Shadow Rider Gina L. Dartt, 2024-09-10 The world of the Five Nations is ruled by Elementals, those chosen few capable of controlling earth, air, fire, and water, but it is the Paths of the Shadow Realm that link the nations. Navigated by the mysterious Shadow Riders, Courier Shay Kendrith carries precious goods and crucial documents for the Crown, a solitary and dangerous life that takes her from one end of the world to the other. The last thing she ever expected to discover while traveling the Realm is an Elemental fighting for her life against the deadly wraiths inhabiting the Shadows. As an Undine, Marshal Keagan Riley wields water, using her abilities to protect and serve the Crown. Being drawn into the Shadow Realm with Shay begins a harrowing journey that will lead them to the Elemental Stones, previously lost to history but uncovered by unknown forces that may destroy everything they've sworn to protect. In the Shadows, one can easily find death, but can Shay and Keagan find love as they fight to save the Five Nations?

Celestial Shadows John Westfall, William Sheehan, 2014-11-19 Much of what is known about the universe came from the study of celestial shadows. This book looks in detail at the way eclipses and other celestial shadows have given us amazing insights into the nature of the objects in our solar system and how they are even helping us discover and analyze planets that orbit stars other than our Sun. A variety of eclipses, transits, and occultations of the moons of Jupiter and Saturn, Pluto, and its satellite Charon, asteroids, and stars have helped astronomers to work out their dimensions, structures, and shapes, even the existence of atmospheres and structures of exoplanets. Long before Columbus set out to reach the Far East by sailing West,

the curved shadow of the Earth on the Moon during a lunar eclipse revealed that we inhabit a round world a globe More recently comparisons of the sunlit and Earthlit parts of the Moon have been used to determine changes in the Earth's brightness as a way of monitoring possible effects in cloud coverage which may be related to global warming Shadows were used by the Greek mathematician Eratosthenes to work out the first estimate of the circumference of the Earth by Galileo to measure the heights of the lunar mountains and by eighteenth century astronomers to determine the scale of the Solar System itself Some of the rarest and most wonderful shadows of all are those cast onto Earth by the lovely Evening Star Venus as it goes between the Earth and the Sun These majestic transits of Venus occur at most two in a century after the 2012 transit there is not a chance to observe this phenomenon until 2117 while the more common sweep of a total solar eclipse creates one of the most dramatic and awe inspiring events of nature Though it may have once been a source of consternation or dread solar eclipses now lead thousands of amateur astronomers and eclipse chasers to travel the globe in order to experience the dramatic view under totality These phenomena are among the most spectacular available to observers and are given their full due in Westfall and Sheehan's comprehensive study *Representation Theory* Amritanshu Prasad, 2015-02-05 This book discusses the representation theory of symmetric groups the theory of symmetric functions and the polynomial representation theory of general linear groups The first chapter provides a detailed account of necessary representation theoretic background An important highlight of this book is an innovative treatment of the Robinson-Schensted-Knuth correspondence and its dual by extending Viennot's geometric ideas Another unique feature is an exposition of the relationship between these correspondences the representation theory of symmetric groups and alternating groups and the theory of symmetric functions Schur algebras are introduced very naturally as algebras of distributions on general linear groups The treatment of Schur-Weyl duality reveals the directness and simplicity of Schur's original treatment of the subject In addition each exercise is assigned a difficulty level to test readers' learning Solutions and hints to most of the exercises are provided at the end

Algorithms - ESA 2006 Yossi Azar, Thomas Erlebach, 2006-09-12 This book constitutes the refereed proceedings of the 14th Annual European Symposium on Algorithms ESA 2006 held in Zurich Switzerland in the context of the combined conference ALGO 2006 The book presents 70 revised full papers together with abstracts of 3 invited lectures The papers address all current subjects in algorithmics reaching from design and analysis issues of algorithms over to real world applications and engineering of algorithms in various fields

Mobile Agents: Control Algorithms Joachim Baumann, 2006-12-31 In this monograph Joachim Baumann provides in depth coverage of essential research issues namely mechanisms for locating and terminating mobile agents and for orphan detection in a mobile agent system The reader will gain insights into the design and implementation of three control mechanisms for use in mobile agent systems the energy concept the path concept and the shadow concept The author examines these mechanisms and offers a solid argument as to why they would be better choices over existing mechanisms with respect to message complexity migration delay and
