Hausser,2006-09-28 Everyday life would be easier if we could simply talk with machines instead of having to program them Before such talking robots can be built however there must be a theory of how communicating with natural language works This requires not only a grammatical analysis of the language signs but also a model of the cognitive agent with interfaces for recognition and action an internal database and an algorithm for reading content in and out In Database Semantics these ingredients are used for

reconstructing natural language communication as a mechanism for transferring content from the database of the speaker to the database of the hearer Part I of this book presents a high level description of an artificial agent which humans can freely communicate with in their accustomed language Part II analyzes the major constructions of natural language i e intra and extrapositional functor argument structure coordination and coreference in the speaker and the hearer mode Part III defines declarative specifications for fragments of English which are used for an implementation in Java The book provides researchers graduate students and software engineers with a functional framework for the theoretical analysis of natural language communication and for all practical applications of natural language processing

*Nature's Sublime* Robert S. Corrington,2013-03-14 Nature s Sublime uses a radical new form of phenomenology to probe into the deepest traits of the human process in its individual social religious and aesthetic dimensions Starting with the selving process the essay describes the role of signs and symbols in intra and interpersonal communication At the heart of the human use of signs is a creative tension between religious symbols and the novel symbols created in the various arts A contrast is made between natural communities which flatten out and reject novel forms of semiosis and communities of interpretation which welcomes creative and enriched signs and symbols The normative claim is made that religious sign symbol systems have a tendency toward tribalism and violence while the various spheres of the aesthetic are comparatively non tribal or even deliberately anti tribal The concept experience of beauty and the sublime is meant to replace that of religious revelation The sublime is not merely an internal mode of attunement contra Kant but comes from the very depths of nature in the potencies of nature naturing
