The Quest, 2004 Traditional Islamic Environmentalism Tarik M. Quadir, 2013-09-16 This work examines the relevance of traditional Islamic thought and practices for a lasting solution to the current environmental crisis Quadir describes how Seyyed Hossein Nasr challenges Muslims to reclaim their traditional intellectual and Sufi heritage as powerful means toward a most thoughtful approach to the crisis In so doing Nasr urges us to take a critical look at the consequences of the worldviews generated by modern science and technology and offers bold solutions for a more caring relationship between

human problems are explored and discussed in relation to the brilliant but haunted biography of the 19th century philosopher Friedrich Nietzsche The problem of good and evil the search for personal truth the questions of nihilism and life's meaning and the dangers of self inflation in the wake of religious experience are each considered in this in depth psychological analysis The author sheds new light on Nietzsche's extraordinary life and work illuminating many aspects of his personal spiritual struggle while providing insights into some of the most basic and problematic questions that confront us all

Man and the Universe Oliver Lodge,2016-02-12 Originally published in 1908 Lodge applies his background in physics to the study of Christian Theology He aims to reconcile religious doctrine to scientific theory calling for a re interpretation of biblical texts to allow for the integration of science while simultaneously making a case for the acceptance of miracles in the scientific community This title will be of interest to students of Religious Studies as well as to general readers interested in problems of existence **Man and the Universe** Sir Oliver Lodge,1917 **Religion Index One** ,2007 Science of the Cosmos, Science of the Soul William C. Chittick,2013-10-01 With academic courses either encouraging commercialism or cultivating zealots Chittick states that it is impossible to understand classical Islamic texts without the years of contemplative study that are anathema to the modern education system Insisting upon a return to the ways of the ancient wisdom tradition which saw the quest for knowledge of the soul the world and God as a unifying spiritual discipline Chittick maintains that the study of Islamic texts cannot be treated separately from self understanding Fascinating radical and a true challenge to modern trends in academic study this book opens a new debate in Islamic thought *The Non-Local Universe* Robert Nadeau,Menas Kafatos,2001-05-31 Classical physics states that physical reality is local a point in space cannot influence another point beyond a relatively short distance However In 1997 experiments were conducted in which light particles photons originated under certain conditions and traveled in opposite directions to detectors located about seven miles apart The amazing results indicated that the photons interacted or communicated with one another instantly or in no time Since a distance of seven miles is quite vast in quantum physics this led physicists to an extraordinary conclusion even if experiments could somehow be conducted in which the distance between the detectors was half way across the known universe the results would indicate that interaction or communication between the photons would be instantaneous What was revealed in these little known experiments in 1997 is that physical reality is non local a discovery that Robert Nadeau and Menas Kafatos view as the most momentous in the history of science In *The Non Local Universe* Nadeau and Kafatos offer a revolutionary look at the breathtaking implications of non locality They argue that since every particle in the universe has been entangled with other particles like the two photons in the 1997 experiments physical reality on the most basic level is an undivided wholeness In addition to demonstrating that physical processes are vastly interdependent and interactive they also show that more complex systems in both physics and biology display emergent properties and or behaviors that cannot be explained in the terms of the sum of parts One of the most startling implications of non locality in human terms claim the authors is that

there is no longer any basis for believing in the stark division between mind and world that has preoccupied much of western thought since the seventeenth century And they also make a convincing case that human consciousness can now be viewed as emergent from and seamlessly connected with the entire cosmos In pursuing this groundbreaking argument the authors not only provide a fascinating history of developments that led to the discovery of non locality and the sometimes heated debate between the great scientists responsible for these discoveries They also argue that advances in scientific knowledge have further eroded the boundaries between physics and biology and that recent studies on the evolution of the human brain suggest that the logical foundations of mathematics and ordinary language are much more similar than we previously imagined What this new knowledge reveals the authors conclude is that the connection between mind and nature is far more intimate than we previously dared to imagine What they offer is a revolutionary look at the implications of non locality implications that reach deep into that most intimate aspect of humanity consciousness
