*Racing to the beginning of the road* Robert A. Weinberg, 1997      *Racing to the Beginning of the Road* Robert A. Weinberg, 1999-01-01      *Making Cancer History* James S. Olson, 2009-05-18 The history of the M D Anderson Cancer Center vividly reveals how cancer treatment in America and our attitudes toward the disease has changed since the middle of the twentieth century One of the preeminent cancer centers in the world M D Anderson is also one of the first medical institutions devoted exclusively to caring for people with cancer and researching treatments and cures for the disease Historian James S Olson s narrative relates the story of the center s founding and of the surgeons radiologists radiotherapists nurses medical oncologists scientists administrators and patients who built M D Anderson into the world class institution it is today Through interviews with M D Anderson s leaders and patients Olson brings to life the struggle to understand and treat cancer in America A cancer survivor who has himself been treated at the center Olson imbues this history with humor passion and humanity      *The \$800 Million Pill* Merrill Goozner, 2005-10-10 Goozner shows how drug innovation is driven by dedicated scientists intent on finding cures for diseases not by pharmaceutical firms whose bottom line often takes precedence over the advance of medicine Stories of a university biochemist who spent twenty years searching for single blood protein that later became the best selling biotech drug in the world a government employee who discovered the causes for dozens of crippling genetic disorders and the Department of Energy funded research that made the Human Genome Project possible these accounts illustrate how medical breakthroughs actually take place      *Her-2* Robert Bazell, 2011-04-27 Two years after she underwent a mastectomy and chemotherapy Barbara Bradfield s aggressive breast cancer had recurred and spread to her lungs The outlook was grim Then she took part in Genentech s clinical trials for a new drug Five years later she remains cancer free *Her 2* is the biography of Herceptin the drug that provoked dramatic responses in Barbara Bradfield and other women in the trials and that offers promise for hundreds of thousands of breast cancer patients Unlike chemotherapy or radiation Herceptin has no disabling side effects It works by inactivating Her 2 neu a protein that makes cancer cells grow especially quickly produced by a gene found in 25 to 30 percent of all breast tumors Herceptin caused some patients cancers to disappear completely in others it slowed the progression of the disease and gave the women months or years they wouldn t otherwise have had Herceptin is the first treatment targeted at a gene defect that gives rise to cancer It marks the beginning of a new era of treatment for all kinds of cancers Robert Bazell presents a riveting account of how Herceptin was born *Her 2* is a story of dramatic discoveries and strong personalities showing the combination of scientific investigation money politics ego corporate decisions patient activism and luck involved in moving this groundbreaking drug from the lab to a patient s bedside Bazell s deft portraits introduce us to the remarkable people instrumental in Herceptin s history including Dr Dennis Slamon the driven UCLA oncologist who played the primary role in developing the treatment Lily Tartikoff wife of television executive Brandon Tartikoff who tapped into Hollywood money and glamour to help fund Slamon s

research and Marti Nelson who inspired the activists who lobbied for a compassionate use program that would allow women outside the clinical trials to have access to the limited supplies of Herceptin prior to FDA approval of the drug And throughout there are the stories of the heroic women with advanced breast cancer who volunteered for the trials risking what time they had left on an unproven treatment Meticulously researched written with clarity and compassion Her 2 is masterly reporting on cutting edge science In Search of Memory: The Emergence of a New Science of Mind Eric R. Kandel,2007-03-17 A stunning book Oliver Sacks Memory binds our mental life together We are who we are in large part because of what we learn and remember But how does the brain create memories Nobel Prize winner Eric R Kandel intertwines the intellectual history of the powerful new science of the mind a combination of cognitive psychology neuroscience and molecular biology with his own personal quest to understand memory A deft mixture of memoir and history modern biology and behavior In Search of Memory brings readers from Kandel s childhood in Nazi occupied Vienna to the forefront of one of the great scientific endeavors of the twentieth century the search for the biological basis of memory

**Materials Matter** Ken Geiser,2001-05-25 The products we purchase and use are assembled from a wide range of naturally occurring and manufactured materials But too often we create hazards for the ecosystem and human health as we mine process distribute use and dispose of these materials Until recently most research has focused on the waste end of material cycles This book argues that the safest and least costly point at which to avoid environmental damage is when materials are first designed and selected for use in industrial production Materials Matter presents convincing evidence that we can use fewer materials and eliminate the use of many toxic chemicals by focusing directly on material chemical use when products are designed It also shows how manufacturers can save money by increasing the effectiveness of material use and reducing the use of toxic chemicals It advocates new directions for the material sciences and government policies on materials And it argues that manufacturers suppliers and customers need to set more socially responsible policies for products and services to achieve higher environmental and health goals *How Scientists Explain Disease* Paul

Thagard,2018-06-05 How do scientists develop new explanations of disease How do those explanations become accepted as true And how does medical diagnosis change when physicians are confronted with new scientific evidence These are some of the questions that Paul Thagard pursues in this pathbreaking book that develops a new integrative approach to the study of science Ranging through the history of medicine from the Hippocratic theory of humors to modern explanations of Mad Cow Disease and chronic fatigue syndrome Thagard analyzes the development and acceptance of scientific ideas At the heart of the book is a case study of the recent dramatic shift in medical understanding of peptic ulcers most of which are now believed to be caused by infection by the bacterium *Helicobacter pylori* When this explanation was first proposed in 1983 it was greeted with intense skepticism by most medical experts but it became widely accepted over the next decade Thagard discusses the psychological processes of discovery and acceptance the physical processes involving instruments and

experiments and the social processes of collaboration communication and consensus that brought about this transformation in medical knowledge

