

# The 8 Sensory Systems

## Auditory

What you hear, space-time relationships, influences regulation, spatial awareness, muscle tone and balance

## Visual (sight)

What you can see, visual cortex at back of skull; connected to vestibular and proprioceptive systems

## Olfactory (smell)

What you can smell, olfactory bulb directly connected to the limbic system

## Gustatory (taste)

Taste and motor processes for eating, breathing etc.  
Sensations: chewy, crunchy, salty, sour, sweet, spicy, hot and cold

## Tactile (touch)

Touch receptors send feedback about pain, vibration and temperature, deep pressure and light touch have different receptors

## Vestibular

Any time you move you are getting vestibular input, the vestibular system in the inner ear detects gravity, motion, movement and space-time relationship, important for balance.

## Proprioception

Sense of your body in space, body boundaries and what is self; works with vestibular and tactile to create a foundation for efficient movement, body map and orientation

## Interoception

An awareness of your internal states (hunger, thirst, emotion, temperature etc.) and systems (heart, kidneys, bladder, skin, hormones, lungs, stomach, intestines)

## **Sensory Processes:**

**Sensory Processes** Lawrence Marks, 2014-07-23 *Sensory Processes* The New Psychophysics describes summarizes and theorizes on the application of psychophysics to the study of sensory processes This book deals with significant issues in sensory psychology which is mainly by treating sensory dimensions and attributes as measurable quantities Organized into seven chapters this book starts with an overview of the fundamental methods for evaluating the magnitudes of sensation with emphasis direct scaling methods This text then explains the advantages of direct scaling procedures in providing psychophysical and sensory physical information Other chapters consider the parameters of temporal and spatial distribution of the stimulus This book discusses as well the other significant variables that determine sensitivity particularly compositional variables that refer to wavelength and frequency of light and sound The final chapter deals with several persistent issues and unresolved questions in the realm of sensory scaling Sensory psychologists sensory scientists researchers and graduate students will find this book useful

**The Handbook of Multisensory Processes** Gemma Calvert, Charles Spence, Barry E. Stein, 2004 Research is suggesting that rather than our senses being independent perception is fundamentally a multisensory experience This handbook reviews the evidence and explores the theory of broad underlying principles that govern sensory interactions regardless of the specific senses involved

*Sensory Processing in Aquatic Environments* Shaun P. Collin, N. Justin Marshall, 2008-04-08 Research on sensory processing or the way animals see hear smell taste feel and electrically and magnetically sense their environment has advanced a great deal over the last fifteen years This book discusses the most important themes that have emerged from recent research and provides a summary of likely future directions The book starts with two sections on the detection of sensory signals over long and short ranges by aquatic animals covering the topics of navigation communication and finding food and other localized sources The next section the co evolution of signal and sense deals with how animals decide whether the source is prey predator or mate by utilizing receptors that have evolved to take full advantage of the acoustical properties of the signal Organisms living in the deep sea environment have also received a lot of recent attention so the next section deals with visual adaptations to limited light environments where sunlight is replaced by bioluminescence and the visual system has undergone changes to optimize light capture and sensitivity The last section on central co ordination of sensory systems covers how signals are processed and filtered for use by the animal This book will be essential reading for all researchers and graduate students interested in sensory systems
