Separation Techniques for Nuclear Fuel Reprocessing and Radioactive Waste Treatment Kenneth L Nash, Gregg J Lumetta, 2011-03-15 Advanced separations technology is key to closing the nuclear fuel cycle and relieving future generations from the burden of radioactive waste produced by the nuclear power industry Nuclear fuel reprocessing techniques not only allow for recycling of useful fuel components for further power generation but by also separating out the actinides lanthanides and other fission products produced by the nuclear reaction the residual radioactive waste can be minimised Indeed the future of the industry relies on the advancement of separation and transmutation technology to ensure environmental protection criticality safety and non proliferation i e security of radioactive materials by reducing their long term radiological hazard Advanced separation techniques for nuclear fuel reprocessing and radioactive waste treatment provides a comprehensive and timely reference on nuclear fuel reprocessing and radioactive waste treatment Part one covers

the fundamental chemistry engineering and safety of radioactive materials separations processes in the nuclear fuel cycle including coverage of advanced aqueous separations engineering as well as on line monitoring for process control and safeguards technology Part two critically reviews the development and application of separation and extraction processes for nuclear fuel reprocessing and radioactive waste treatment The section includes discussions of advanced PUREX processes the UREX concept fission product separations and combined systems for simultaneous radionuclide extraction Part three details emerging and innovative treatment techniques initially reviewing pyrochemical processes and engineering highly selective compounds for solvent extraction and developments in partitioning and transmutation processes that aim to close the nuclear fuel cycle The book concludes with other advanced techniques such as solid phase extraction supercritical fluid and ionic liquid extraction and biological treatment processes With its distinguished international team of contributors Advanced separation techniques for nuclear fuel reprocessing and radioactive waste treatment is a standard reference for all nuclear waste management and nuclear safety professionals radiochemists academics and researchers in this field A comprehensive and timely reference on nuclear fuel reprocessing and radioactive waste treatment Details emerging and innovative treatment techniques reviewing pyrochemical processes and engineering as well as highly selective compounds for solvent extraction Discusses the development and application of separation and extraction processes for nuclear fuel reprocessing and radioactive waste treatment Chemical Separation Technologies and Related Methods of Nuclear Waste Management Gregory R. Choppin, Mikhail Kh. Khankhasayev, 1999-02-28 Separation technologies are of crucial importance to the goal of significantly reducing the volume of high level nuclear waste thereby reducing the long term health risks to mankind International co operation including the sharing of concepts and methods as well as technology transfer is essential in accelerating research and development in the field The writers of this book are all internationally recognised experts in the field of separation technology well qualified to assess and criticize the current state of separation research as well as to identify future opportunities for the application of separation technologies to the solution of nuclear waste management problems The major emphases in the book are research opportunities in the utilization of innovative and potentially more efficient and cost effective processes for waste processing treatment actinide speciation separation methods technological processing and environmental restoration *Chemical Separations in Nuclear Waste Management* Gregory R. Turning a Problem into a Resource: Remediation and Waste Management at the Sillamäe Site, Estonia Cheryl K. Rofer, Tõnis Kaasik, 2012-12-06 In its present condition the dam of the tailings pond is less stable than is recommended by international practice A surveillance system has been established to observe both vertical and horizontal soil movement and the buildup of stresses in the soil The stability of the dam depends primarily on erosion by shore processes and the consequent reduction of the counterbalance as well as the reduction in strength of the Cambrian clay underlying the dam caused by creep and by water percolating to the bottom of the pond The most critical need is to enlarge the counterbalance and to stop erosion The surveillance system should be supplemented with a system of inclinometers Monitoring of coastal processes should be continued At present the hydrodynamic stress on the dam is minimal because the pebble layer allows drainage of water out of the tailings pond and into the sea The regulatory requirement to end emissions into the Baltic Sea must be met without causing undesirable hydrodynamic stresses on the dam This could be done by covering the pond and diverting precipitation water 9 References I Report on Topographic Geodetic Studies at the Tailings Pond 1965 No A 4 01187 in Russian 2 Report on Geotechnical Studies at the Tailings Pond of Plant PO Box 22 1965 No 64691 in Russian 3 Report on Topographic Geodetic and Geotechnical Studies at the Thennal Power Plant s Ash Impoundment 1976 No 15740 in Russian 4 Technical Report on Topographic Planning of the Thennal Power Plant s Ash Impoundment 1979 No *Treatment of Industrial Effluents* Mihir Kumar Purkait, Piyal Mondal, Chang-Tang Chang, 2019-09-06 To address the issue of discharge of untreated industrial effluent in the water body causing pollution adoption of cleaner production technologies and waste minimization initiatives are being encouraged The book explains each related technology elaborately and critically analyses the same from practical application point of view In depth characterization environmental and health effects and treatment of various industrial effluents are discussed with case studies Limitations challenges and remedial actions to be taken are included at the end of each chapter Chapters are arranged as per specific type of effluents from various industries like textile

Radioactive Waste Processing and Disposal U.S. Nuclear Regulatory Commission, U.S. Nuclear Regulatory Commission. Office of Nuclear Material Safety and Safeguards. Division of Waste Management and Environmental Protection, 1980 *Chemical Pretreatment of Nuclear Waste for Disposal* E.P. Horwitz, W.W. Schulz, 2012-12-06 Chemical pretreatment of nuclear wastes refers to the sequence of separations processes used to partition such wastes into a small volume of high level waste for deep geologic disposal and a larger volume of low level waste for disposal in a near surface facility Pretreatment of nuclear wastes now stored at several U S Department of Energy sites ranges from simple solid liquid separations to more complex chemical steps such as dissolution of sludges and removal of selected radionuclides e g ⁹⁰Sr ⁹⁹Tc ¹³⁷CS and TRU transuranium elements The driving force for development of chemical pretreatment processes for nuclear wastes is the economic advantage of waste minimization as reflected in lower costs for near surface disposal compared to the high cost of disposing of wastes in a deep geologic repository This latter theme is expertly and authoritatively discussed in the introductory paper by J and L Bell Seven papers in this volume describe several separations processes developed or being developed to pretreat the large volume of nuclear wastes stored at the US DOE Hanford and Savannah River sites These papers include descriptions of the type and amount of important nuclear wastes stored at the Hanford and Savannah River sites as well as presently envisioned strategies for their treatment and final disposal A paper by Strachan et al discusses chemical and radiolytic mechanisms for the formation and release of potentially explosive hydrogen gas in Tank 241 SY 101 at the Hanford site **Handbook of Membrane Separations** Anil K.
