Shadow Clock:

Shadow Clock Brian A. Massey, 2002-04-11 In this story of redemptive suffering Sheriff's Detective Cade Ribault goes up against a case that breaks his heart and a crippling illness that threatens to kill him. Shadows of corruption gather as surely as darkness falls on the face of a sundial and Cade is running out of time. Set in Myrtle Beach, South Carolina, *Shadow Clock* brings the elements of Greek tragedy to the Grand Strand. The novel is at once a steamy Southern noir, a detective thriller, and a portrait of a wounded man's quest to survive in a murderous world. *Sticks, Stones, and Shadows* Martin Isler, 2001 What do the pyramids of Egypt really represent? What could have driven so many to so great and often so dangerous an effort? Was the motivation religious or practical? Illustrated with more than 300 photographs and drawings, this book presents an original approach to the subject of pyramid building. It reveals the connection between devices that served both a practical need for survival and a spiritual belief in gods and goddesses. It examines Egyptian technologies and techniques from the origins of pyramid development to the step-by-step details of how the ground was leveled, how the site was oriented, and how the stone was raised and placed to meet at a distant point in the sky. Here the author also asks and answers questions virtually ignored for the last century. He discloses, for example, the ancient use of shadows, now denigrated to the ornamental back yard sundial, but once an important tool for telling the height of an object, geographical directions, the seasons of the year, and the time of day. He also reinterprets the ancient stretching of the cord ceremony, which once was thought to have only religious significance, but here is shown as the means of establishing the sides of a pyramid. *Ancient Egyptian Science* Marshall Clagett, 1989 Marshall Clagett's three-volume study of various aspects of science of Ancient Egypt. Volume 1 concentrates on the origin and development of hieroglyphic writing, the scribal profession, and quasi-learned institutions in ancient Egypt. Professor Clagett has paid particular attention to the so-called Palermo Stone, the earliest annals composed in Egypt. Volume 2 covers calendars, clocks, and astronomical monuments. Volume 3 gives a discourse on the nature and accomplishments of Egyptian mathematics and also informs the reader as to how our knowledge of Egyptian mathematics has grown since the publication of the Rhind Mathematical Papyrus toward the end of the 19th century. **Simple Experiments in Time** Muriel Mandell, 2007 What makes time tick? With these dozens of experiments, budding scientists will happily pass the hours investigating all its wonders. They'll learn how to tell time using the sun, moon, and stars; make their own hourglass and candle timekeeper; and learn how clocks and watches operate. Fun-filled activities include creating a model of the International Date Line and constructing a cereal box planetarium, plus there are intriguing answers to such questions as whether we'll ever be able to travel through time. *Discoveries* Katherine Cuthbert, 1998 *Rhythm in the Sky* Gautam Gangopadhyay, Anirban Kundu, 2024-05-21 This book provides a brief and pedagogic introduction to a variety of topics with a common motif: that they all occur in some way or other in the sky and involve some sort of rhythm. Sky is not just the inside of a dome; there are many strata, each with its own beauties and mysteries. As we go up, the atmosphere thins out and ends, and we move into the space.

into the realms of planets asteroids and comets and even further beyond the solar system into the vast Milky Way galaxy This is where the night sky comes in with all its twinkling stars the stars in our own galaxy We must use telescopes to explore further In this book we will start from the ancient astronomers and how they studied the motion of earth through space Study of planetary orbits from Kepler and Newton to Einstein had been fascinating We will try to take the reader through the wonderful worlds of the cepheid variables and pulsars to the strange oscillations of the neutrinos and the new eye to look at the universe namely the gravitational waves The book stops at the discovery of the black hole at the center of our galaxy but that is just because we must stop somewhere or the assortment could go on ad infinitum Some of these topics are highly mathematical in nature but we will try to avoid the complicated mathematics as much as possible without compromising with the rigor
