Hereditary Hearing Loss and Its Syndromes Robert J. Gorlin, Helga V. Toriello, 1995 This definitive reference work replaces Konigsmark and Gorlin's Genetic and Metabolic Deafness 1976 Whereas the earlier volume covered 151 genetic conditions related to hearing loss this work covers 435 As before the authors first discuss isolated hereditary hearing loss and then present hearing loss syndromes such as those involving the nervous system eye external ear and musculoskeletal system The discussions are authoritative practical and well illustrated and those of the most important syndromes are very detailed Introductory chapters deal with the history of the field clinical approach embryology of the ear tooth anomalies and hearing loss and related endocrine and metabolic disorders Throughout the authors pay careful attention to nomenclature and classification This will be an invaluable resource for all professionals concerned with genetic hearing loss including medical geneticists audiologists and otolaryngologists *Adult Aural Rehabilitation* Denzil N. Brooks, 2013-11-09 Man's need for communication with his fellow man is possibly his greatest need and the fulfilment of his other needs and desires is largely dependent upon or at the last greatly facilitated by his ability to satisfy this basic one Louise Tracy Defective hearing disrupts human communication It gives rise to anxiety frustration stress isolation loss of self esteem even loss of livelihood for the individual with a reduced capacity to receive and interpret sound Because we live in families and communities the effects of hearing loss are not restricted to the impaired individual Those who associate with that person especially those who are very close are affected and prone to many of the same emotions and stresses From the earliest times man has sought for remedies for hearing loss Incantations infusions cuppings and bleedings all have been advocated and with the rare serendipitous exception have been equally ineffective The only real assistance for countless generations was to cup the hand behind the ear and ask the speaker to raise their voice Hearing Science and Hearing Disorders M.E. Lutman, 2014-06-28 *Hearing Science and Hearing Disorders* focuses on the nature of the processes in the inner ear and the nervous system that mediate hearing Organized into eight chapters this book first discusses the nature of speech communication the extent of hearing problems and the pathophysiology of hearing Four core chapters follow in which four areas of central importance to

understanding hearing disorders and their effects are covered These areas are assessment of auditory function the scope for technological solutions the nature of audio visual speech perception and the effects of deafness upon speech production This book will be valuable to students to academic and professional workers concerned with hearing speech and their disorders and to scientifically or medically literate people in general
