The Marine Biology of the South China Sea III Brian Morton, 1998-07-01 The first conference on the Marine Biology of the South China Sea was convened in Hong Kong in 1990 to celebrate the opening of the Swire Institute of Marine Science The second was convened in Guangzhou China in 1993 The third conference returned to Hong Kong in 1996 and in a continuing pattern of growth was attended by 127 scientists and students from 14 countries and territories Of the 104 keynote addresses papers and posters presented at the meeting 42 are published here following critical peer review under the symposium categories of Taxonomy and Biological Diversity Biology and Ecology and Coastal Zone Management and Conservation of the Biological Resources of the South China Sea Each conference sets its own symposia themes but in view of the rapid perceived decline in the marine environment of the South China Sea and the overexploitation of its resources the 1996 meeting focused its attention on these issues There are many meetings related to marine science convened by the countries of the South China rim Some are national others are international but most are typically convened by agencies and attendance is restricted to an invited few usually senior scientists Europe hosts a European Marine Biology Symposium that is convened in a different country each year and which sets the meeting s themes The proceedings of those meetings constitute one of the most authoritative accounts of the marine biology of European

waters The meeting itself provides a forum for scientists and students so that international collaborative research is now a key feature of European marine science First convened in 1996 the 32 symposia are a tribute to international co operation in research in a marine environment that of itself knows no boundaries The South China Sea countries also need such a forum free of political dogma This conference proceedings is the third to help promote such an event hopefully one day at a greater frequency than three years The fourth conference is to be convened in the Philippines in 1999 This volume then is an international perspective on the South China Sea by scientists who research it and are concerned for its future It contains information that should appeal to marine biologists throughout the world and in particular to those in Asia **The Sea**

may shed lights on mechanisms promoting immunity developmental biology regeneration and budding processes in marine invertebrates body maintenance aging and senescence It aims in encouraging a larger scientific community to follow and study the novel phenomena of stem cells behaviours as depicted from the few currently studied marine invertebrates

an extremely favorable material for biochemists and molecular embryologists It is not surprising that in view of these exceptional advantages sea urchin eggs have attracted the interest of innumerable biologists since O HERTWIG discovered the fusion of the pronuclei amphimixy in *Paracentrotus lividus* almost a century ago The purpose of the present book is to present in a complete and orderly fashion the enormous amount of information which has been gathered in the course of a hundred years of sea urchin embryology JOSEPH NEEDHAM in 1930 was still able to present all that was known at that time on the biochemistry of all possible species of developing eggs and embryos in his famous *Chemical Embryology* Cambridge University Press It would no longer be possible for one man to write a modern version of what was a Bible for the young embryologists of forty years ago *Plasticity and Regeneration of the Nervous System* Paola S.
