial life, agents' contributions to agent design from artistic practice, and a Cognitive Technology view on living with socially intelligent agents. The book addresses both software and robotic agents. On the one hand, justice is done to the scientific and technical aspects, and on the other hand, the reader will learn about pioneering technological developments which are necessary for a public discourse and critical evaluation on where social agent technology is leading us and how such a development can be shaped in order to meet the social, cultural, and cognitive needs of humans. The book is suitable for students, researchers, and everyone interested in this emerging and quickly growing field; it does not require any specialist background knowledge.

**Series B Self-Adaptive Software** Robert Laddaga, Paul Robertson, Howie Shrobe, 2003-08-03 The 18 revised full papers presented in this book together with an introductory survey were carefully reviewed and constitute the documentation of the Second International Workshop on Self-adaptive Software IWSAS 2001 held in Balatonfured, Hungary, in May 2001. Self-adaptive software evaluates its own behavior and changes it when the evaluation indicates that the software does not accomplish what it is intended to do or when better functionality or better performance is possible. The self-adaptive approach in software engineering builds on well-known dynamic features familiar to Lisp or Java programmes and aims at improving the robustness of software systems by gradually adding new features of self-adaptation or autonomy.

**Organic Computing** Rolf P. Würtz, 2008-10-21 In this book the major ideas behind Organic Computing are delineated together with a sparse sample of computational projects undertaken in this new field. Biological metaphors include evolution, neural networks, gene regulatory networks, networks of brain modules, hormone system, insect swarms, and ant colonies. Applications are as diverse as system design, optimization, artificial growth, task allocation, clustering, routing, face recognition, and sign language understanding.
