Serial Rings:

    Serial Rings G. Puninski,2012-12-06 The main theme in classical ring theory is the structure theory of rings of a particular kind For example no one text book in ring theory could miss the Wedderburn Artin theorem which says that a ring R is semisimple Artinian iffR is isomorphic to a finite direct sum of full matrix rings over skew fields This is an example of a finiteness condition which at least historically has dominated in ring theory Ifwe would like to consider a requirement of a lattice theoretical type other than being Artinian or Noetherian the most natural is uni seriality Here a module M is called uni serial if its lattice of submodules is a chain and a ring R is uni serial if both RR and RR are uni serial modules The class of uni serial rings includes commutative valuation rings and closed under homomorphic images But it is not closed under direct sums nor with respect to Morita equivalence a matrix ring over a uni serial ring is not uni serial There is a class of rings which is very close to uni serial but closed under the constructions just mentioned serial rings A ring R is called serial if RR and RR is a direct sum necessarily finite of uni serial modules Amongst others this class includes triangular matrix rings over a skew field Also if F is a finite field of characteristic p and G is a finite group with a cyclic normal p Sylow subgroup then the group ring FG is serial   **Algebras, Rings and Modules** Michiel Hazewinkel,Nadiya Gubareni,V.V. Kirichenko,2006-01-18 Accosiative rings and algebras are very interesting algebraic structures In a strict sense the theory of algebras in particular noncommutative algebras originated fromasingleexample namelythequaternions createdbySirWilliamR Hamilton in1843 Thiswasthe rstexampleofanoncommutative numbersystem During thenextfortyyearsmathematiciansintroducedotherexamplesofnoncommutative algebras began to bring some order into them and to single out certain types of algebras for special attention Thus low dimensional algebras division algebras and commutative algebras were classi ed and characterized The rst complete results in the structure theory of associative algebras over the real and complex elds were obtained by T Molien E Cartan and G Frobenius Modern ring theory began when J H Wedderburn proved his celebrated cl si cation theorem for nite dimensional semisimple algebras over arbitrary elds Twenty years later E Artin proved a structure theorem for rings satisfying both the ascending and descending chain condition which generalized Wedderburn structure theorem The Wedderburn Artin theorem has since become a corn stone of noncommutative ring theory The purpose of this book is to introduce the subject of the structure theory of associative rings This book is addressed to a reader who wishes to learn this topic from the beginning to research level We have tried to write a self contained book which is intended to be a modern textbook on the structure theory of associative rings and related structures and will be accessible for independent study   *Handbook of Algebra* M. Anderson,Kent R. Fuller,2012-12-06 This book is intended to provide a reasonably self contained account of a major portion of the general theory of rings and modules suitable as a text for introductory and more advanced graduate courses We assume the famil iarity with rings usually acquired in standard undergraduate algebra courses Our general approach is categorical rather than arithmetical The continuing theme of the text is the study of the relationship between the one sided ideal structure that a ring may possess and the behavior of its categories of modules Following a brief outline of set theoretic and categorical foundations the text begins with the basic definitions and properties of rings modules and homomorphisms and ranges through comprehensive treatments of direct sums finiteness conditions the Wedderburn Artin Theorem the Jacobson radical the hom and tensor functions Morita equivalence and duality de composition theory of injective and projective modules and semi perfect and perfect rings In this second edition we have included a chapter containing many of the classical results on artinian rings that have hdped to form the foundation for much of the contemporary research on the representation theory of artinian rings and finite dimensional algebras Both to illustrate the text and to extend it we have included a substantial number of exercises covering a wide spectrum of difficulty There are of course many important areas of ring and module theory that the text does not touch upon Methods in Module Theory Abrams,1992-10-16 A collection of articles embodying the work presented at the 1991 Methods in Module Theory Conference at the University of Colorado at Colorado Springs facilitating the explanation and cross fertilization of new techniques that were developed to answer a

variety of module theoretic questions **Semilocal Categories and Modules with Semilocal Endomorphism Rings** Alberto Facchini,2019-10-23 This book collects and coherently presents the research that has been undertaken since the author s previous book Module Theory 1998 In addition to some of the key results since 1995 it also discusses the development of much of the supporting material In the twenty years following the publication of the Camps Dicks theorem the work of Facchini Herbera Shamsuddin Puninski Prihoda and others has established the study of serial modules and modules with semilocal endomorphism rings as one of the promising directions for module theoretic research Providing readers with insights into the directions in which the research in this field is moving as well as a better understanding of how it interacts with other research areas the book appeals to undergraduates and graduate students as well as researchers interested in algebra **Methods in Ring Theory** Freddy Van Oystaeyen,2012-12-06 Proceedings of the NATO Advanced Study Institute Antwerp Belgium August 2 12 1983