**How Scientists Explain Disease** challenges both traditional philosophy of science which has viewed science as largely a matter of logic and contemporary science studies that view science as largely a matter of power Drawing on theories of distributed computing and artificial intelligence Paul Thagard develops new models that make sense of scientific change as a complex system of cognitive social and physical interactions This is a book that will appeal to all readers with an interest in the development of science and medicine It combines an engaging style significant research and a powerfully original argument

*Politically Incorrect Guide to Science* Tom Bethell, 2005-11-25 If the globe is warming is mankind responsible or is the sun Such a statement does not appear out of place in Bethell's entertaining account of how modern science is politically motivated and in desperate need of oversight Bethell writes in a compulsively readable style and although he provides legitimate insight into the potential benefits of nuclear power and hormesis some readers will be turned off when he attempts to disprove global warming and especially evolution Throughout the book Bethell makes questionable claims about subjects as varied as AIDS careful U S studies had already shown that at least a thousand sexual contacts are needed to achieve heterosexual transmission of the virus and extinction It is not possible definitely to attribute any given extinction to human activity and backs up his arguments with references to the music magazine SPIN and thriller writer Michael Crichton Ironically Bethell ends up proving his own premise by producing a highly politicized account of how liberal intellectuals and unchecked government agencies have created a white coated priesthood whose lust for grant money has driven them to produce fearsome but in Bethell's view false tales of ozone destruction and AIDS pandemics In the end this book is unlikely to sway readers who aren't already in Bethell's ideological camp as any points worthy of discussion get lost in the glut of unsourced claims that populate this latest installment of The Politically Incorrect Guide series

The Truth in Small Doses Clifton Leaf,2014-08-05 A decade ago Leaf a cancer survivor himself began to investigate why we had made such limited progress fighting this terrifying disease The result is a gripping narrative that reveals why the public s immense investment in research has been badly misspent why scientists seldom collaborate and share their data why new drugs are so expensive yet routinely fail and why our best hope for progress brilliant young scientists are now abandoning the search for a cure

**Greedy Science** Michael D. Gordin,W. Patrick McCray,2025-02-18 On the transformative role of greed in global science and technology during the 1980s In the 1980s a transformative era emerged where profit driven motives and an entrepreneurial spirit dominated scientific research and technological innovation This collection of essays edited by Michael D Gordin and W Patrick McCray examines how greed reshaped the global scientific community through the relentless pursuit of money fame and celebrity Profiting off science and technology was not a new phenomenon nor were the soaring ambitions of some of its most fervent advocates However the global currents of knowledge production in the 1980s saw major cultural and scientific shifts the increasing frequency of university patenting the rise of academic entrepreneurship and collaborations between industries and academia for example Greedy Science seeks to survey and understand the full range of these changes Through insightful essays contributors examine case studies ranging from the biotech boom driven by early oil firm investments to the speculative market strategies in personal computing and alternative energy This period saw the rise of the celebrity status of scientists and raised questions about the moral complexities of scientific greed The authors argue that greed was an ever present and expansive trait of science during this time encompassing a host of behaviors such as covetousness acquisitiveness rapaciousness and conspicuous consumption Greedy Science provides a nuanced analysis of how market dynamics and the quest for personal gain profoundly influenced scientific advancements and public perception during a pivotal decade in science and technology

**The Journey Through Cancer** Dr. Jeremy Geffen,2007-12-18 The Journey Through Cancer is an essential guide for all cancer patients their families and their loved ones As a board certified oncologist with more than ten years of experience serving as physician guide mentor coach and

friend to thousands of cancer patients and their families Dr Jeremy Geffen has learned how cancer often challenges the mind heart and spirit of patients and their families as deeply if not more deeply than it challenges the physical body Yet this simple truth is often overlooked by Western medicine as it aggressively pursues the best ways to diagnose and treat cancer Too often physicians focus almost exclusively on the physical dimensions of the disease rather than caring for the whole person who has the disease Dr Geffen presents a groundbreaking seven level program used at his cancer center in Florida that addresses every dimension of the person with cancer physical mental emotional and spiritual Education and Information giving patients answers to questions about their disease and their treatment options Psychosocial Support focusing on the need for and benefits of a strong support network The Body as Garden exploring the vast array of alternative and complementary therapies Emotional Healing helping patients and families deal with the often overwhelming emotional challenges of cancer The Nature of Mind exploring how patients thoughts and beliefs profoundly influence their journey Life Assessment showing patients how to discover their life s deepest meaning and purpose The Nature of Spirit connecting patients to the profoundly healing spiritual aspect of life we all share In The Journey Through Cancer Dr Geffen presents a revolutionary model of healing based on the best treatments available from every culture and paradigm of medicine one that respects and explores every possible avenue and resource for healing and transformation blending East and West body and mind heart and technology science and spirit
