Frisby, 2025-03-25 Thorough overview of the history viewpoints and research findings of bias in intelligence testing Essentials of Evaluating Bias in Intelligence Testing delivers a comprehensive overview of potential biases that can come to light when making use of IQ tests across demographics detailing where bias can work its way into IQ test selection standardization content administration scoring and interpretation and providing key foundational knowledge on what IQ test bias is versus what it is not as well as the history of bias claims in recent decades Research findings are included throughout the book to provide key context Some of the topics discussed in this book include The Larry P v Wilson Riles trial decision of 1979 which prohibited the use of IQ

tests for placing Black students in special education programs and its carryover to today The heritability of IQ scores the nature nurture issue and the role of IQ in the stratification of subpopulation groups in society Implicit assumptions within claims of standardization bias including that all population subgroups must display equal mean scores and that racial ethnic groups are internally homogeneous Essentials of Evaluating Bias in Intelligence Testing is an essential read for educators academics and administrators seeking to understand the full picture on IQ testing and its validity or lack thereof across different demographics

Race and Intelligence Jefferson M. Fish, 2013-05-13 In recent years reported racial disparities in IQ scores have been the subject of raging debates in the behavioral and social sciences and education What can be made of these test results in the context of current scientific knowledge about human evolution and cognition Unfortunately discussion of these issues has tended to generate more heat than light Now the distinguished authors of this book offer powerful new illumination Representing a range of disciplines psychology anthropology biology economics history philosophy sociology and statistics the authors review the concept of race and then the concept of intelligence Presenting a wide range of findings they put the experience of the United States so frequently the only focus of attention in global perspective They also show that the human species has no races in the biological sense though cultures have a variety of folk concepts of race that there is no single form of intelligence and that formal education helps individuals to develop a variety of cognitive abilities *Race and Intelligence* offers the most comprehensive and definitive response thus far to claims of innate differences in intelligence among races

Who Benefits From Special Education? Ellen A. Brantlinger, 2006-08-15 Who Benefits From Special Education Remediating Fixing Other People's Children addresses the negative consequences of labeling and separating education for students with disabilities the cultural biases inherent in the way that we view children's learning difficulties the social construction of disability the commercialization of special education and related issues The theme that unifies the chapters is that tension exists between professional ideology and practice and the wishes and expectations of the recipients of professional practice children adolescents and adults with disabilities and their families These voices have rarely taken center stage in formulating important decisions about the quality and characteristics of appropriate practice The dominant view in the field of special education has been that disability is a problem in certain children rather than an artifact that results from the general structure of schooling it does not take into consideration the voices of people with disabilities their families or their teachers Offering an alternative perspective this book deconstructs mainstream special education ideologies and highlights the personal perspectives of students families and front line professionals such as teachers and mental health personnel It is particularly relevant for special education disabilities studies graduate students and faculty and for readers in general education curriculum studies instruction theory and critical theory

Human Abilities in Cultural Context S. H. Irvine, John W. Berry, 1988-09-30 Originally published in 1988 Human Abilities in Cultural Context constituted a major development in conceptualising and studying human abilities It formed a unique reference frame This study offers a re-evaluation of ability theory by the editors S H Irvine and J W Berry and strong individual statements by H J Eysenck Arthur R Jensen Joseph R Royce and Robert J Sternberg who represent markedly different approaches to the measurement of intelligence It also focuses on contexts in which the limits of assessment by psychological tests are defined in minority native groups in North America in migrants to Britain in lower caste enclaves in India among African minorities and among Australian Aborigines Written by long term residents of the regions in question these chapters presented a wealth of fresh data in relation to Western formulations of theory and practice

'Gifted Children' in Britain and the World Jennifer Crane, 2025-02-13 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read on Oxford Academic and offered as a free PDF download from OUP and selected open access locations The idea that a child is intellectually gifted has a social and cultural history This book analyses that social history at multiple scales and makes the voices of the gifted young themselves central through examination of their poetry letters and life writing In daily encounters those labelled gifted sometimes loved this label and felt special in comparison to peers at school and siblings at home For others gifted was a silly or embarrassing label and many questioned the idea of separating off young people in terms of intelligence as well as the specific forms of testing being used Ideas of the gifted child also reshaped family lives parents dedicated time to providing

special leisure spaces for those thought of as gifted running them in their own homes and taking their children significant distances to spend time with others that were also gifted Voluntary organisations were critical here as the network through which young people and adults encountered the term gifted and lived and created it relationally through interactions with one another Voluntary organisations looking to gain attention and visibility also critically shaped the idea that the gifted young were elites of the future central to answering challenges of economic decline global warfare or humanitarian aid The hopes placed on gifted children between the 1960s and the 1990s were often sky high yet many gifted young still felt that the community wasted their talents and did not support them This book then provides new perspectives on the tensions between elitism and equality in modern Britain It also offers vivid stories of optimism hope disappointment and criticism in which young people themselves play a central role
