Race, Evolution, and Behavior J. Philippe Rushton, 2000 *Race, Evolution, and Behavior* J. Rushton, 2013-07-28 New edition A masterpiece of modern racial science grounded in irrefutable fact Testing for racial differences in behavior has been much neglected over the past sixty years And when not subject to neglect to strongly negative imputations among professionals and politicians alike According to J Philippe Rushton substantial racial differences do exist and their pattern can only be explained adequately from an evolutionary perspective In this book the author reviews international data and finds a distinct pattern People of East Asian ancestry and people of African ancestry are at opposite ends of a continuum with people of European ancestry intermediate albeit with much variability within each broad grouping Rushton s thesis is that when fully modern humans migrated out of Africa perhaps only 100 000 years ago the colder Eurasian climate selected for larger brains more forward planning greater family stability and increased longevity with concomitant reductions in sex hormone speed of maturation reproductive potency and aggressiveness Rushton s theory emphasizes a trade off between parenting and mating and brings into focus the concept of a coordinated life history of characteristics evolving together to replicate genes more effectively The selection for large brains and parenting skills was taken furthest in east Asia Rushton s theory explains differentiation in intelligence and predicts other seemingly unrelated race effects such as differences in frequency of twinning The capacity to unify disparate phenomena is usually considered a virtue in theories Rushton s gene based evolutionary models explain ethnocentrism and racial group differences and may provide a catalyst for understanding individual differences and human nature This volume is sure to be controversial as Rushton attempts nothing less than a paradigmatic change in the way social scientists approach their work especially those concentrated in the study of racial differences *Race Evolution and Behavior* must be read by sociologists anthropologists and black studies specialists

Interdisciplinary Perspectives on Colorism Ronald E. Hall, 2022-07-22 This timely and unique book explores the concept of colorism which is discrimination based on the color of a person s skin in a world where arguably light skin is privileged over dark and one s wealth health and opportunities are impacted by skin color sometimes irrespective of one s racial background In the context of our multi cultural and increasingly global society and the historical backdrop of slavery the text takes a unique approach by moving from personal anecdotes to adopting a scientific perspective grounded in empirical evidence Hall explores how skin color is a more effective framework for examining prejudice and discrimination as racial identities become increasingly mixed due to inter racial unions and immigration He argues that racism as discrimination by race is contrived polarizing and non quantifiable and that it is often skin color that is used to identify race often inaccurately With skin color being a visual and physical characteristic with race based prejudices attached to it the author shows how skin color can be a loaded identifier of value and identity In a world where the objective measure of skin color crosses racial boundaries and where race will become increasingly indiscernible over time the ultimate aim of this book is to prepare for the social future of mankind that has already begun to take shape Split into three parts examining historical contemporary and potential future perspectives on colorism this is fascinating reading for students and academics in psychology social work education criminal justice and other social sciences The text will also be useful for providing validation for including colorism into the public domain
