Bioterrorism--domestic Weapons of Mass Destruction United States. Congress. Senate. Committee on Appropriations. Subcommittee on Departments of Labor, Health and Human Services, Education, and Related Agencies, 2000 *Medical Response to Terror Threats* Aaron Richman, Shmuel C. Shapira, Yair Sharan, 2010 We do not automatically associate the practice of medicine with al Qaeda or weapons of mass destruction, yet medical practitioners increasingly play their part in the war against terrorism. Called to risk their own lives in order to help others, they are always among those first responders who must overcome their natural instinct to get away and instead rush to the scene of any fresh terror attack to offer what aid they can to the victims. The successful medical response to terror threats requires regular training and accurate information. This book is one product of the NATO workshop Terror Medicine held in Jerusalem in 2008. The twelve chapters were written by the subject matter experts who led this workshop, and topics covered include assessment of medical threats in various types of terrorist attack; the special medical threat of suicide bombings; the unique epidemiology of terrorist attacks; management of terror-related mass casualty events; MCE analysis of case studies and best practices as well as lessons learned; and standard operating protocol (SOP) expertise. Reflecting multiple lifetimes worth of experience and research, and providing expert analysis to the professionals who must respond to the hazards, threats, and injuries caused by terrorism, this book is an important addition to the resources of those who continue to fight global terrorism with their medical skills, as well as being of interest to all who support them in that fight. **Terrorism and Medical Responses: U.S. Lessons and Policy**

Terrorism, Asymmetric Warfare, and Weapons of Mass Destruction Anthony H. Cordesman, 2001-11-30 There is a wide spectrum of potential threats to the U S homeland that do not involve overt attacks by states using long range missiles or conventional military forces Such threats include covert attacks by state actors state use of proxies independent terrorist and extremist attacks by foreign groups or individuals and independent terrorist and extremist attacks by residents of the United States These threats are currently limited in scope and frequency but are emerging as potentially significant issues for future U S security In this comprehensive work Cordesman argues that new threats require new thinking and offers a range of recommendations from expanding the understanding of what constitutes a threat and bolstering Homeland defense measures to bettering resource allocation and improving intelligence gathering and analysis No pattern of actual attacks on U S territory has yet emerged that provides a clear basis for predicting how serious any given form of attack might be in the future what means of attack might be used or how lethal new forms of attack might be As a result there is a major ongoing debate over the seriousness of the threat and how the U S government should react This work is an invaluable contribution to that debate *A Review of Federal Bioterrorism Preparedness Programs from a Public Health Perspective* United States.
