Opportunities in Biotechnology for Future Army Applications National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Opportunities in Biotechnology for Future Army Applications, 2001-06-11 This report surveys opportunities for future Army applications in biotechnology including sensors electronics and computers materials logistics and medical therapeutics by matching commercial trends and developments with enduring Army requirements Several biotechnology areas are identified as important for the Army to exploit either by direct funding of research or by indirect influence of commercial sources to achieve significant gains in combat effectiveness before 2025 *Laser Radar* National Research Council, Division on Engineering and Physical Sciences, Committee on Review of Advancements in Active Electro-Optical Systems to Avoid Technological Surprise Adverse to U.S. National Security, 2014-03-14 In today's world the range of technologies with the potential to threaten the security of U S military forces is extremely broad These include developments in explosive materials sensors control systems robotics satellite systems and computing power to name just a few Such technologies have not only enhanced the capabilities of U S military forces but also offer enhanced offensive capabilities to potential adversaries either directly through the development of more

sophisticated weapons or more indirectly through opportunities for interrupting the function of defensive U S military systems Passive and active electro optical EO sensing technologies are prime examples Laser Radar considers the potential of active EO technologies to create surprise i e systems that use a source of visible or infrared light to interrogate a target in combination with sensitive detectors and processors to analyze the returned light The addition of an interrogating light source to the system adds rich new phenomenologies that enable new capabilities to be explored This report evaluates the fundamental physical limits to active EO sensor technologies with potential military utility identifies key technologies that may help overcome the impediments within a 5 10 year timeframe considers the pros and cons of implementing each existing or emerging technology and evaluates the potential uses of active EO sensing technologies including 3D mapping and multi discriminate laser radar technologies

Multisensor Fusion Anthony K. Hyder,E. Shahbazian,E. Waltz,2012-12-06 For some time all branches of the military have used a wide range of sensors to provide data for many purposes including surveillance reconnoitring target detection and battle damage assessment Many nations have also attempted to utilise these sensors for civilian applications such as crop monitoring agricultural disease tracking environmental diagnostics cartography ocean temperature profiling urban planning and the characterisation of the Ozone Hole above Antarctica The recent convergence of several important technologies has made possible new advanced high performance sensor based applications relying on the near simultaneous fusion of data from an ensemble of different types of sensors The book examines the underlying principles of sensor operation and data fusion the techniques and technologies that enable the process including the operation of fusion engines Fundamental theory and the enabling technologies of data fusion are presented in a systematic and accessible manner Applications are discussed in the areas of medicine meteorology BDA and targeting transportation cartography the environment agriculture and manufacturing and process control
