SenGupta,2001-09-26 This new book explains advanced and emerging technologies for removing heavy metals from wastestreams and contaminated sites Separation processes of this type are critical for meeting stringent regulations of priority pollutants especially arsenic mercury and lead which the text treats in depth After explaining the chemistry of heavy metals a **Mineral-Water Interface Geochemistry** Michael F. Hochella,Art F. White,2018-12-17 Volume 23 of Reviews in Mineralogy and accompanying MSA short course covers chemical reactions that take place at mineral water interfaces We believe that this book describes most of the important concepts and contributions that have driven mineral water interface geochemistry to its present state We begin in Chapter 1 with examples of the global importance of mineral water interface reactions and a brief review of the contents of the entire book Thereafter we have divided the book into four sections including atomistic approaches Chapters 2 3 adsorption Chapters 4 8 precipitation and dissolution Chapters 9 11 and oxidation reduction reactions Chapters 11 14 **Proceedings of the 50th Industrial Waste Conference May 8, 9, 10, 1995** Purdue Research Foun,1997-05-01 Proceedings of the 50th Industrial Waste Conference is the only comprehensive documentation of the entire seminar It is an overview of the current state of hazardous waste identification management and disposal **Contamination of Water** Arif Ahamad,Sharf Elahi Siddiqui,Pardeep Singh,2021-08-06 Water containing significant amounts of inorganic and organic contaminants can have serious environmental consequences and serious health implications when ingested Contamination of Water Health Risk Assessment and Treatment Strategies takes an interconnected look at the various pollutants the source of contamination the effects of contamination on aquatic ecosystems and human health and what the potential mitigation strategies are This book is organized into three sections The first section examines the sources of potential contamination This includes considering the current scenario of heavy metal and pesticide contamination in water as well as the regions impacted due to industrialization mining or urbanization The second section goes on to discuss water contamination and health risks caused by toxic elements radiological contaminants microplastics and nanoparticles and pharmaceutical and personal care products This book concludes with a section exploring efficient low cost treatment technologies and remediation strategies that remove toxic pollutants from water Contamination of Water incorporates both theoretical and practical information that will be useful for researchers professors graduate students and professionals working on water contamination environmental and health impacts and the management and treatment of water resources Provides practical case studies of various types and sources of contamination Discusses inorganic and organic contaminants and their impact on human health Evaluates effective water treatment and remediation technologies to remove toxins from water and minimize risk *Chemical Treatment* William C. Anderson,2013-06-29 This monograph on chemical treatment is one of a series of eight on innovative site and waste

remediation technologies that are the culmination of a multi organization effort involving more than 100 experts over a two year period It provides the experienced practicing professional guidance on the application of innovative processes considered ready for full scale application Other monographs in this series address bioremediation soil washing soil flushing solvent chemical extraction stabilization solidification thermal desorption thermal destruction and vacuum vapor extraction

7.7 Chemical Treatment The term chemical treatment as used in this monograph refers to the use of reagents to destroy or chemically modify target contaminants by means other than pyrolysis or combustion The monograph addresses processes that chemically treat contaminated soils groundwaters surface waters and to a limited extent concentrated contaminants Chemical treatment is a means of converting hazardous constituents into less environmentally objectionable forms in order to meet treatment objectives This monograph addresses substitution oxidation and chemical precipitation processes It addresses processes within these classes that are sufficiently advanced for full scale application There are a number of emerging technologies within these classes that are in the research or an early development stage not yet ready for full scale application that appear to be very promising technologically Six such technologies are briefly addressed in Appendix A

Microbial Approach of Biofiltration in Industrial Wastewater Treatment for the Sustainability of Environment Maulin P. Shah,2025-02-04 The ever increasing number of pollutants released into the environment drives the search for new treatment technologies or the modification of existing ones In this sense innovation in biofiltration systems seems promising and therefore a book on the current developments and innovations on its subject is very appropriate Biofiltration is a relatively emerging new technology applied to the treatment of wastewater and other toxic substances Over the past two decades this technology has become an economically viable process for treating the wide variety of unruly pollutants released into the environment For example it is speculated that the US biofiltration market will reach more than 100 million by 2020 This book aims to show how innovation in biofiltration can provide effective solutions to overcome the serious problem of water pollution worldwide The removal of contaminants will result from the combined effects of biological oxidation adsorption and filtration processes Many physicochemical and operational factors influence the performance treatment costs and long term stability of biofilters for wastewater treatment This book focuses on identifying factors that affect biofiltration explains their influence and provides guidelines on how to control these factors to optimize better control over the control of pollutants present in wastewater treatment plants The fundamental basis of treatment in biofilters is the action of microorganisms that degrade pollutants and consequently the book also discusses in depth the microbial ecology of biofiltration
